DRAINAGE AREAS OF SURFACE WATER BODIES OF
THE SACO RIVER BASIN
IN SOUTHWESTERN MAINE

By Derrill J. Cowing¹ and Douglas Caracappa²

ABSTRACT

The report contains drainage area values for: lakes and ponds included in the Maine Informational Display Analysis System (MIDAS) File 906-Z, streams that drain an area greater than 25 mi², dams, and hydrologic data collection sites. Supplemental information in the report includes State and Federal location systems used to identify these lake and stream sites.

¹Hydrologist, U.S. Geological Survey, Augusta, Maine

²Hydrologic Technician, U.S. Geological Survey, Augusta, Maine

INTRODUCTION

Drainage areas, locations, and multiple site-identification numbers are listed in this report for 240 lakes and ponds and 57 sites on rivers and streams in southwestern Maine (see Figure 1). Locations listed in the tables are:

1. Lakes and ponds included in MIDAS File 906-Z.
2. The mouth of each stream that drains an area greater than 25 mi².
3. Dam sites.
4. Data collection sites on streams.

This is the second report of a series which will eventually list the drainage areas for all lakes and streams in Maine. The first report of this series covers drainage areas of surface water bodies in the Royal and Presumpscot River basins.

ACKNOWLEDGMENTS

Partial funding for the drainage area project was provided by the Maine State Planning Office. Staff personnel from the Land Use Regulation Commission of the State of Maine Department of Conservation assisted in the compilation of the drainage area information.

