INTRODUCTION

This open-file report lists Geological Survey, U.S. Bureau of Mines, and State of Alaska Division of Geological and Geophysical Surveys reports and maps on the geology, geophysics, and mineral and water resources of Alaska published or released to open files in 1979. They are listed by the quadrangles (scale 1:250,000) into which Alaska has been subdivided for topographic mapping (p. vii). As these three agencies also issued reports and maps on other subjects, the following lists are selected in the sense that such documents are not included. Most of the listed reports and maps bear a 1979 imprint date; a few with earlier imprint dates actually were not delivered until 1979.

Reports that deal with regional tectonic hypotheses, regional syntheses, Alaska as a whole, or with areas that cannot be identified with a specific quadrangle are listed under Alaska - General, as are statistical presentations, indexes, and the like. Reports and maps that deal with offshore areas not within quadrangle boundaries are listed under Offshore Areas. The Alaska - General and Offshore Areas lists appear before the alphabetically arranged quadrangle listings.

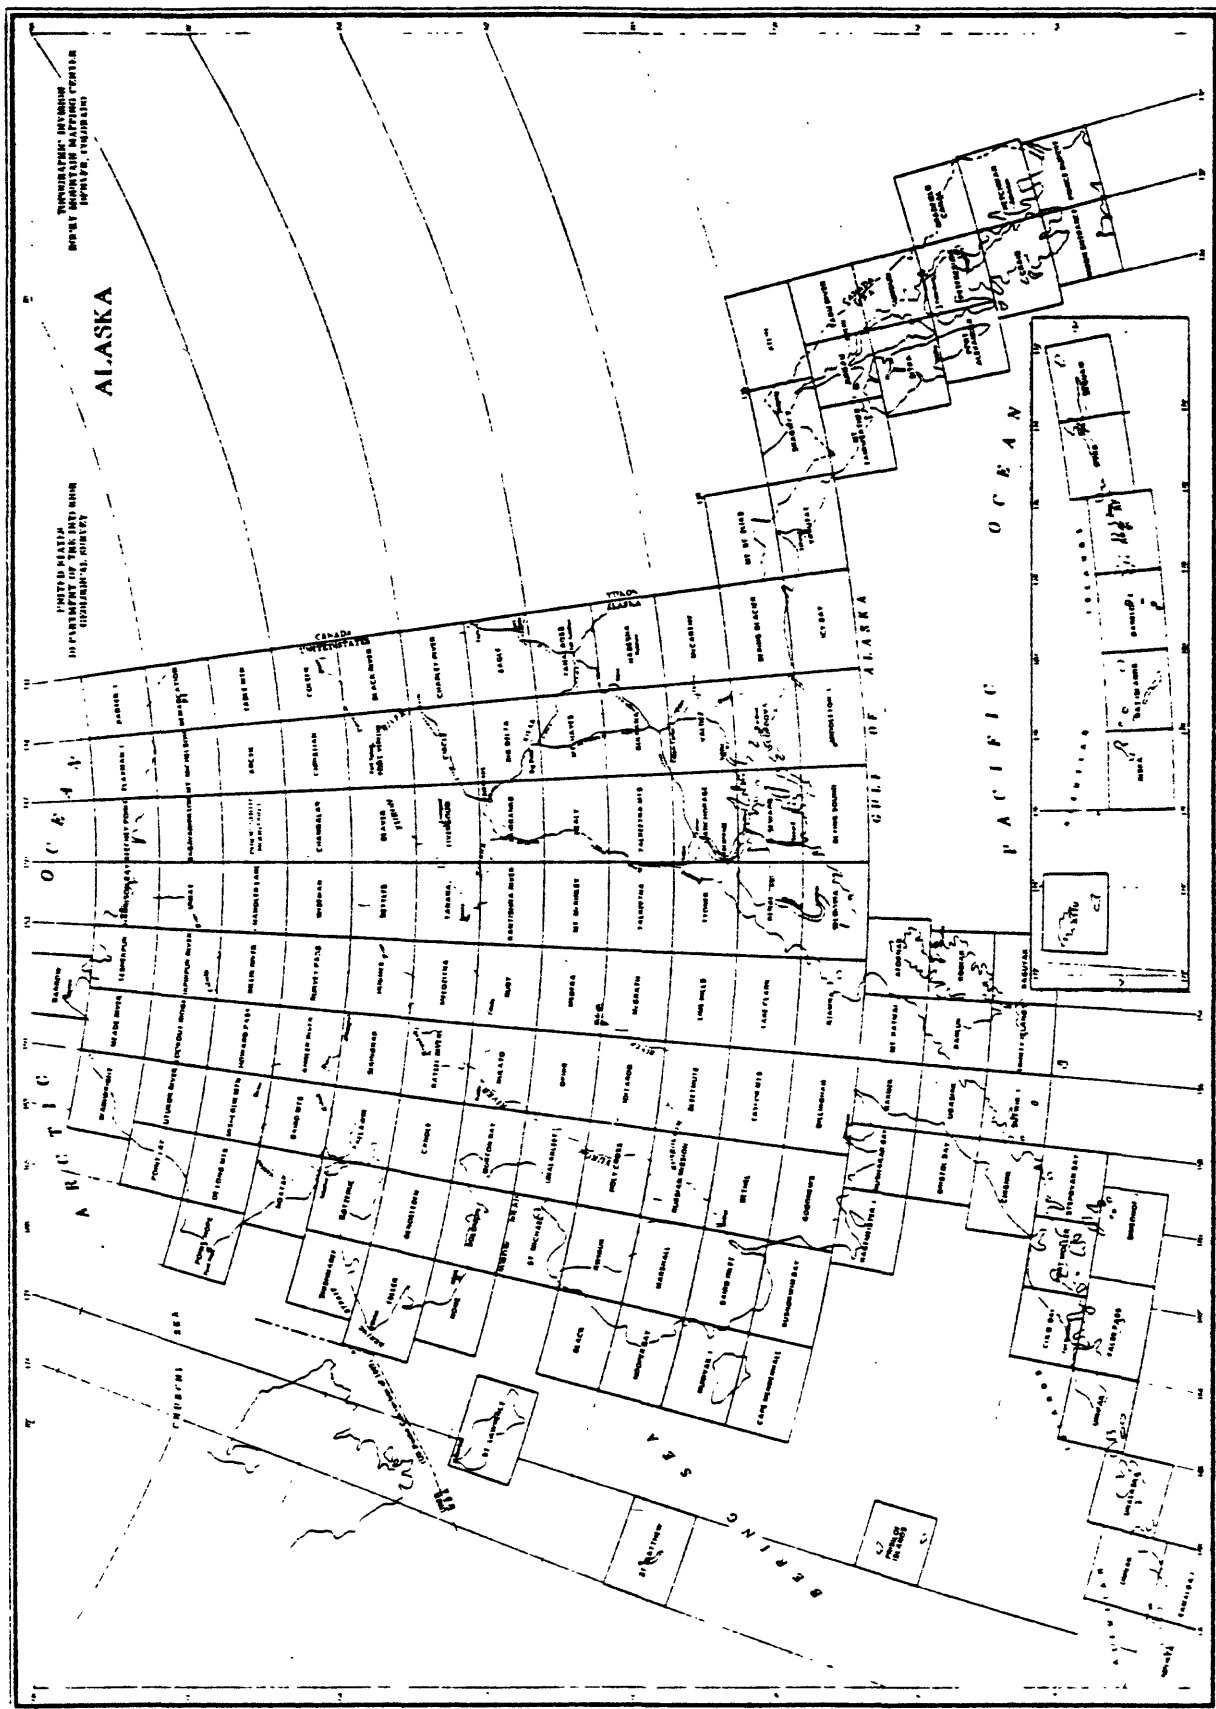

This index is intended to bring up to date the other indexes of this series, which are listed on p. v-vi.
