REPORT OF THE ANNUAL YIELD OF THE ARKANSAS RIVER BASIN
FOR THE ARKANSAS RIVER BASIN COMPACT,
ARKANSAS-OKLAHOMA
1979 WATER YEAR

By G. Louis Ducret, Jr.

INTRODUCTION

The computed annual yields for subbasins in the Arkansas River basin as defined in the Arkansas River Basin Compact, Arkansas-Oklahoma, 1972, are presented in this report. The area bounded by the Compact is shown in figure 1.

This report was prepared by the Water Resources Division of the U.S. Geological Survey in cooperation with the Arkansas Division of Soil and Water Resources. Streamflow data were furnished by the Arkansas and Oklahoma Districts of the Water Resources Division, Geological Survey, and the U.S. Army Corps of Engineers, Tulsa District. The Tulsa District also provided data from the Webbers Falls, Tenkiller Ferry, Robert S. Kerr, and Wister Reservoirs.

DEFINITION OF TERMS

The following terms used in this report are taken from Article II of the Arkansas River Basin Compact, Arkansas-Oklahoma, 1972.

The term "Arkansas River Basin" means all of the drainage basin of the Arkansas River and its tributaries from a point immediately downstream from the confluence of the Neosho River with the Arkansas River (fig. 1)

EXPLANATION

-  Spavinow Creek subbasin
-  Illinois River subbasin
-  Lee Creek subbasin
-  Poteau River subbasin
-  Arkansas River subbasin
-  Compact area boundary
-  Subbasin boundary
-  Gaging station and abbreviated station number