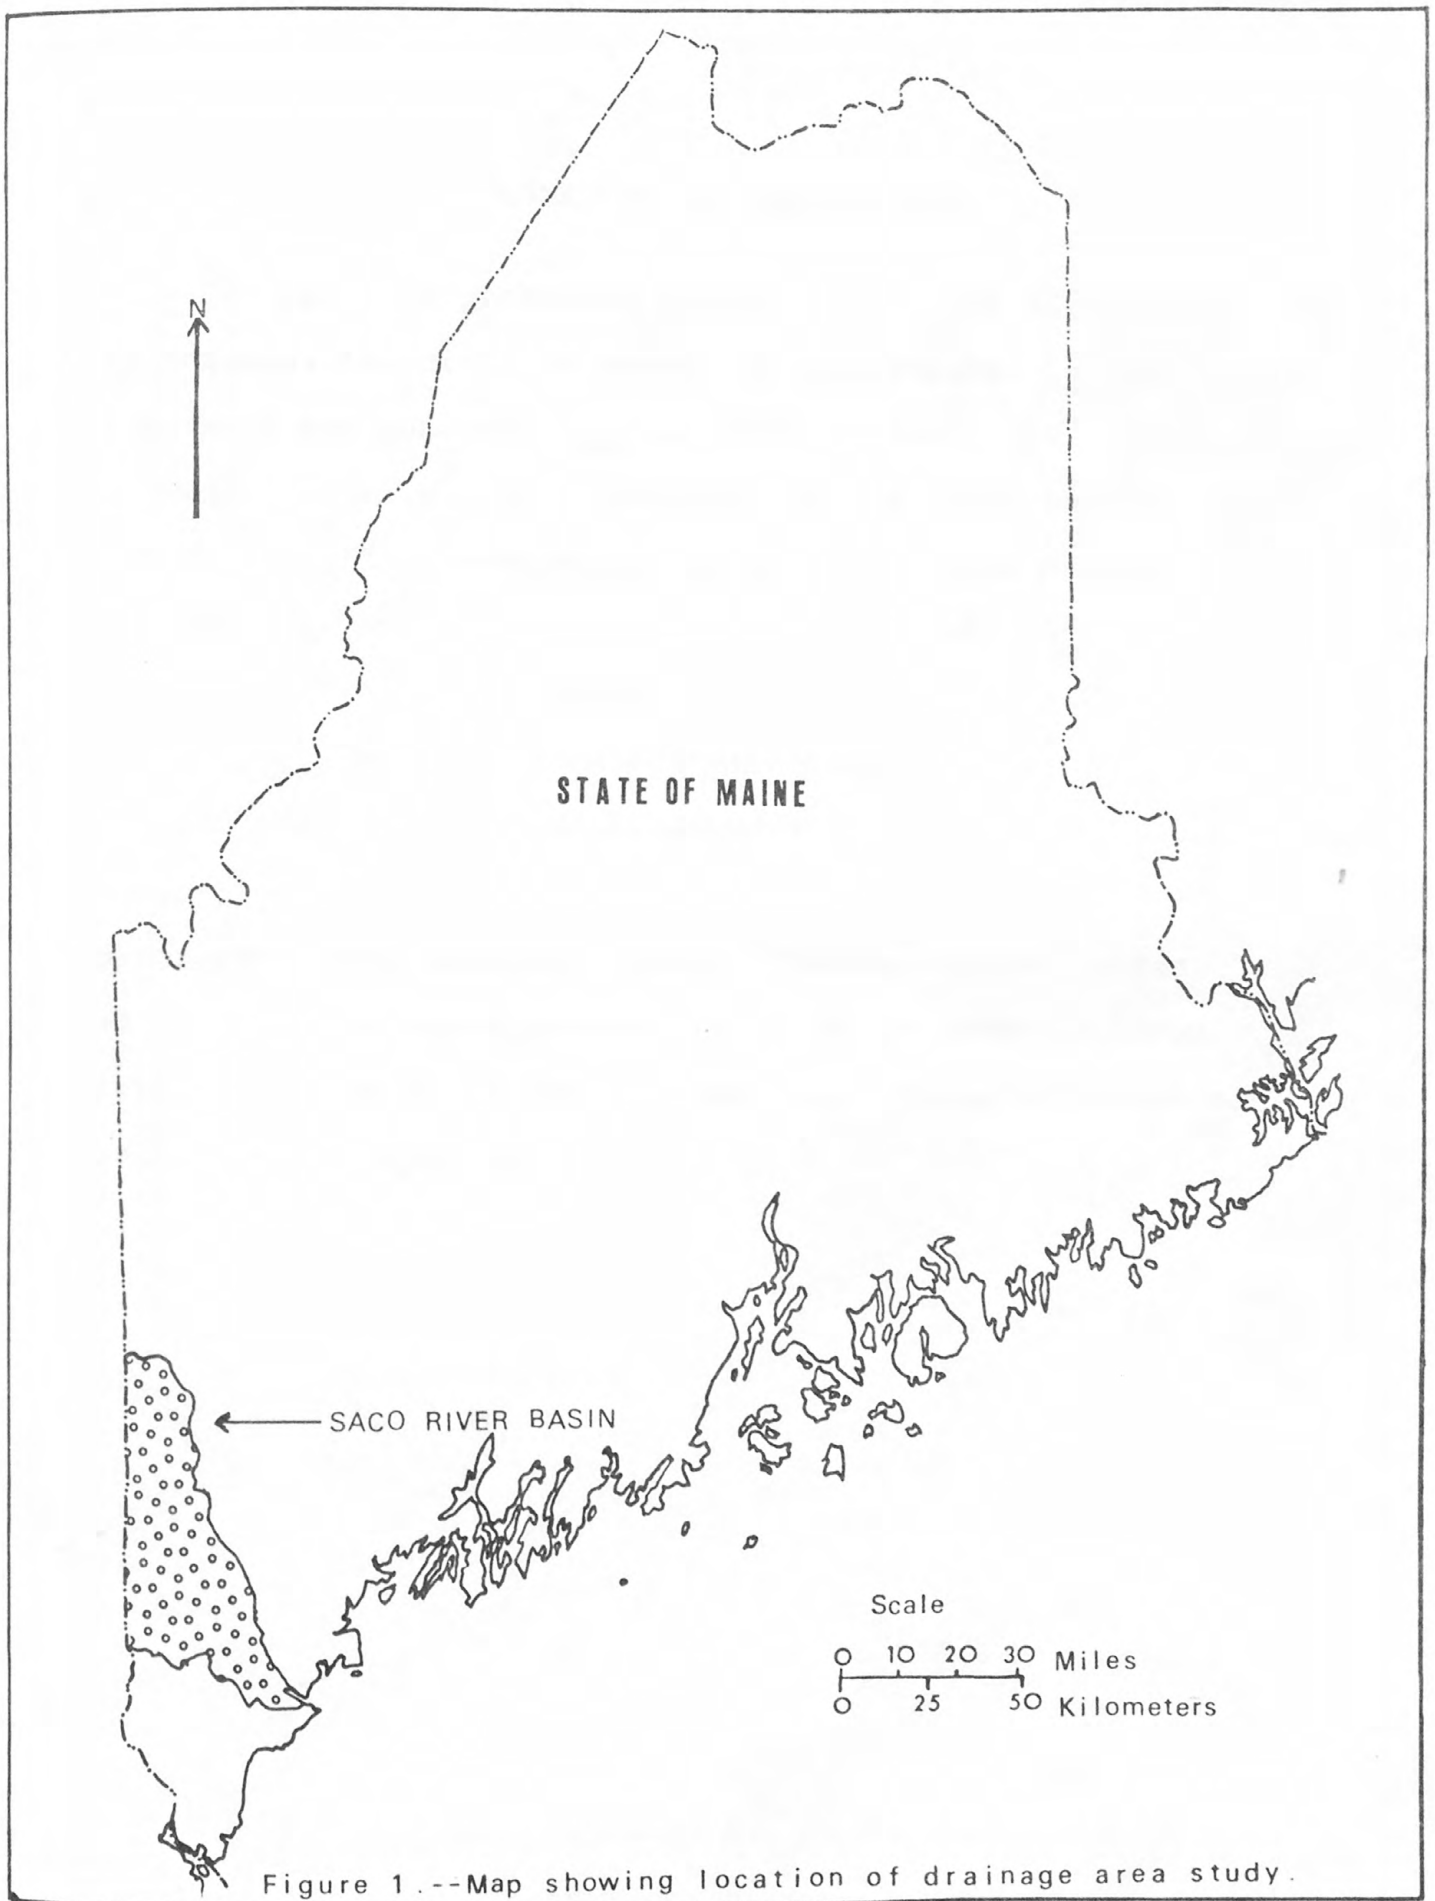

Figure 1.--Map showing location of drainage area study.

