INTRODUCTION

In 1972 the U.S. Geological Survey, Water Resources Division, made a reconnaissance study of the location and severity of ground-water contamination throughout the 50 States and Puerto Rico. During the course of that study a substantial list of references pertaining to ground-water contamination was obtained, and it became obvious that such a list would be of value to agencies or persons working on problems related to ground-water quality. Therefore, this list was prepared, and a limited number of copies have been duplicated for distribution to interested parties.

The references are listed alphabetically and are also indexed according to geographic areas, States, kinds of contamination, sources of contamination, and general discussions. A report may be indexed under one or more of these headings. The indexes list only the first line of the bibliographic citation; for the complete citation, refer to the bibliographic list.

In general, the reports listed can be consulted in most large, public libraries, in university libraries, and in the Library of Congress. The reports usually are not readily available in Geological Survey offices.

BIBLIOGRAPHIC LIST
