

Only the land classification categories present in the quadrangle are colored in the explanation and on the map; an asterisk (*) preceding a colored classification category in the explanation indicates that the category includes all land in the quadrangle and so, to reduce clutter, the color is omitted from the map. Categories not colored in the explanation are not present in the quadrangle. All withdrawn lands are prospectively valuable for the mineral for which they are withdrawn. LAND CLASSIFICATION APPLIES ONLY TO PUBLIC LANDS WITHIN CATEGORY BOUNDARIES. Leasable minerals are coal, oil and gas, and oil shale; phosphates, or phosphate rock; chlorides, sulfates, carbonates, borates, and silicates or nitrates of potassium and of sodium; sulfur in Louisiana and New Mexico; and native asphalt, solid and semisolid bitumen, and bituminous rock (including oil-impregnated rock or sands from which oil is recoverable only by special treatment after the deposit is mined or quarried). However, all minerals are leasable on Federal acquired lands and restricted allotted and tribal Indian lands. Leasable mineral outcrops are not shown. A SYMBOL PRECEDING A MINERAL NAME ON THE SELECTED MINERALS LIST INDICATES THE MINERAL IS PRESENT IN THE MAP AREA. Active mines are not differentiated from inactive mines, the size and grade of the mineral occurrence are not indicated, and names are given hereon for only a few of the mines.

- MINERAL LAND CLASSIFICATION
WITHDRAWN LANDS--Showing withdrawal number and date (month-day-year)
CLASSIFIED LANDS
PROSPECTIVELY VALUABLE LANDS--Hachures (where present) and/or color are on valuable side of boundary
AREAS DESIGNATED FOR COAL LEASING--Showing name and effective date (month-day-year)
KNOWN LEASING AREAS--Showing name and effective date (month-day-year)
Note: Not all areas have been assigned names

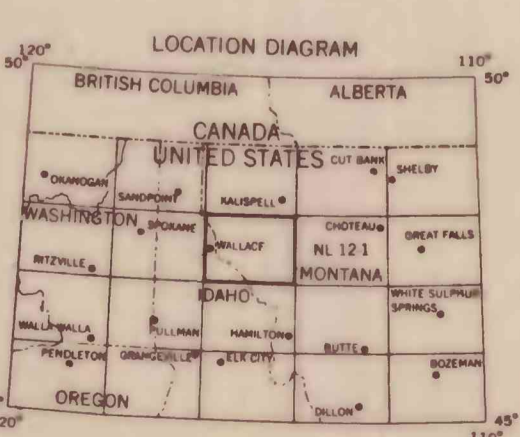

- WATERPOWER LAND CLASSIFICATION
Classified or withdrawn for waterpower or reservoir sites
DESCRIPTION OF MAP SYMBOLS
SELECTED MINERALS--Symbol shows location of mineral occurrence to the nearest 40-acre tract; multiple occurrences of a mineral within a quarter section (160 acres; 64.75 hectares) are not differentiated from a single occurrence. For cartographic reasons mineral occurrence may be shown by a dot and a leader to the symbol in parentheses.
Metallics
Aluminum, Antimony, Arsenic, Bismuth, Cadmium, Cesium and Rubidium, Chromium, Cobalt, Columbium and Tantalum, Copper, Gallium, Germanium, Gold, Iron, Lead, Manganese, Mercury, Molybdenum, Nickel, Platinum group, Rare earths, Silver, Selenium, Tellurium, Thorium, Tin, Titanium, Tungsten, Uranium, Vanadium, Zinc, Zirconium and Hafnium

- Nonmetallics
Abrasives, Alunite, Asbestos, Barite, Bentonite, Borates, Bromine, Brucite, Calcite, optical, Calcium chloride, Carbon dioxide, Clay, refractory, Distomite, Dumortierite, Feldspar, Fluorspar, Fuller's earth, Gem and ornamental stones, Graphite, Gypsum, Helium, Iodine, Kaolin, Kyanite group, Limestone, Lithium minerals, Magnesite, Magnesium sulfate, Meerschaum, Nephelite, Olivine, Quartz, Serpentine, Silica sand, Strontium minerals, Sulfur, Talc, Soapstone, Vermiculite, Volcanic ash, Pumice, Perlite, Wollastonite, Zeolite

SYMBOL COMBINATIONS--Certain symbols (silver, lead, and zinc, or uranium and vanadium) are combined into a single symbol to show several minerals at the same locality as shown in three examples below. Where individual symbols cannot be combined into a single symbol or where cartographic reasons dictate, occurrences of several minerals at the same locality are shown by a dot at the locality and a leader to the composite symbol or series of symbols in parentheses as shown in fourth example below.

- * Copper, gold, lead, zinc
x Chromium, cobalt, nickel
x Uranium and vanadium
-(*)--Silver, lead, zinc, and bismuth at same location
MINE OR PROSPECT WHERE MINERAL IS KNOWN--Mine or prospect is shown by a mineral symbol at the location or by a dot at the location and a leader to the symbol or symbols in parentheses.
x Carlisle mine--Uranium mine at location of symbol
-(*) Eureka mine--Gold, silver, lead, zinc, and fluorspar mine at location of dot
WIDESPREAD MINERAL OCCURRENCES--An area of numerous or widespread occurrences of one or more minerals is shown by a dotted outline and a symbol or symbols. A single occurrence of another mineral or minerals within such an area is shown by a dot at the locality and a leader to the symbol or symbols in parentheses. An overlapping area of mineral occurrence is outlined by a short dashed line.

- OTHER SYMBOLS
* Leasable mineral mine
x Mine or prospect where mineral is not known
+ Pit (bentonite or clay)
x Gravel or sand pit
diamond Quarry

LEASABLE MINERAL AND WATERPOWER LAND CLASSIFICATION MAP OF THE WALLACE QUADRANGLE, IDAHO, MONTANA

LANDS WITHDRAWN, CLASSIFIED, AND PROSPECTIVELY VALUABLE FOR LEASABLE MINERALS; OCCURRENCES OF OTHER SELECTED MINERALS; AND LANDS WITHDRAWN OR CLASSIFIED FOR WATERPOWER AND RESERVOIR SITES

Compiled by Andrew F. Bateman, Jr., Marilyn A. Baca, and Jesse L. Colbert

1980

SCALE 1:250,000
All information on this map compiled as of September 1, 1979
