UNITED STATES DEPARTMENT OF THE INTERIOR

GEOLOGICAL SURVEY

Preliminary map showing known and suspected active faults in western Montana

Compiled by Irving J. Witkind

Open-file report 75-285

1975

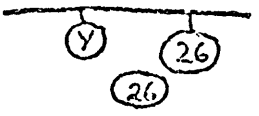
INTRODUCTION

Known and suspected active faults in the northern Rocky Mountains are plotted on the State map of western Montana (scale 1:500,000), which accompanies this report.

Each active fault is identified by a random number and a letter. Pertinent data about each fault are recorded on file cards, copies of which are included in this text. The letter refers to the youngest beds broken by that fault. The range extends from historic breaks (R) to other faults that have been recurrently active since the middle Miocene (B). Details are given in the Explanation (page 2). All faults, no matter what their age, are considered potentially dangerous, and liable to cause severe earthquakes if reactivated.

These data are made available in preliminary form to assist local, State, and federal agencies. Although most active faults are shown, it seems very likely that not all active faults are included. As additional information becomes available, these other active faults will be added.

EXPLANATION



FAULT--Known and inferred; approximately located

NUMBER IDENTIFYING FAULT--See accompanying material describing fault

CATEGORIES OF FAULTS

(R) Break along fault that occurred during historic time.

(O) Youngest beds broken are of Holocene age.

(Y) Youngest beds broken are of late Quaternary age (essentially Wisconsin time in the Pleistocene).

(G) Youngest beds broken are of Quaternary age (essentially Pleistocene time).

(B) Fault has been recurrently active since middle Miocene time (essentially during last 20 million years).

(P) Other fault that may be active.

NUMBER- 4 Active Faults Map

Name of fault - Centennial fault
Latest movement - Late Quaternary (Yellow) - Fault scarp cuts
(Age of fault) Some old surf. dep, but is buried by others.
Type of fault - High-angle normal - FH strikes east, dips north
Rel. dir. movement - N side down thrown

Length of fault - 40 miles - Locally longer, extending both to west + east
Attitude of fault - Strike east, dips valleyward (north)
Susceptibility to eq. - Great.
Confidence (reliability) level - High.
Recurrence interval - None in historic times - Seismic activity present now
Fault density - Only major scarp noted

Historic - Red - 1237
Holocene - Orange - 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

County - Beaverhead
Reference - Geol. map - Centennial fault
I -

Province -
Remarks -
- Strip map along Cent fault.
- Seismic activity - Cluster of epicenters north of Cent Valley (Striation)
- Scarp abt 40 feet high.

NUMBER- 5 Active Faults Map

Name of fault - Madison Range fault
Latest movement - On most - Late Quat. (Yellow). On some Historic (Red)
(Age of fault)
Type of fault - High-angle normal
Rel. dir. movement - West side downthrown

Length of fault - 54-55 miles
Attitude of fault - Trends about N. 20-30° W., dip SW.
Susceptibility to eq. - High
Confidence (reliability) level - Great.
Recurrence interval -
Fault density - Only one scarp now shows

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - I. J Witkind (+ others below)
Address U.S.G.S. - Fed. Ctr,
Denver, Colo, 80225
Phone - (303) - 234 - 3292
State map - Montana and Idaho
County - Madison - Mont
Fremont - Id.
Reference - Pardee - 1951, GSA V. 61, #4
U.S.G.S. P.P. 435; USGS I-781-A

Province -
Remarks -
Fault scarp 20-40 feet high
Historic scarp near Show Ranch - 2'-3'
A major fault of southwestern Montana

NUMBER- 6 Active Faults Map

Name of fault - Hebgen fault
Latest movement - Historic - 1959
(Age of fault)
Type of fault - High-angle normal
Rel. dir. movement - West side downthrown

Length of fault - Abt. 6 miles.
Attitude of fault - Trends N55-60W. ; dips 60°-80°SW
Susceptibility to eq. -
Confidence (reliability) level -
Recurrence interval - No prev. historic fltng
Fault density - Many small scarps parallel main fault

Historic - Red - 1237
Holocene - Orange 1214
Maj. Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - 1. J. Witkind

Phone - (303) - 234-3242
State map - Montana
County - Gallatin
Reference - U.S.G.S. P. 435, p. 40

Province -
Remarks -

1. Scarp height 2 to 20 feet. Many small breaks parallel it.

NUMBER- 7 Active Faults Map

Name of fault - Red Canyon fault
Latest movement - Historic - 1959 (Red)
(Age of fault)
Type of fault - High-angle normal
Rel. dir. movement - South side downthrown

