INDEX TO ACTIVE HYDROLOGIC DATA COLLECTION SITES IN FLORIDA, 1980-81

By Donald W. Foose and Martha E. Thagard

ABSTRACT

This index contains a list of active data-collection sites in Florida operated by the U.S. Geological Survey in cooperation with local, State, and Federal agencies during the period from October 1, 1980 through September 30, 1981. It is an update of "Index to Active Hydrologic Data Collection Sites in Florida, 1978-79" by J. D. Simmons, 1980, which was released as U.S. Geological Survey Open-File Report 80-220. The index shows the location of the site, the cooperator or cooperators supporting the data collection activities, the type and frequency of data collection, and the U.S. Geological Survey office responsible for collecting and processing the data.

ACKNOWLEDGMENTS

Most of the information in this report was extracted from a computer index of active water data-collection sites in Florida called the FINDEX file (Merritt, 1978). The retrieval, preparation, and plotting were done by the authors, Karen Hines, and Jill Williams of the U.S. Geological Survey, Tallahassee.

MAPS AVAILABLE

The location of each site shown on this index has been plotted on a county highway map (scale: 1 inch=2 miles) prepared by the Florida Department of Transportation. Triangles are used to indicate streams or canals, squares indicate lakes, and octagons indicate springs or wells. The sites in the printed index and maps are keyed together by an index or reference number. There are two maps for each county: one shows the location of active surface water data-collection sites; and the second shows the location of active ground water data-collection sites. Ozalid copies of these maps may be obtained, for the cost of duplication, by writing the U.S. Geological Survey, Suite F-240, 325 John Knox Road, Tallahassee, FL 32303. The copies are approximately 18 by 30 inches. A reduced copy of a typical map is shown in figure 1.

EXPLANATION OF DATA

The following paragraphs explain the types of data contained in this index.

Site Location Information

INDEX (INDX) NUMBER (NO)--The index number serves as a key to identify the sites plotted on a set of county highway maps (scale: 1 inch=2 miles) for the State of Florida prepared by the Florida Department of Transportation. One index number may represent more than one site.

STATION NUMBER (NO)--The eight-digit site numbers are assigned in accordance with the national system of downstream order numbers used in reports of the U.S. Geological Survey. The 15-digit numbers are based on the latitude and longitude of the site. A detailed explanation of these systems of numbering is given the annual series of reports entitled, "Water Resources Data for Florida." These U.S. Geological Survey site numbers also identify data collected at the site and stored in the National Water Data Storage and Retrieval System (WATSTORE) of the U.S. Geological Survey.

SITE NAME--The name of each site was determined from the base map of Florida where possible. The name usually consists of a local identifier for a well, or a stream name and the name of a nearby town. Streams and towns not named on the base map were identified from the best maps available.

COUNTY (CNTY) CODE--The county in which the site is located is represented by a numerical coding system developed by the National Bureau of Standards. In this coding system, consecutive odd numbers were assigned to an alphabetical list of the counties in each state. The county names and codes for Florida are listed on page 6.

SITE TYPE--An abbreviation is used to describe the data collection site. The list of abbreviations is given on page 7.

WATER MANAGEMENT DISTRICT (WMD)--An abbreviation is used to indicate the water management district in which the site is located. Figure 2 shows the boundaries of the five water management districts in Florida, and the abbreviations are listed on page 8.

LATITUDE (LAT) AND LONGITUDE (LONG)--The latitude and longitude establishing the location of the site are shown under their respective headings.

OFFICE--The subdistrict offices that have operational responsibility for the site are shown by an abbreviation from the list on page 7.