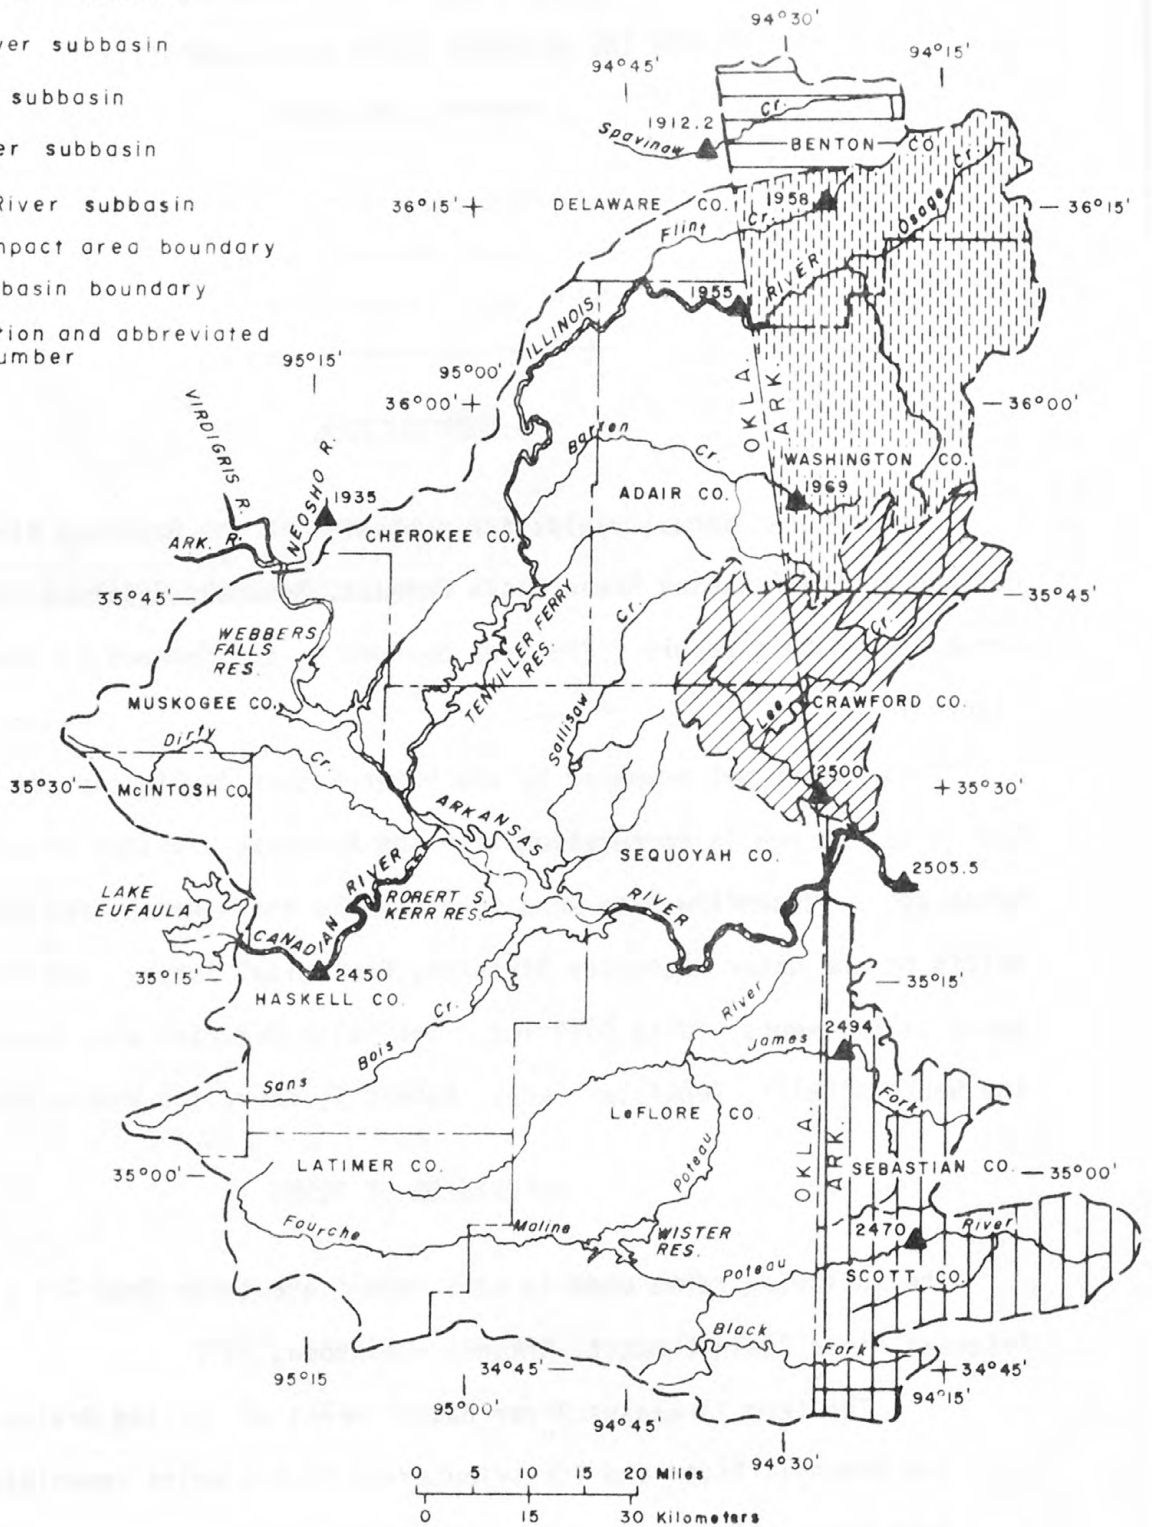

Figure 1.--Arkansas-Oklahoma Arkansas River Compact area and subbasins.

to a point immediately downstream from the confluence of Lee Creek with the Arkansas River, together with the drainage basin of Spavinaw Creek in Arkansas (top of fig. 1), but excludes that part of the drainage basin of the Canadian River upstream from Lake Eufaula Dam.

The term "Spavinaw Creek Subbasin" means the drainage area of Spavinaw Creek in the State of Arkansas.

The term "Illinois River Subbasin" means the drainage area of Illinois River in the State of Arkansas.

The term "Lee Creek Subbasin" means the drainage area of Lee Creek in the State of Arkansas and in the State of Oklahoma.

The term "Poteau River Subbasin" means the drainage area of Poteau River in the State of Arkansas.

The term "Arkansas River Subbasin" means all areas of the Arkansas River Basin except the four subbasins described previously.

The term "water year" means a 12-month period beginning on October 1 and ending September 30.

The term "annual yield" means the computed annual gross runoff from any specified subbasin. The runoff would have passed any certain point on a stream and would have originated within any specified area under natural conditions, without any manmade depletion or accretion during the water year.

