ABSTRACT

This report lists in tabular form 336 drainage area divisions in the Gauley River basin of West Virginia. Drainage areas were compiled in a downstream direction for streams having drainage areas of approximately 5 square miles and for sites at U.S. Geological Survey gaging stations. The site, or measuring point, for each stream may be located by stream mile, measured upstream from mouth; by quadrangle ($7\frac{1}{2}$ minute); by county; or by latitude and longitude.

ACKNOWLEDGMENTS

This report was prepared by the U.S. Geological Survey in cooperation with the U.S. Army Corps of Engineers; the West Virginia Geological and Economic Survey; and the West Virginia Department of Natural Resources.

INTRODUCTION

The Gauley River drains 1,419 square miles and joins the New River at Gauley Bridge, W. Va. to form the Kanawha River (See fig. 1). Major tributary drainage within the Gauley River basin includes the Williams, Cranberry, Cherry, and Meadow Rivers, and Muddlety, Peters, and Twentymile Creeks.

Drainage areas were determined for 336 drainage area divisions, which were outlined on U.S. Geological Survey 7½-minute topographic maps.

Drainage areas were measured with an electronic graphics calculator and adjusted to agree with areas of 7½-minute quadrilaterals as found in the "Inter-Agency Coordination of Drainage Data."*

Stream mileages were determined with an electronic graphics calculator. These are distances from the mouth of the stream to the measuring point on the stream. Mileages were reported to the nearest one-hundredth of a mile. The latitude and longitude of the measuring point was determined by the electronic graphics calculator and is reported to the nearest second.

Drainage area information listed in this report is tabulated and totaled in a downstream order. River miles tabulated in this report increase in upstream order. Measuring points for individual sites can be located in the table through the use of intersecting tributaries, by county, by map quadrangle name, by West Virginia District, USGS map number, or by latitude and longitude.

*Notes on hydrologic activities - Bulletin No. 4 - November 1951.

INTRODUCTION TO TABLE 2

Table: Drainage areas of the Gauley River basin

Stream: As taken from U.S. Geological Survey topographic maps.

River Miles: Miles upstream from mouth

From: Most upstream point of subbasin (divide or previous measuring point)

To: Measuring point where partial areas are totaled.

Latitude & Longitude: Latitude and longitude at measuring point.

County: County in which measuring point is located.

Quad(s): The quad or quads and number(s) on which the drainage area division appears. The quads are numbered by the West Virginia District USGS numbering system.

Area on Quad: The area on each quad on which the drainage area division appears.

Summation of Partial Areas: The summation of the partial areas on the quads in the drainage area division.

Total Area, Gauley River: The total drainage area of Gauley River at measuring point, if not labeled otherwise. If labeled, then the total is drainage area of labeled stream at measuring point.

Table 2.--Drainage area divisions of the Gauley River basin.
