PLATE 1
COAL DATA MAP

EXPLANATION

1. COAL-TEST HOLE - Showing depth of coal and type of coal in each hole. Scale 1"=100 ft. Each circle represents a hole, and the position of the hole is shown on the map by a black dot. The size of the circle indicates the depth of the coal in the hole. The type of coal is indicated by the color of the circle.

2. MINE - Showing name of mine and location of mine entrance on the map. Scale 1"=100 ft. Each mine is shown by a square, and the position of the mine entrance is shown by a black dot. The size of the square indicates the location of the mine entrance.

3. GROUND-DEPARTMENT SECTION - Showing ground conditions, such as the presence of water, gas, or other minerals, in each hole. Scale 1"=100 ft. Each ground-department section is shown on the map by a line, and the position of the section is shown by a black dot. The color of the line indicates the type of ground condition.

4. DRILL-HOLE AND MEASURED SECTION DATA SYMBOLS - Showing the depth and diameter of each drill hole, as well as the type of coal and the depth of the coal. Scale 1"=100 ft. Each drill hole is shown by a line, and the position of the drill hole is shown by a black dot. The size of the line indicates the depth of the drill hole, and the color of the line indicates the type of coal.

5. SCALE OF COAL-TEST HOLE - Showing depth of coal and type of coal in each hole. Scale 1"=100 ft. Each circle represents a hole, and the position of the hole is shown on the map by a black dot. The size of the circle indicates the depth of the coal in the hole. The type of coal is indicated by the color of the circle.

6. MINE - Showing name of mine and location of mine entrance on the map. Scale 1"=100 ft. Each mine is shown by a square, and the position of the mine entrance is shown by a black dot. The size of the square indicates the location of the mine entrance.

7. GROUND-DEPARTMENT SECTION - Showing ground conditions, such as the presence of water, gas, or other minerals, in each hole. Scale 1"=100 ft. Each ground-department section is shown on the map by a line, and the position of the section is shown by a black dot. The color of the line indicates the type of ground condition.

8. DRILL-HOLE AND MEASURED SECTION DATA SYMBOLS - Showing the depth and diameter of each drill hole, as well as the type of coal and the depth of the coal. Scale 1"=100 ft. Each drill hole is shown by a line, and the position of the drill hole is shown by a black dot. The size of the line indicates the depth of the drill hole, and the color of the line indicates the type of coal.

9. SCALE OF COAL-TEST HOLE - Showing depth of coal and type of coal in each hole. Scale 1"=100 ft. Each circle represents a hole, and the position of the hole is shown on the map by a black dot. The size of the circle indicates the depth of the coal in the hole. The type of coal is indicated by the color of the circle.

10. MINE - Showing name of mine and location of mine entrance on the map. Scale 1"=100 ft. Each mine is shown by a square, and the position of the mine entrance is shown by a black dot. The size of the square indicates the location of the mine entrance.

11. GROUND-DEPARTMENT SECTION - Showing ground conditions, such as the presence of water, gas, or other minerals, in each hole. Scale 1"=100 ft. Each ground-department section is shown on the map by a line, and the position of the section is shown by a black dot. The color of the line indicates the type of ground condition.

12. DRILL-HOLE AND MEASURED SECTION DATA SYMBOLS - Showing the depth and diameter of each drill hole, as well as the type of coal and the depth of the coal. Scale 1"=100 ft. Each drill hole is shown by a line, and the position of the drill hole is shown by a black dot. The size of the line indicates the depth of the drill hole, and the color of the line indicates the type of coal.

13. SCALE OF COAL-TEST HOLE - Showing depth of coal and type of coal in each hole. Scale 1"=100 ft. Each circle represents a hole, and the position of the hole is shown on the map by a black dot. The size of the circle indicates the depth of the coal in the hole. The type of coal is indicated by the color of the circle.