Other hydrologic terms used in this report are defined as follows:

Acre-foot (acre-ft) is the quantity of water required to cover 1 acre to a depth of 1 foot and is equivalent to 43,560 cubic feet or 325,851 gallons.

Contents is the volume of water in a reservoir or lake. Unless otherwise indicated, volume is computed on the basis of a level pool and does not include bank storage.

Cubic feet per second (ft^3/s) is the rate of discharge representing a volume of 1 cubic foot passing a specified point during 1 second, and is equivalent to 7.48 gallons per second or 448.8 gallons per minute.

Discharge is the volume of water that passes a given point within a given period of time.

Instantaneous discharge is the discharge at a particular instant of time.

Mean discharge is the arithmetic average of individual daily mean discharges during a specific period.

Drainage area of a stream at a specified point on the stream is that area enclosed by a topographic divide from which direct surface runoff from precipitation normally drains by gravity into the stream upstream from the specified point. Figures of drainage area given herein include all closed basins, or noncontributing areas within the area, unless otherwise noted.

Gaging station is a particular site on a stream, canal, lake, or reservoir where systematic observations of gage height or discharge are obtained.

Stage-discharge relation is the relation between gage height and the amount of water flowing in a channel.

The following factors may be used to convert the English units published herein to selected units of the International System (SI):

Multiply English units	By	To obtain SI units
Length		
inch (in.)	25.4	millimeter (mm)
foot (ft)	.3048	meter (m)
mile (mi)	1.609	kilometer (km)
Area		
acre	4047	square meter (m ²)
	.004047	square kilometer (km ²)
square mile (mi ²)	2.590	square kilometer (km ²)
Volume		
cubic foot (ft ³)	.02832	cubic meter (m ³)
acre-foot (acre-ft)	1233	cubic meter (m ³)
	1.233x10 ⁻⁶	cubic kilometer (km ³)
Flow		
cubic foot per second (ft ³ /s)	28.32	liter per second (l/s)
	.02832	cubic meter per second (m ³ /s)

COMPUTATION OF ANNUAL YIELD

The annual yield and deficiency (table 1) for each subbasin were computed as described in Appendix I to the Arkansas River Basin Compact Arkansas-Oklahoma, 1972, supplement No. 1. Actual runoff for the subbasins (table 2) was computed as described in the Compact except for the stations Arkansas River at Muskogee, which has been discontinued, and Arkansas River at Van Buren, which has been moved 7.9 miles (12.7 km) downstream.

Annual depletion caused by major reservoirs (table 3) was computed for the four major reservoirs in the basin as described in Appendix I to the Compact. Depletions caused by small reservoirs and minor diversion for

Table 1.--Annual yield and deficiency for the subbasins as defined in the
Arkansas-Oklahoma Arkansas River Basin Compact

Subbasin	[Average annual flow in cubic feet per second for 1979 water year]					
	(1) Actual runoff from the subbasins	(2) Total depletions (+) or accretions (-)	(3) Annual yield	(4) Percent depletion allowed	(5) Minimum required flow	(6) Deficiency
Spavinaw Creek	78.3	0	78.3	50	39.2	0
Illinois River	507	0	507	60	203	0
Lee Creek	445	0	445	100	0	0

a From climatological data-Oklahoma; U.S. Dept. of Commerce, NOAA.

b From U.S. Corps of Engineers, Tulsa District.

c Adjusted for pan coefficient of 0.70 (from Wisler).

municipal and agricultural use are insignificant at this time and data are not included in tables 1 and 3.

A compilation of the areas of lakes and ponds in the Poteau River, Lee Creek, Spavinaw Creek, and Illinois River Subbasins was conducted by the Arkansas Division of Soil and Water Resources. This information was used to partially evaluate depletions caused by small reservoirs. Analysis showed that their present impact on the depletion in any Subbasin is less than 1 percent, and further consideration is not necessary at this time.

Streamflow data used in the computations are given in streamflow records (p. 11 to 25). The station description under "Remarks" states the degree of accuracy of the records. "Excellent" means that about 95 percent of the daily discharges are within 5 percent, "good" is within 10 percent, and "fair" is within 15 percent. "Poor" means that daily discharges have been less than "fair" accuracy.

