CONVERSION FACTORS

For those readers who prefer to use metric (SI) units rather than inch-pound units, conversion factors for terms used in this report are listed below:

| <u>Multiply inch-pound unit</u> | <u>By</u> | <u>To obtain metric (SI) unit</u> |
|---------------------------------|-----------|-----------------------------------|
| inch (in.) | 25.4 | millimeter (mm) |
| foot (ft) | 0.3048 | meter (m) |

HYDROGEOLOGIC DATA FOR ROCKY CREEK LANDFILL AND ADJACENT AREA,
NORTHWEST HILLSBOROUGH COUNTY, FLORIDA, 1969-73

By A. D. Duerr and J. W. Stewart

ABSTRACT

Well location and construction data are summarized for 222 wells in the Rocky Creek landfill and adjacent area in northwest Hillsborough County. Most of the data are for 92 wells within the landfill or immediate vicinity. Water-quality data are presented for 78 wells and nine surface-water sites. Water-level data for 133 wells penetrating the surficial and Floridan aquifers and lithologic logs for 35 wells are also presented.

INTRODUCTION

In 1969, Hillsborough County and the city of Tampa entered into a cooperative program with the U.S. Geological Survey to monitor water quality and water levels at the county's Rocky Creek landfill in northwest Hillsborough County (fig. 1). Data included in this report were collected from January 1969 through December 1973. Selected wells within 5 miles of the landfill were inventoried and used to monitor ground-water levels in the area (fig. 2). Locations of 42 public-supply wells are also shown in figure 2. Ninety-two test wells open to the surficial aquifer or to the Floridan aquifer were constructed at the landfill site and adjacent area to establish a monitoring network (fig. 3). An additional 22 test wells were constructed outside the landfill site. During the period of study, 31 trenches averaging 400 feet long, 125 feet wide, and 10 feet deep were excavated and filled with solid waste at the landfill site. In addition, two mounds of solid waste 20 feet high were constructed over filled trenches and covered with dirt (see fig 3).

The purpose of this report is to present hydrologic, geologic, and water-quality data collected at the Rocky Creek landfill and adjacent area from January 1969 through December 1973. Hydrologic and/or water-quality data are included for 222 wells and nine surface-water sites within a 100 mi² area in northwest Hillsborough County. Most water-quality data were obtained for test wells within the Rocky Creek landfill site. The report includes lithologic logs of 35 observation wells in the area.

PREVIOUS INVESTIGATIONS

Information on several wells in the area was included in a report on Hillsborough County by Menke and others (1964). Stewart and Hanan (1970) prepared a map of the north half of Hillsborough County showing areas of artesian flow, areas of sinkholes, the potentiometric surface of the Floridan aquifer, a generalized water-table map, thickness of surficial sediments, public-water supplies, and landfill sites. Stewart and Duerr (1973) showed how hydrology and geology are applied in evaluating landfill sites in west-central Florida. Many of the photographs in that report were taken at the Rocky Creek landfill. Fernandez and Hallbourg (1979) presented hydrogeologic data for wells at the Rocky Creek landfill for the period 1974-77.

HYDROGEOLOGIC DATA

Table 1 presents location, aquifer, depth, casing depth and size, screened interval, and land-surface altitude for 222 wells in northwest Hillsborough County. The wells range in depth from 5 to 1,250 feet. Eighty-seven wells were constructed in the surficial aquifer and 135 tap the Floridan aquifer. Well locations are shown in figures 2 and 3.

Table 2 lists water levels collected during the period 1969-73 for 133 wells in the surficial and Floridan aquifers. Water levels in the Floridan aquifer within the landfill area (fig. 3) ranged from 13.3 to 24.1 feet above NGVD of 1929 (National Geodetic Vertical Datum of 1929). Water levels in the surficial aquifer ranged from 4.0 to 25.2 feet above the datum. Water levels in both aquifers were higher in the eastern part of the landfill than in the western part.

Table 3 presents lithologic logs for 35 wells, most of which are within or near the landfill. These logs show that unconsolidated deposits of sand and clay are about 30 to 75 feet thick overlying the Floridan aquifer. Table 4 lists the site number and site name for nine surface-water sites. The locations are shown in figure 3. Water-quality data for the nine sites are listed in table 5. Table 6 lists water-quality data for 78 ground-water sites. Table 7 lists nitrogen and phosphorus, table 8 lists trace-metals data, and table 9 lists BOD, carbon, and coliform bacteria for the ground-water sites.

^{1/} Location of wells shown in figures 2 and 3.

^{2/} F, Floridan aquifer; S, surficial aquifer.

^{3/} Depths shown to nearest tenth of a foot are measured; other depths are reported.

^{4/} Altitudes shown to nearest tenth of a foot above National Geodetic Vertical Datum of 1929, determined by level instrument; other altitudes estimated from topographic maps.

1/ Location of wells shown in figures 2 and 3.

2/ F, Floridan aquifer; S, surficial aquifer.

3/ Depths shown to nearest tenth of a foot are measured; other depths are reported.

4/ Altitudes shown to nearest tenth of a foot above National Geodetic Vertical Datum of 1929, determined by level instrument; other altitudes estimated from topographic maps.
