OPEN-FILE REPORT 78-81

1978

SAMPLE LOCALITIES AND PHYSICAL AND CHEMICAL TEST DATA
FOR SOME BENTONITES FROM WYOMING AND MONTANA

By

Claudia W. Frahme

This report provides supplementary data for U.S. Geological Survey Open-File Report 77-158, "Exchangeable cations in Cretaceous bentonites from Wyoming and Montana" (Wolfbauer, 1977). Table 1 lists the localities for all of the bentonite samples used in the preparation of that report, and table 2 is a computer printout of the sample locality, physical, and chemical parameters discussed therein.

All physical tests and the measurement of pH were performed by the Bureau of Land Management. Apparent viscosity, plastic viscosity, yield point, water loss, and grit were determined according to the specifications of the American Petroleum Institute (1974). Green and dry strengths were determined by the methods of the American Foundrymen's Society (1963). Chemical tests were performed according to the methods outlined by Wolfbauer (1977).