EXPLANATION OF TABULAR DATA

The data are presented in two parts. The first (Part I) contains the drainage areas and supplemental information for lakes and ponds in the Saco River basin. The second (Part II) contains the drainage areas and supplemental information for rivers and streams in the river basin. Explanations for each of the data elements tabulated in Parts I and II are as follows:

Lake or pond.--The name of the lake or pond, listed in alphabetical order, as it appears on the latest U.S. Geological Survey topographic quadrangle map. Lakes which do not have names are listed uncapitalized as "unnamed lake." Lakes which have the same name are listed in the order of their lake MIDAS number. Alternate names are listed in parentheses behind the primary name.

Drainage area.--The area, in square miles, measured in a horizontal plane, enclosed by a topographic divide from which direct surface runoff from precipitation normally drains or falls by gravity into the body of water above the specified measurement point. Methods used in determining the drainage areas are as described in Bulletin No. 4, Inter-Agency Coordination of Drainage Area Data, of the Subcommittee on Hydrology, Federal Inter-Agency River Basin Committee. The maps used for the delineation of drainage areas are available for inspection at the Survey's office at 26 Ganneston Drive, Augusta, Maine.

Drainage areas are reported to the following values:

<u>Drainage area</u>	<u>Significant figures</u>
Less than 10 mi ²	Nearest 0.01 mi ²
10 to 99.9 mi ²	Nearest 0.1 mi ²
Over 100 mi ²	Nearest 1 mi ²

Names and dates of topographic maps used in delineating and planimentering drainage areas for the basin included:

SACO RIVER BASIN

15-minute series in Maine

Buxton 1942	North Conway 1942
Kennebunk 1956	Sebago Lake 1942
Newfield 1958	

15-minute series in New Hampshire

Crawford Notch 1946	Plymouth 1928
Mt. Chocorua 1958	Winnepesaukee 1956
Mt. Washington 1935	Wolfeboro 1958
Ossipee Lake 1958	

SACO RIVER BASIN.--cont.

7 1/2-minute series in Maine

Fryeburg 1963	Wild River 1970
Hiram 1964	

7 1/2-minute series in New Hampshire

Carter Dome 1970

MIDAS lake number.--The four-digit number used to identify the lake or pond in the MIDAS computer data file 906-Z. A complete description of this numbering system can be obtained from the Maine Department of Inland Fisheries and Wildlife, State House, Augusta, Maine 04333.

Latitude - longitude.--The geographic location of the drainage area site to the nearest second. For lakes and ponds, the site is usually at the outlet. Where there is no surface water outlet, the southernmost point of the lake shore was used for the latitude-longitude identification.

Hydrologic unit code.--An eight-digit number identifying a geographic area representing part or all of a surface drainage basin or distinct hydrologic feature as delineated by the Office of Water Data Coordination on the 1974 State Hydrologic Unit Map (USGS 1974).

County/MCD code.--A five-digit code which uniquely identifies the 908 Minor Civil Divisions (MCD) of the State. The first two digits are the county codes established by the federal government for Maine's 16 counties. These county codes are:

01 - Androscoggin	17 - Oxford
03 - Aroostook	19 - Penobscot
05 - Cumberland	21 - Piscataquis
07 - Franklin	23 - Sagadahoc
09 - Hancock	25 - Somerset
11 - Kennebec	27 - Waldo
13 - Knox	29 - Washington
15 - Lincoln	31 - York

The last three digits of the code identify each of the State's minor civil divisions. A complete description of the code, "Standard Geographic Code for Minor Civil Divisions by County and by Planning and Development District - June 1974", can be obtained from the Maine State Planning Office, State House, Augusta, Maine, 04333.

River or stream.--The name of the river or stream, listed in downstream order, as it appears on the latest U.S. Geological Survey topographic quadrangle map with references to nearby landmarks. Supplemental information concerning the site can be found in parentheses under the site name.

MIDAS stream number.--The number used to identify the river or stream at its mouth in MIDAS computer file 906-Z. A complete description of the numbering system can be obtained from the Maine State Planning Office, State House, Augusta, Maine 04333, or the Maine Department of Inland Fisheries and Wildlife, State House, Augusta, Maine 04333.

Downstream order number.--The eight-digit number assigned to a site for identification in the U.S. Geological Survey national downstream-order-numbering-system. The numbering system in Maine starts in the headwaters of the St. John River basin and proceeds down the Atlantic Coast by river basin. For a more detailed explanation see "Water Resources Data for Maine - 1976".
