

EXPLANATION

MINERAL

- WITHDRAWN LANDS
- [Symbol] Lands withdrawn pending classification for coal
 - [Symbol] Lands withdrawn pending classification for coal and phosphate
 - [Symbol] Lands withdrawn for oil shale
 - [Symbol] Lands withdrawn pending classification for phosphate
 - [Symbol] Naval Oil Shale Reserve
 - [Symbol] Naval Petroleum Reserve

CLASSIFIED LANDS

- [Symbol] Coal
- [Symbol] Phosphate
- [Symbol] Sodium

LANDS VALUABLE PROSPECTIVELY FOR RETENTION OF FEDERAL MINERAL RIGHTS
(Inchures, where present, are on valuable side of boundaries.)

- [Symbol] Asphaltic materials
- [Symbol] Coal
- [Symbol] Geothermal resources
- [Symbol] Oil and gas
- [Symbol] Phosphate
- [Symbol] Potassium
- [Symbol] Sodium

KNOWN LEASING AREAS
(In-filled and undefined)

- [Symbol] Known geologic structure of producing oil and gas fields
- [Symbol] Known geothermal resources area
- [Symbol] Known coal leasing area
- [Symbol] Known oil shale leasing area
- [Symbol] Known phosphate leasing area
- [Symbol] Known potassium leasing area
- [Symbol] Known sodium leasing area

Symbols show reported locations of mines, prospects, and occurrences of selected minerals. Inactive mines are not distinguished, nor is the size or grade of the mineral occurrence indicated. Each mineral occurrence is located to the nearest 40-acre tract within a section. Multiple occurrences of the same mineral within a quarter are not differentiated from a single occurrence. Several different minerals at the same locality are shown by symbols in parenthesis with a leader and dot.

Beryllium, tungsten, and columbium-tantalum at the same locality
 Certain symbols such as those for gold, silver, copper, lead, zinc, tungsten, and molybdenum; chromium, cobalt, nickel, and platinum; and uranium and vanadium may be combined in a single symbol to show several different minerals at the same locality. Examples of combined symbols are:
 Copper, gold, lead, and zinc Chromium, cobalt, and nickel Uranium and vanadium

Areas of numerous or widespread occurrences of one or more minerals are shown by a dotted outline. Symbols are shown inside the outlined area or by a leader. An isolated occurrence of a different mineral within such an area is shown by a dot and a leader. Examples are:
 Bentonite occurs throughout area Local occurrence of fluorapatite at dot within an area of widespread occurrence of beryllium, tungsten, and columbium-tantalum

METALS		NONMETALS	
[Symbol] Aluminum	[Symbol] Titaniumiferous iron	[Symbol] Fuller's earth	[Symbol] Gen and ornamental stones
[Symbol] Antimony	[Symbol] Tungsten	[Symbol] Graphite	[Symbol] Gypsum
[Symbol] Arsenic	[Symbol] Uranium	[Symbol] Helium	[Symbol] Iodine
[Symbol] Beryllium	[Symbol] Vanadium	[Symbol] Kaolin	[Symbol] Kyanite group
[Symbol] Bismuth	[Symbol] Zinc	[Symbol] Limestone	[Symbol] Lithium minerals
[Symbol] Cadmium	[Symbol] Zirconium and Hafnium	[Symbol] Magnesite	[Symbol] Magnesite
[Symbol] Cesium and Rubidium		[Symbol] Magnesium sulfate	[Symbol] Heerschaum
[Symbol] Chromium		[Symbol] Mica	[Symbol] Mineral pigments
[Symbol] Cobalt		[Symbol] Serpentine	[Symbol] Sphalite
[Symbol] Columbium and Tantalum		[Symbol] Silica sand	[Symbol] Olivine
[Symbol] Copper		[Symbol] Strontium minerals	[Symbol] Quartz
[Symbol] Germanium		[Symbol] Sulphur	[Symbol] Serpentine
[Symbol] Gold		[Symbol] Talc, Soapstone	[Symbol] Silica sand
[Symbol] Iron		[Symbol] Volcanic ash, Pumice, Perlite	[Symbol] Vermiculite
[Symbol] Lead		[Symbol] Fluorspar	[Symbol] Wollastonite
[Symbol] Manganese			
[Symbol] Mercury			
[Symbol] Molybdenum			
[Symbol] Nickel			
[Symbol] Platinum group			
[Symbol] Rare earths			
[Symbol] Silver			
[Symbol] Selenium			
[Symbol] Tellurium			
[Symbol] Thorium			
[Symbol] Tin			

WATER

- [Symbol] Lands classified or withdrawn for waterpower or reservoir sites

U. S. Geological Survey
OPEN FILE REPORT
This report is preliminary and has not been edited or reviewed for conformity with Geological Survey standards or nomenclature.

LEASABLE MINERAL AND WATERPOWER LAND CLASSIFICATION MAP
SHERIDAN QUADRANGLE, WYOMING, MONTANA

SHOWING
LANDS WITHDRAWN, CLASSIFIED, AND VALUABLE PROSPECTIVELY FOR LEASABLE MINERALS
AND OCCURRENCES OF OTHER SELECTED MINERALS
LANDS WITHDRAWN OR CLASSIFIED FOR WATERPOWER AND RESERVOIR SITES
Compiled by Andrew F. Bateman, Jr., Elizabeth G. Allen, and George S. Yamamoto

1974

Not all classification categories or mineral occurrences shown in the explanation are present in this quadrangle. Categories shown apply only to any public lands included within boundaries. The leasable minerals in public domain lands named in the various mineral leasing acts as amended over the years are coal, oil, gas, and oil shale; phosphates, or phosphate rock; chlorides, sulfates, carbonates, borates, silicates or nitrates of potassium and of sodium; sulphur in Louisiana and New Mexico; and native asphalt, solid and semisolid bitumen, and bituminous rock (including oil-impregnated rock or sands from which oil is recoverable only by special treatment after the deposit is mined or quarried). All minerals are leasable on federal acquired lands and restricted allotted and tribal Indian lands.

Lands on this sheet withdrawn for coal are in Coal Land Withdrawal Wyoming No. 1, July 13, 1910, Wyoming No. 5, August 5, 1910, Wyoming No. 8, October 12, 1910, and Wyoming No. 10, May 6, 1911.

No land in this quadrangle is classified as valuable for geothermal resources, oil shale, phosphate, or potassium.

Known geologic structures and known coal leasing areas are shown on a separate overlay. Dashed land lines projected into unsurveyed areas are taken from U. S. Forest Service maps.

All information on this map compiled as of March 1, 1974.