STREAMFLOW

07165570 Arkansas River near Haskell, Okla.

LOCATION.--Lat $35^{\circ}49'23''$, long $95^{\circ}38'39''$, in NE $\frac{1}{4}$ sec.31, T.16 N., R.16 E., Muskogee County, near right bank on downstream side of bridge on State Highway 104, 2.0 mi (3.2 km) east of Haskell, 23.5 mi (37.8 km) upstream from Verdigris River, and at mile 483.7 (778.3 km).

DRAINAGE AREA.--75,473 mi² (195,475 km²), of which 12,541 mi² (32,481 km²) probably is noncontributing.

AVERAGE DISCHARGE.--7 years, 9,685 ft³/s (274.3 m³/s).

EXTREMES.--June 1972 to current year: Maximum discharge, 106,000 ft³/s (3,001 m³/s) Nov. 6, 1974; minimum daily, 193 ft³/s (5.47 m³/s) Feb. 26, 1977.

REMARKS.--Records good. Flow regulated by Keystone Lake, 55.1 mi (88.7 km) upstream.

COOPERATION.--Gage-height record and discharge measurements furnished by Corps of Engineers; records computed by Geological Survey.

Monthly and yearly discharge

Month	Total (ft ³ /s)	Maximum daily (ft ³ /s)	Minimum daily (ft ³ /s)	Mean (ft ³ /s)	Runoff in acre- feet
October	17,856	1,040	265	576	35,420

STREAMFLOW

07193500 Neosho River below Fort Gibson Lake, near Fort Gibson, Okla.

LOCATION.--Lat $35^{\circ}51'15''$, long $95^{\circ}13'45''$, in SE $\frac{1}{4}$ NW $\frac{1}{4}$ sec.19, T.16 N., R.20 E., Cherokee County, on left bank 1.1 mi (1.8 km) downstream from Fort Gibson Dam, 4.5 mi (7.2 km) north of Fort Gibson, and at mile 6.6 (10.6 km).

DRAINAGE AREA.--12,495 mi² (32,362 km²).

AVERAGE DISCHARGE.--29 years (1950-79), 7,825 ft³/s (221.6 m³/s).

EXTREMES.--May 1950 to current year: Maximum discharge, 223,000 ft³/s (6,320 m³/s) May 26, 1957; minimum, 12 ft³/s (0.34 m³/s) Oct. 10, 1957, Aug. 23, 1964.

REMARKS.--Records good. Flow completely regulated by Fort Gibson Lake.

COOPERATION.--Gage-height record and discharge measurements furnished by Corps of Engineers; records computed by Geological Survey.

Monthly and yearly discharge

STREAMFLOW

07194500 Arkansas River near Muskogee, Okla.

LOCATION.--Lat 35°46'10", long 95°17'55", in NW¼ sec.21, T.15 N., R.19 E., at bridge on U.S. Highway 62, 1.7 mi (2.7 km) downstream from Neosho River, 3.5 mi (5.6 km) northeast of Muskogee.

DRAINAGE AREA.--96,674 mi² (250,386 km²) of which 12,541 mi² (32,481 km²) probably is noncontributing.

REMARKS.--Gaging station discontinued Sept. 30, 1970, due to backwater conditions. Streamflow computed by combining flow at station 07165570 Arkansas River near Haskell, station 07176000 Verdigris River near Claremore, station 07177500 Bird Creek near Sperry, station 07193500 Neosho River below Fort Gibson Lake near Fort Gibson, and adjusting the total for the ungaged intervening drainage area.

STREAMFLOW

07195500 Illinois River near Watts, Okla.

LOCATION.--Lat $36^{\circ}07'48''$, long $94^{\circ}34'12''$, in NE $\frac{1}{4}$ sec.18, T.19 N., R.26 E., Adair County, near right bank on downstream side of pier of bridge on U.S. Highway 59, 1.5 mi (2.4 km) north of Watts, 4.5 mi (7.2 km) downstream from Cincinnati Creek, and at mile 106.2 (170.9 km).

DRAINAGE AREA.--635 mi² (1,645 km²).

AVERAGE DISCHARGE.--24 years, 594 ft³/s (16.92 m³/s).

