

This outcrop mapping is derived and enlarged from a 1:125,000 scale publication Wegemann (1912, Plate XLII). Numerous irregularities in outcrop elevations and the area geology-topographic map relationship emphasized that this map presents a generalized configuration of the coal bed outcrop. Horizontal accuracy of outcrop location is estimated at ± 1000 feet (305 m).

EXPLANATION

— 400 —
OVERBURDEN ISOPACH—Showing thickness of overburden, in feet, from the surface to the top of the coal bed. Isopach interval 100 feet.

— A — ↑
TRACE OF COAL BED OUTCROP—Arrow points toward the coal-bearing area. Coal bed dashed where inferred.

To convert feet to meters multiply feet by 0.3048.

MAP SHOWING LOCATION OF THE NW¼ FIFTY-FIVE RANCH 15' QUADRANGLE AND THE POWDER RIVER BASIN KNOWN RECOVERABLE COAL RESOURCE AREA (STIPPLED), WYOMING