Length of fault - 14 miles
Attitude of fault - Curving - Trends generally N55-60W
Susceptibility to eq. - Large
Confidence (reliability) level - High
Recurrence interval - First one in recent geol. time, (1 have been historically)
Fault density - Many small scarps within 1000 feet each side of fault

Historic - Red - 1237
Holocene - Orange 1214
Maj. Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - 1. J. Witkind
Address U.S.G.S. - Fed. Ctr.
Denver, Colo, 80225
Phone - (303) - 234-3242
State map - Montana
County - Gallatin
Reference - USGS P. P. 435, p. 38-39

Province -
Remarks -

1. Scarp height as much as 22 feet. Averages 10'

NUMBER-8 Active Faults Map

Name of fault - Red Rock fault zone
Latest movement - "Historic scarp bet Big and Little Sheep Creek, abt 1'-2' high"
(Age of fault) (Ryder from Scholten) Mostly Maj Late Quat - Yellow
Type of fault - High-angle normal fault
Rel. dir. movement - East side down/Basin-(Valleyward)

Length of fault - Abt 16 miles - Marked by striking fault scarp (40'±)
Attitude of fault - Trends abt. N. 40 W, dip NE at hi-∠. Valley side down
Susceptibility to eq. - Large
Confidence (reliability) level - High
Recurrence interval - Since mid-Miocene
Fault density - Only one scarp - cuts "modern alluvial fans", but these fans are buried by younger fans

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - Robert T. Ryder
Address USGS - Fed. Ctr, Denver, Colo, 80225 (Bldg 53)
Phone - (303) - 234 - 4127
State map - Montana
County - Beaverhead
Reference - Scholten + Ryder - GSA V. 84, No. 3 (Beaverhead paper)
Scholten and others - V. 66, #4, p. 387
Province -
Remarks -

1. Fault trace shown on Fig. 3 of Sch + Ryder.
2. Fault much longer on Kander. (No agreement on Scholten's part).
3. Historic break - abt 2' high scarp according to Scholten (thru Ryder 7/5/75). In Dillon newspaper (early 1900's) - some damage.

NUMBER-9 Active Faults Map

Name of fault - East Muddy Creek fault.
Latest movement - Late Cenoz (Blue)
(Age of fault)
Type of fault - High-angle normal.
Rel. dir. movement - SW side down

Length of fault - Abt. 15 miles)
Attitude of fault - Trends abt N. 15W, dips westward (valleyward)
Susceptibility to eq. - Low - Mod
Confidence (reliability) level -
Recurrence interval - Not moved since Oligocene?
Fault density -

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - Robert T. Ryder

Province -
Remarks -

1. E-W Muddy Creek fault's bound Muddy Cr - an intramontane basin (Graben)

NUMBER- 10 Active Faults Map

Name of fault - West Muddy Creek fault
Latest movement - Late Cenoz (Blue) - Cuts "Oligocene?" beds
(Age of fault)
Type of fault - High-angle normal
Rel. dir. movement - East side (valley side) downthrown

Length of fault - Abt. 12 miles)
Attitude of fault - Trends N.15W, dips eastward (valleyward)
Susceptibility to eq. - Low - Mod.
Confidence (reliability) level - Low - Mod.
Recurrence interval - Not moved since Oligo.
Fault density - No fresh breaks

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal - Purple 1210

Source - Robert T. Ryder

Phone - (303) - 234 - 4127
State map - Montana
County - Beaverhead
Reference Scholten + others (GSA, v. 66, #4, p. 387)

Province -
Remarks -
1. Dist. scarp along mtn front.

NUMBER- 11 Active Faults Map

Name of fault - Deadman fault
Latest movement - "Late Tert or Quat" - Late Cenoz. (Blue) (p. 385 - v. 66 #4)
(Age of fault)
Type of fault - High-angle normal (block fault)
Rel. dir. movement - SW side (valley) downthrown

Length of fault - 22-25 miles)
Attitude of fault - Trends N45°W, dips SW
Susceptibility to eq. -
Confidence (reliability) level -
Recurrence interval -
Fault density -

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal - Purple 1210

Source - Robert T. Ryder

County - Beaverhead
Reference Schmidt-Ryder; v. 84, #3, fig. 3.
Scholten + others (GSA - v. 66 #4), p. 385

Province -
Remarks -
1. No "fresh" or modern scarp, but slickenside
2. Sounds Tertiary fg on west.

