

EXPLANATION

- Fault dotted where concealed. U, upthrown side, D, downthrown side.
- Drill hole with data on Anderson coal bed.
- Isopach of thickness of Anderson coal bed, in feet. Contour interval is 2 feet.
- Structure contour on top of Anderson coal bed, in feet above mean sea level. Contour interval is 20 feet.
- Area where overburden is less than 100 feet thick.
- Area where overburden is 100 to 200 feet thick.
- Boundary of area where Anderson bed has burned.
- Boundary of area where coal probably is missing because of stream erosion.

Note 1 foot = 0.3 meter.

Plate 2 - Coal thickness, overburden thickness, and structure of Anderson coal bed in Hanging Woman Creek Study Area.

Base from U.S. Geological Survey, 1972
