EXPLANATORY NOTE

This map and accompanying tables provide information on the known mineral occurrences of the Nedra Quadrangle. The term "mineral occurrence" is used in the broad sense to include lode and placer mines and prospects as well as unlocated occurrences, regardless of economic significance. Localities of rock samples with geochemical anomalies have also been included.

The definition of anomalous values has been arbitrarily made according to background geochemical

data obtained in the Medfra quadrangle for individual rock types, and data from Parker (1967) on