NUMBER- 12 Active Faults Map

Name of fault - Kissick fault (see pl. 1 & Scholten + others, GSA, v. 66, #4)
Latest movement - Late Cenoz (Blue) - active" at least as late
(Age of fault) as Miocene" - p. 386, 6-66 #4.
Type of fault - High-angle normal
Rel. dir. movement - SW side downthrown (Valley side down)

Length of fault - Not 9-10 miles)
Attitude of fault - Trends N20W, dips SW.
Susceptibility to eq. - Low - Moderate
Confidence (reliability) level - Low
Recurrence interval - Not active since Miocene?
Fault density - High with front

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - Robert T. Ryder

Province -
Remarks -
1. Bounds Tendoy Rg on west.
2. No scarp along trace

NUMBER- 13 Active Faults Map

Name of fault - Blacktail fault
Latest movement - Late Cenoz (Blue) cuts Miocene beds - p 387-6-66, no. 4
(Age of fault)
Type of fault - High-angle normal (block fault)
Rel. dir. movement - NE side (valley) downthrown

Length of fault - 20 miles ±
Attitude of fault - Trends N40W, dips valleyward - (to NE)
Susceptibility to eq. - Low -
Confidence (reliability) level -
Recurrence interval - Not moved since Miocene
Fault density - No scarplets.

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - Robert T. Ryder

Pardee, v. 61 #4

Province -
Remarks -
1. Fronts east face of Blacktail Rg.
2. Present trace covered by Quat fanglomerates
3 Pardee (1950, p. 386) believes much of movt occurred during Pleistocene

NUMBER- 14 Active Faults Map

Name of fault - Unnamed
Latest movement - Late Cenoz. (Cuts Beaverhead) Blue
(Age of fault)
Type of fault - High-angle normal
Rel. dir. movement - SW side (valley) down

Length of fault - 5-6 miles
Attitude of fault - Trends N30W, dips SW
Susceptibility to eq. - Low
Confidence (reliability) level -
Recurrence interval -
Fault density -

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - Robert T. Ryder

Province -
Remarks -

NUMBER- 15 Active Faults Map

Name of fault - Emigrant fault
Latest movement - Late Quat - probably Holocene - Cuts Pleistocene deposits.
(Age of fault) Scarplet present - (Orange)
Type of fault - High-angle normal
Rel. dir. movement - West side down/throw

Length of fault - 35 miles
Attitude of fault - Trends N40E, dips valleyward - NW
Susceptibility to eq. - Moderate
Confidence (reliability) level - High.
Recurrence interval - Cuts Pleistocene deposits - Scarplets along pts of trace
Fault density - Generally one scarp

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206

Horberg Jour Geol., v. 48, #3, p. 280-282

Province -
Remarks -
1. Fit bounds west flank of Beartooth Plateau (Sp. mtns here called Snowy Range)
2. Hot springs along fault trace.

NUMBER- 28 Active Faults Map

Name of fault - Gardiner fault
Latest movement - Cuts Pleistocene deposits - Cuts Holocene - Orange -
(Age of fault)
Type of fault - High-angle normal at depth - Hi ∠ reverse
Rel. dir. movement - SW side down thrown

Length of fault -
Attitude of fault - Trends ~ N50W, dips SW
Susceptibility to eq. - High
Confidence (reliability) level - High
Recurrence interval - Est. 500 - 1000 years.
Fault density - Many small scarps - See Fl. 1 - Bull. 1277

Historic - Red - 1237
Holocene - Orange 1214
Maj. Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - George D. Fraser
Address USGS, Fed Ctr
Denver, Colo, 80225
Phone - (303) - 234 - 5042
State map - Mont.
County - Park
Reference - USGS Bull. 1277 -

Province -
Remarks -
1. Travertine fmd in Pleist - Holocene broken.

NUMBER- 29 Active Faults Map Ed. Ruppel-

Name of fault - Mammoth fault.
Latest movement - Generally breaks travertine, so probably Holocene - Orange
(Age of fault)
Type of fault - High angle normal
Rel. dir. movement - NE side down thrown

Length of fault - 8-10 miles
Attitude of fault - Curving - faces NE - trends gen NW
Susceptibility to eq. - High
Confidence (reliability) level - High
Recurrence interval -
Fault density -

Historic - Red - 1237
Holocene - Orange 1214
Maj. Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - George D. Fraser
Address USGS - Fed Ctr

County - Y. N. P.
Reference - Fraser - Bull. 1277 (Near Gardiner)
Brown GSA v. 72 #8 - See for trace of fault in Park.

Province -
Remarks -
1. Flt abuts Gardiner flt on north and extends into Wyo. - Eastern fault that bounds a graben - Western fault is Reese Creek (Gardiner) fault. (#30)
2. Conflict bet Ed and George. - I follow Ed in YNP, and George north of Park.

