This map and accompanying table provide information on metallic and selected nonmetallic mineral deposits potentially known in southeastern Alaska. In this report, we broadly define the term "known deposit" as a natural concentration of valuable or potentially valuable elements. It includes deposits at mines and prospects, and approximately 40 known occurrences of metallic or nonmetallic mineral deposits described in this report include metallic, nonmetallic, and industrial. Nonmetallic commodities such as construction materials, decorative stones, and agricultural products (except uranium) are shown. The map is based on the U.S. Bureau of Mines. Claims may be defined by prospecting and mining activities. Claims may be made to the Bureau of Mines. The U.S. Bureau of Mines. Claims may be made by prospecting and mining activities. Claims may be made by the Bureau of Mines.
