Bibliography for Map of
Prospective Hydrocarbon Provinces of the World

By Anny B. Coury,
Thomas A. Hendricks, and Theodore F. Tyler

Open-File Report 79-201
1979

This report is preliminary and has not been edited or reviewed for conformity with U.S. Geological Survey standards and nomenclature.
Contents

Introduction--------------------------------------------------------------- 1
Selected Unpublished Sources------------------------------------------------- 2
Author Index (alphabetical by author)---------------------------------------- 3
Geographic Index----------------------------------------------------------- 39
    General References----------------------------------------------------- 39
    Africa---------------------------------------------------------------- 40
    Asia------------------------------------------------------------------ 45
    Australasia------------------------------------------------------------ 59
    Central America-Caribbean---------------------------------------------- 63
    Europe---------------------------------------------------------------- 68
    North America---------------------------------------------------------- 74
    South America---------------------------------------------------------- 79
This bibliography includes the references that were used in the preparation of the "Map of Prospective Hydrocarbon Provinces of the World." The map is published in three sheets as Map MF 1044A, North and South America by A. B. Coury, T. A. Hendricks, and T. F. Tyler; Map MF 1044B, Europe, West Asia, and Africa by A. B. Coury and T. A. Hendricks; and Map MF 1044C, East Asia, Australia, and the Pacific by A. B. Coury and T. A. Hendricks.

An interrupted Sinusoidal equal area projection was used for the maps to facilitate areal comparisons; the scale is 1:20,000,000. The maps depict areas, both onshore and offshore, that either contain known oil or natural gas deposits or are favorable for their occurrence. These areas consist mostly of basins containing unmetamorphosed sedimentary rocks of greater than 1000 m thickness. Also included are some platforms and uplifts, foldbelts, and thinner rock sequences.

The bibliography consists of three sections: (1) selected unpublished sources, (2) author index, and (3) geographic index. The selected unpublished sources and the author index are arranged alphabetically according to the senior author's last name. The geographic index is arranged by continents or subcontinents, followed by minor geographic units, i.e. countries, regions and bodies of water. The references are arranged alphabetically by author within each geographic unit. When a reference covers several geographic areas, it is appropriately cross-referenced in the geographic index. Publications of foreign ministries or bureaus are listed under the respective country, with that country's name spelled in English style.
UNPUBLISHED SOURCES AT TIME OF COMPILATION
