SURFACE CONFIGURATION AND MINERAL SUPPLY MATERIALS,

MONTGOMERY COUNTY, MARYLAND

BY

J. NICHOLAS VAN ORSTEL

SCALE 1:48,000 AT 40 JULY 20, 1975 RESTON, VIRGINIA

SOURCE INFORMATION DIGITIZED BY C. G. MCCORMACK AND H. G. ROBINSON
FROM U.S. GEOLOGICAL SURVEY OPEN FILE REPORT NUMBER 74-154

LIMITING COORDINATES ARE 4 DEGREES OF LATITUDE BY 5 SECONDS OF LONGITUDE.
ACTUAL SQUARE CELL DIMENSIONS ARE COMPUTED FROM THESE FIGURES.
CELL AREA IS 4.59 ACRES. EACH CELL IS REPRESENTED BY ONE SYMBOL.

STATISTICAL DATA ANALYSIS AND MAPPING PROGRAM PREPARED BY GLENN H. BEAVERS
PROGRAM DEVELOPED, SPONSORED BY THE LAND USE ANALYSIS LABORATORY AND THE
AGRICULTURAL EXPERIMENT STATIONS, IOWA STATE UNIVERSITY.

U.S. GEOLOGICAL SURVEY OPEN FILE REPORT NUMBER 75-419

THIS IS A PRELIMINARY EXPERIMENTAL CARTOGRAPHIC MAP AND HAS NOT BEEN EDITED
FOR CONFORMITY WITH GEOLOGICAL SURVEY STANDARDS OR NOMENCLATURE.

MAP UNITS

SURFACE MATERIALS MAP OF MONTGOMERY COUNTY, MARYLAND SEPARATES SIX ...

UPLAND GRAVELS OCCUR IN TWO WIDELY SEPARATE AREAS: IN EASTERN ... EASTERN MONTGOMERY COUNTY AND BORDERING THE POTOMAC RIVER FLOODPLAIN AS IN ... CALVERT CLIFFS PARK IN THE COUNTY'S SOUTHEASTERN CORNER. THE GRAVELS ... RED, BROWN, AND YELLOW SANDS, SILTS, AND CLAYS. UPLAND GRAVELS CONSIST ... MEDIUM TO VERY COARSE GRAVEL AND UPLAND GRAVELS. COASTAL PLAIN STRATA AND ... ALLUVIUM AND SWAMP DEPOSITS OF STREAM VALLEYS AND RECENT TERRACES ... ARTIFICIAL FILL AND DISTURBED GROUND ARE DELINEATED AS WELL AS AREAS OF ...

UPLAND GRAVELS OCCUR IN TWO WIDELY SEPARATE AREAS: IN EASTERN ... EASTERN MONTGOMERY COUNTY AND BORDERING THE POTOMAC RIVER FLOODPLAIN AS IN ... CALVERT CLIFFS PARK IN THE COUNTY'S SOUTHEASTERN CORNER. THE GRAVELS ... RED, BROWN, AND YELLOW SANDS, SILTS, AND CLAYS. UPLAND GRAVELS CONSIST ... MEDIUM TO VERY COARSE GRAVEL AND UPLAND GRAVELS. COASTAL PLAIN STRATA AND ... ALLUVIUM AND SWAMP DEPOSITS OF STREAM VALLEYS AND RECENT TERRACES ... ARTIFICIAL FILL AND DISTURBED GROUND ARE DELINEATED AS WELL AS AREAS OF ...

COASTAL PLAIN STRATA ARE UNCONSOLIDATED OR PARTLY CONSOLIDATED CRETACEOUS ... TERTIARY SEDIMENTS OVERLYING THE METAMORPHIC ROCKS OF THE PIEDMONT ... PLATEAU. THESE STRATA DIP GENTLY SOUTHEASTWARD AT ABOUT 100 FEET PER MILE ... AVERAGE THICKNESS OF THE COASTAL PLAIN SEDIMENTS IS ABOUT 1,000 FEET ... THE OLDEST STRATA ARE THE PATAPSCO FORMATION AND THE ARUNDEL CLAY AND ... PATUXENT FORMATION, REGIONALLY DISTINGUISHED BY THEIR VARIEGATED ... THESE FORMATIONS ARE OVERLAIN BY THE PATAPSCO FORMATION AND THE ... SEVERN FORMATION, WHICH CONSIST OF INTERBEDDED SILTS, CLAYS, AND ... THE SEVERN FORMATION IS OVERLAIN BY THE PLEISTOCENE CALVERT FORMATION, ... CONSISTS OF SILTY FINE SAND. THE CALVERT FORMATION IS OVERLAIN BY ... PLEISTOCENE SEDIMENTS, WHICH CONSIST OF SILTY FINE SAND AND CLAY IN ... VALLEYS AND OF GRAVEL, SAND, SILT, AND CLAY ON THE UPLAND SURFACES. ... ALLUVIUM AND SWAMP DEPOSITS ARE RECENT SEDIMENTS OF SILT, CLAY, AND ... SAND IN THE STREAM VALLEYS AND ALONG THE POTOMAC RIVER. THEY ARE ... DERIVED FROM THE ADJACENT UPLAND SURFACES. COASTAL MARSH DEPOSITS ... ARE FINE-GRAINED SEDIMENTS OF SILT AND CLAY ALONG THE POTOMAC RIVER. ...

ARTIFICIAL FILL AND MAN-MADE, MOSTLY RESTRICTED, SPECIAL MATERIAL IN THIS COUNTY IS ... MAINLY ON THE INTERSTATE HIGHWAY SYSTEM FILL. IN THIS ... SURFACE ... PLASTIC CLAY, SILT, AND SAND, ... SOIL, ... SOIL ... SOIL ... SOIL
