The map on the right shows the estimated average discharge at the point of measurement. The map includes various water resources areas and the water quality data for each area. The water quality data includes turbidity, color, and ammonia levels. The data is presented in a bar graph format, with the x-axis representing the water quality parameters and the y-axis representing the levels of the parameters. The bar graph shows the average water quality levels across the different areas.

The selected references section includes several studies and reports on water resources, with authors such as E. H. Miller, J. W. Ricketts, and others. The conversion factors section provides conversion tables for different units of measurement, such as flow, volume, and concentration.