EXTREMES.--August 1955 to current year: Maximum discharge, 68,000 ft³/s (1,930 m³/s) July 25, 1960; minimum, 8.6 ft³/s (0.24 m³/s) Oct. 26, 1955, Sept. 19, Oct. 14, 1956.

REMARKS.--Records good. Some regulation at low flow by Lake Francis Dam, 0.8 mi (1.29 km) above station. Since July 2, 1957, small diversion above station for municipal water supply for city of Siloam Springs, Ark.

COOPERATION.--Gage-height record and discharge measurements furnished by Corps of Engineers; records computed by Geological Survey.

STREAMFLOW

07245000 Canadian River near Whitefield, Okla.

LOCATION.--Lat $35^{\circ}15'45''$, long $95^{\circ}14'19''$, in SE $\frac{1}{4}$ SE $\frac{1}{4}$ sec.12, T.9 N., R.19 E., Haskell County, near right bank on downstream side of pier of bridge on State Highway 2, 0.8 mi (1.3 km) north of Whitefield, 5.5 mi (8.8 km) upstream from Taleka (Snake) Creek, 8.2 mi (13.2 km) downstream from Eufaula Dam, and at mile 18.8 (30.2 km).

DRAINAGE AREA.--47,576 mi² (123,222 km²), of which 9,700 mi² (25,123 km²) is probably noncontributing.

AVERAGE DISCHARGE.--25 years (water years 1939-63), 6,005 ft³/s (170.1 m³/s); 12 years (water years 1968-79), 5,315 ft³/s (150.5 m³/s).

EXTREMES.--July 1938 to current year: Maximum discharge, 281,000 ft³/s (7,960 m³/s) May 10, 1943; minimum daily, 0.4 ft³/s (0.011 m³/s) Oct. 8, 1956.

REMARKS.--Records good. Prior to February 1964, occasional slight regulation by Conchas Lake in New Mexico and except for 54 mi² (140 km²) of intervening area, completely regulated thereafter by Eufaula Lake.

COOPERATION.--Gage-height record and discharge measurements furnished by Corps of Engineers; records computed by Geological Survey.

STREAMFLOW

07247000 Poteau River at Cauthron, Ark.

LOCATION.--Lat 34°55'08", long 94°17'55", in NW¼SW¼ sec.16, T.3 N., R.31 W., Scott County, on right bank at downstream side of highway bridge at Cauthron, 2.9 mi (4.7 km) downstream from Cross Creek, 7.8 mi (12.6 km) downstream from Jones Creek, and at mile 109.0 (175.4 km).

DRAINAGE AREA.--203 mi² (526 km²).

AVERAGE DISCHARGE.--40 years, 215 ft³/s (6.089 m³/s).

EXTREMES.--February 1939 to current year: Maximum discharge, 32,200 ft³/s (912 m³/s) May 20, 1960; no flow at times in most years.

REMARKS.--Records good. As of September 1973, flow from 74.8 mi² (194 km²) above this station is controlled by 12 floodwater-detention reservoirs with a total combined capacity of 32,660 acre-ft (40.3 hm³) below the flood spillway crests, of which 29,546 acre-ft (36.4 hm³) is flood-detention capacity, 2,100 acre-ft (2.58 hm³) is water-supply storage, and 1,014 acre-ft (1.25 hm³) is sediment-storage capacity.

STREAMFLOW

07250550 Arkansas River at Dam No. 13, near Van Buren, Ark.

LOCATION.--Lat $35^{\circ}20'56''$, long $94^{\circ}17'54''$, in sec.28, T.8 N., R.31 W., Sebastian County, in Dam No. 13 control house on right bank, and at mile 308.9 (497.0 km).

DRAINAGE AREA.--150,547 mi² (389,917 km²), of which 22,241 mi² (57,604 km²) is probably noncontributing.

AVERAGE DISCHARGE.--52 years, 31,260 ft³/s (885.3 m³/s).

EXTREMES.--October 1927 to current year: Maximum discharge, 850,000 ft³/s (24,100 m³/s) May 12, 1943; no flow Nov. 2, 1975.

REMARKS.--Records good. Prior to October 1969, published as 07250500 Arkansas River at Van Buren. Beginning Apr. 26, 1970, daily discharge computed from relation between discharge, head, and gate openings. Flow regulated by many locks, dams, and reservoirs upstream.
