MC CURTAIN QUADRANGLE
OKLAHOMA
7.5 MINUTE SERIES (TOPOGRAPHIC)

- 1000
- 800
- OVERBURDEN ISOPACHS—Showing thickness of overburden, in feet, from the surface to top of the Hartshorne coal bed (or Upper Hartshorne where split) isopach interval
- 20
- 30
- INTERBURDEN ISOPACH—Showing thickness of interburden, in feet, between the Upper and Lower Hartshorne coal beds. Isopach interval 10 feet (3.05 m).
- 164
(15)
(8.1)
- 1579
- OIL AND GAS TEST HOLE—Showing thickness of overburden and thickness of interburden as outlined above.
- H
- INFERRED TRACE OF COAL BED OUTCROP—Showing symbol of name of coal bed. Arrow points toward coal-bearing area.
- NORMAL FAULT—Bar and ball on downthrown side. Dashed where approximately located.
- SPLIT LINE—Line along which the Hartshorne coal bed splits into the Upper and Lower Hartshorne coal beds. This line corresponds to the 1 foot (0.305m) interburden isopach.
- NOTE: Thickness rounded to nearest foot. To convert feet to meters, multiply feet by 0.3048.
- 15MR
- MINING-RATIO CONTOUR—Number indicates cubic yards of overburden per ton of recoverable coal by surface mining methods. Contours shown only in areas underlain by coal of Reserve Base thickness within the strip-mining limit (in this quadrangle, the 150-foot-overburden isopach). To convert mining ratio to cubic meters of overburden per metric ton of recoverable coal, multiply mining ratio by 0.8428.
- 150 SL
- 150 SL STRIPPING-LIMIT LINE—Boundary for surface mining (in this quadrangle, the 150-foot-overburden isopach). Arrow points toward the area suitable for surface mining where the recovery factor is 80 percent, and away from the area suitable for subsurface mining (down dip to the 3,000-foot-overburden isopach) where the recovery factor is 50 percent.

This report was prepared under contract to the U.S. Geological Survey, and has not been edited for conformity with Geological Survey editorial standards or stratigraphic nomenclature. Opinions expressed herein do not necessarily represent those of the Geological Survey.
