Key wells and outcrops for regional analysis of Mississippian rocks,

Western United States

By Peter R. Rose

This report consists of (1) a base map (fig. 1), (2) a list of important outcrop localities and wells, and (3) published references to all cited outcrop areas and some wells. On the base map, wells are indicated by a dot and outcrops by an X; locations of all are provided by at least township and range.

These data and the map are intended to facilitate regional stratigraphic analyses of the Mississippian sedimentary rocks of the Rocky Mountains, Cordilleran, and Basin-and-Range provinces.
