Preliminary Map Showing Surficial Deposits in the West Half of the Condor Quadrangle, Missoula, Lake, and Flathead Counties, Montana

By

Irving J. Winkler

1937

Introduction

The U.S. Geological Survey personnel, in cooperation with their local Geologists, conducted desk studies and field investigations to determine the surficial deposits in the west half of the Condon Quadrangle. The studies were focused on the north to the area bounded by the

Surficial deposits

Surficial deposits in the northern part of the Quadrangle are mainly wind-blown sands and gravels. In the southern part, the deposits consist of loams and clays. Sand and gravel deposits occupy a small area in the northwestern corner of the Quadrangle. The deposits in the southern part are mainly loams and clays. The deposits in the northern part consist of loams and clays.