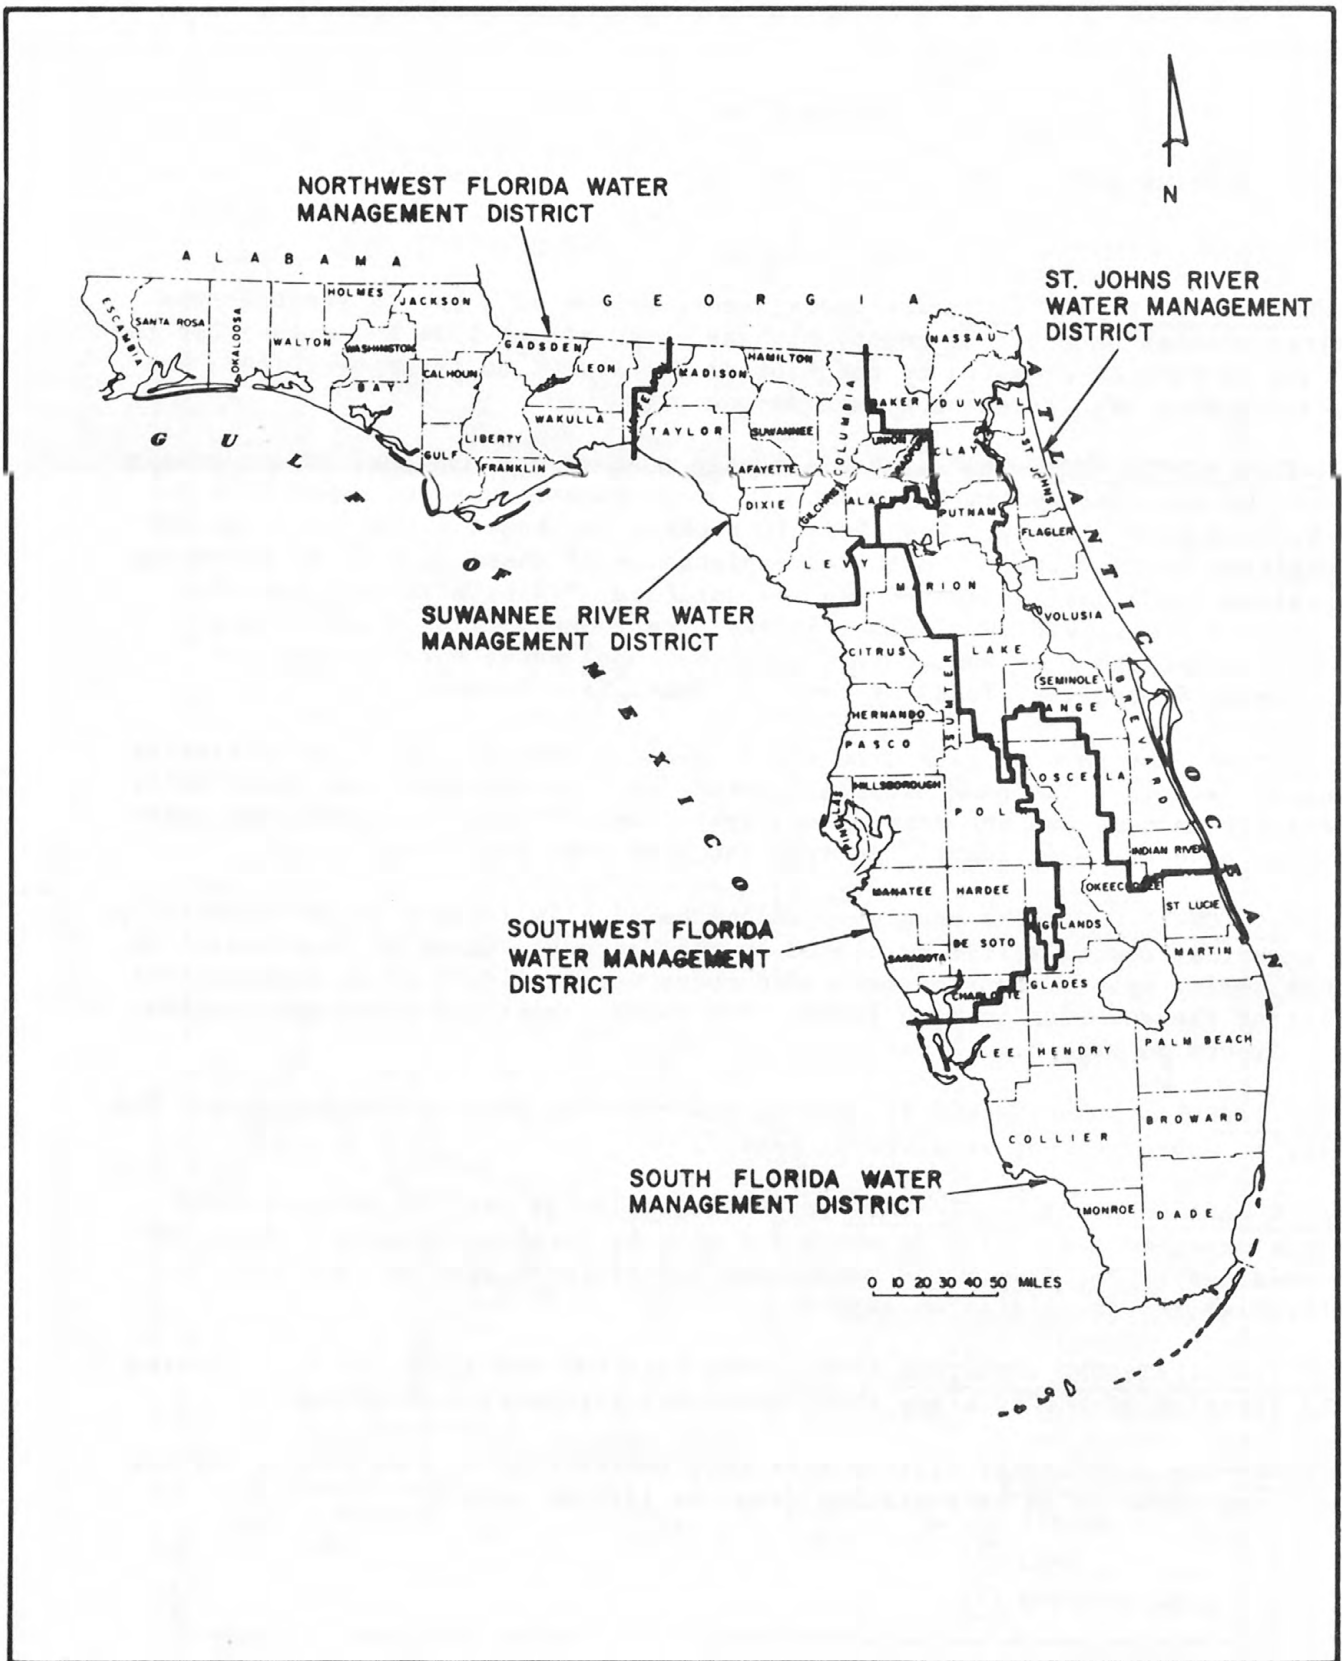

Figure 2.--Map showing the five water management districts in Florida.

Data Frequency Information

NETWORK OR PROJECT (PROJCT)--Those sites that are operated as part of the surveillance network are identified as "NET." Sites that are operated as part of the investigation activity are identified with a three-digit code. The list of currently active project numbers and investigation titles are listed on page 8.

COOPERATOR (COOP)--Abbreviations are used to identify the agency that supports the data-collection activities at the site through a cooperative program with the U.S. Geological Survey. The abbreviations are listed on pages 9 and 10.

DATA TYPE AND FREQUENCY--A series of codes and abbreviations are used to describe the type and frequency of water quality, flow, water level, and other data collected at each site. The codes and abbreviations are listed on page 7.

ARRANGEMENT OF DATA

The information in this index is presented in two sections. In each section the sites are arranged and listed by county in alphabetical order.

The first section contains information on all surface-water sites operated as part of the surveillance network or as part of investigation activities.

The second section contains information on all ground-water sites operated as part of the surveillance network and as part of investigation activities. This arrangement is a departure from the previous index which had separate sections for active ground-water network data collection sites and active ground-water project data collection sites.
