

COMPOSITE COLUMNAR SECTION

* Thickness and lithology shown are only for basal conglomerate of Browns Park fm.

** Thickness and lithology shown are for eastern edge of quadrangle. To west Almond is about 550 feet thick, overlies about 50 feet of Pine Ridge Sandstone, which, in turn, overlies about 1100 feet of Allen Ridge.

CORRELATION OF COAL BEDS IN DRILL HOLES AND MEASURED SECTIONS

T. 13 N., R. 91 W.

T. 13 N., R. 90 W.

Distance between datums approximately 4500 feet.

EXPLANATION

- Index number
- Drill hole name
- Drill hole location
- Altitude, in feet, of drill hole (when no altitude - NA)
- No record of lithology
- Rock interval
- Coal bed, showing thickness in feet
- Break in rock interval, showing thickness, in feet, not plotted
- Coal bed symbols and names - Coal beds identified by bracketed numbers are not formally named, but are numbered for identification purposes in this quadrangle only.
- FU - Fort Union, undifferentiated
- A1 - Almond, undifferentiated
- Column shown closed if hole at total depth
