SALT LAKE CITY NORTH QUADRANGLE

SPRINGS AND DEPTH TO WATER IN SHALLOW AQUIFERS, FORT DOUGLAS,
SALT LAKE CITY NORTH, AND SALT LAKE CITY SOUTH QUADRANGLES,
SALT LAKE AND DAVIS COUNTIES, UTAH

By
Richard Van Horn
1980

EXPLANATION

○ WITH DATE (IN FEET) AND DATE—Noted by author in observation, trench, or road cut. Where in parentheses the observation was made by a different observer.

○ SPRING—Noted by author; in addition to spring localities on published topographic maps.

The date of the depth to water level observation is included where available. Springs and depth to water for observations without known dates are included even though the data are not as useful. The user should be aware that the presence of springs and depth to water may change with the time of year, and with the amount of water withdrawn from nearby wells. All observations reported herein were between 1963 and 1979, and most were between April and June and between September and December.