NUMBER- 30 Active Faults Map

Name of fault - Reese Creek fault - (East Gallatin fault)
Latest movement - Ripple Slates p. A51 - "latest movements - outglacial deposits" Orange (Age of fault)
Type of fault - High angle normal - determines east face Gallatin Rg.
Rel. dir. movement - East side (valley) down thrown
Length of fault - Trends north - abt 30 miles
Attitude of fault - Trends north, dips east.
Susceptibility to eq. - High
Confidence (reliability) level - High
Recurrence interval -
Fault density -

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Province -
Remarks -
1. Pardee, 1950, GSA, 0.61* & p. 383-385
*final mvmt not older than late Pleist (?)
2. Robinson does not show fault for full length of valley as does Pardee
3. Mitch Reynolds thinks it's a combination strike-slip - dip slip

NUMBER- 45 Active Faults Map

Name of fault - Unnamed fault at east edge of Scratchgravel Hills
Latest movement - Late Cenoz - Blue
(Age of fault)

Type of fault - High angle normal
Rel. dir. movement - NE side - (valley) down thrown

Length of fault - Abt 6 miles
Attitude of fault - Trends abt N15W
Susceptibility to eq. - High
Confidence (reliability) level - High
Recurrence interval -
Fault density - No grd breakage

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - Harry Smeder
Address

Phone -
State map - Montana
County - Lewis and Clark
Reference - Pardee - GSA-V.61 #4, p. 382-383
Knopf - I-381 - Deen) Shaw

Province -
Remarks -
1. Pardee believes there is a fault here on basis of aligned spurs. Stokes (p. 383) - "mints continuing into late Pleistocene"

NUMBER- 46 Active Faults Map

Name of fault - Prickly Pear fault
Latest movement - Historic - but no grd breakage - Historic eqs of 1935 - Led
(Age of fault)

Type of fault - Probably high-angle normal dipping NE
Rel. dir. movement - NE side (valley) down

Length of fault - 8 miles
Attitude of fault - Trends abt N50W, dips NE
Susceptibility to eq. - High
Confidence (reliability) level - High
Recurrence interval - Last eq in 1935 Many quakes in past.
Fault density -

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

p. 397-398

Province -
Remarks -
"p. 397 - "Creates Moccasin or Flathead Mts."

NUMBER- 121 Active Faults Map

Name of fault - Unnamed fault - Southwest flank of Flathead Range
Latest movement - Prob. Late Cenoz - Blue
(Age of fault)
Type of fault - High-angle normal
Rel. dir. movement - Downthrown on SW side

Length of fault - 23 miles)
Attitude of fault - Trend abt N25W, dips SW
Susceptibility to eq. - Low
Confidence (reliability) level -
Recurrence interval -
Fault density -

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Source - Mel Mudge
Address USGS - Fed. Ctr,
Denver, Colo., 80225
Phone - (303) - 234 - 3693
State map - Montana (C-2)
County - Flathead
Reference - Pardee, GSA, v. 61 #4,
p. 398

Province -
Remarks -
1. No age of faulting given by Pardee - but implication is that it is Post-mid-Miocene.

NUMBER- 122 Active Faults Map

Name of fault - South Fork Flathead River fault
Latest movement - Prob Late Cenoz - Blue
(Age of fault)
Type of fault - High-angle normal
Rel. dir. movement - Downthrown on SW

Length of fault -
Attitude of fault - Trends abt N-20 W.
Susceptibility to eq. - Moderate to High
Confidence (reliability) level -
Recurrence interval -
Fault density -

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

Province -
Remarks -
"Breaks mid-Tertiary peneplain"

NUMBER- 123 Active Faults Map

Name of fault - Hope fault (Pend Oreille Lake)
Latest movement - Prob. Late Cenoz. Blue (as below)
(Age of fault)

Type of fault - High-angle normal
Rel. dir. movement - SW side down (throw)

Length of fault - About 70 miles
Attitude of fault - Trends ~N-S to N40 W, dips SW

Susceptibility to eq. - Low
Confidence (reliability) level -

Recurrence interval -
Fault density -

Historic - Red - 1237
Holocene - Orange 1214
Maj Late Quat - Yellow 1209
Maj. Quat. - Green 1208
Late Cenoz. - Blue 1206
Other anomal. - Purple 1210

NUMBER- 125 Active Faults Map

Name of fault - Bull Lake fault, Swamp Lake fault, O'Brien Creek fault
Latest movement - Prob. Maj. Quat - Yellow
(Age of fault)

Type of fault - High-angle normal
Rel. dir. movement - West side down

Length of fault - Abt 28 miles
Attitude of fault - In general trends N, dips west
Susceptibility to eq. - Low to moderate
Confidence (reliability) level -

Recurrence interval -
Fault density -

Historic - Red - 1237
Holocene - Orange 1214
