RESULTS OF CORE DRILLING IN 1978 FOR OIL SHALE IN THE EOCENE GREEN RIVER FORMATION, PICEANCE CREEK AREA OF WESTERN COLORADO

By

M. C. Smith and R. B. O'Sullivan

INTRODUCTION

In 1978, the U.S. Geological Survey drilled 15 core holes in the Piceance Creek area of western Colorado. This preliminary report presents the basic data gathered during the drilling program. The general location of all the core holes is shown on figure 1; a more precise location is shown on figures 2-14. A summary of core holes data is given in table 1. The wells were drilled with a truck-mounted rig, and the recovered cores were examined at the drill site. A lithologic description of each of the core holes accompanies this report. The purpose of the drilling was to obtain information to aid in the evaluation of the oil-shale resources of the Piceance Creek area. Cores from the drill holes were assayed for oil yield by the Natural Resource Laboratory, Inc. of Lakewood, Colorado, and Laramie Energy Technology Center, Laramie, Wyoming. Histograms showing oil yield and tables giving the analytical results for each core hole accompany this report.

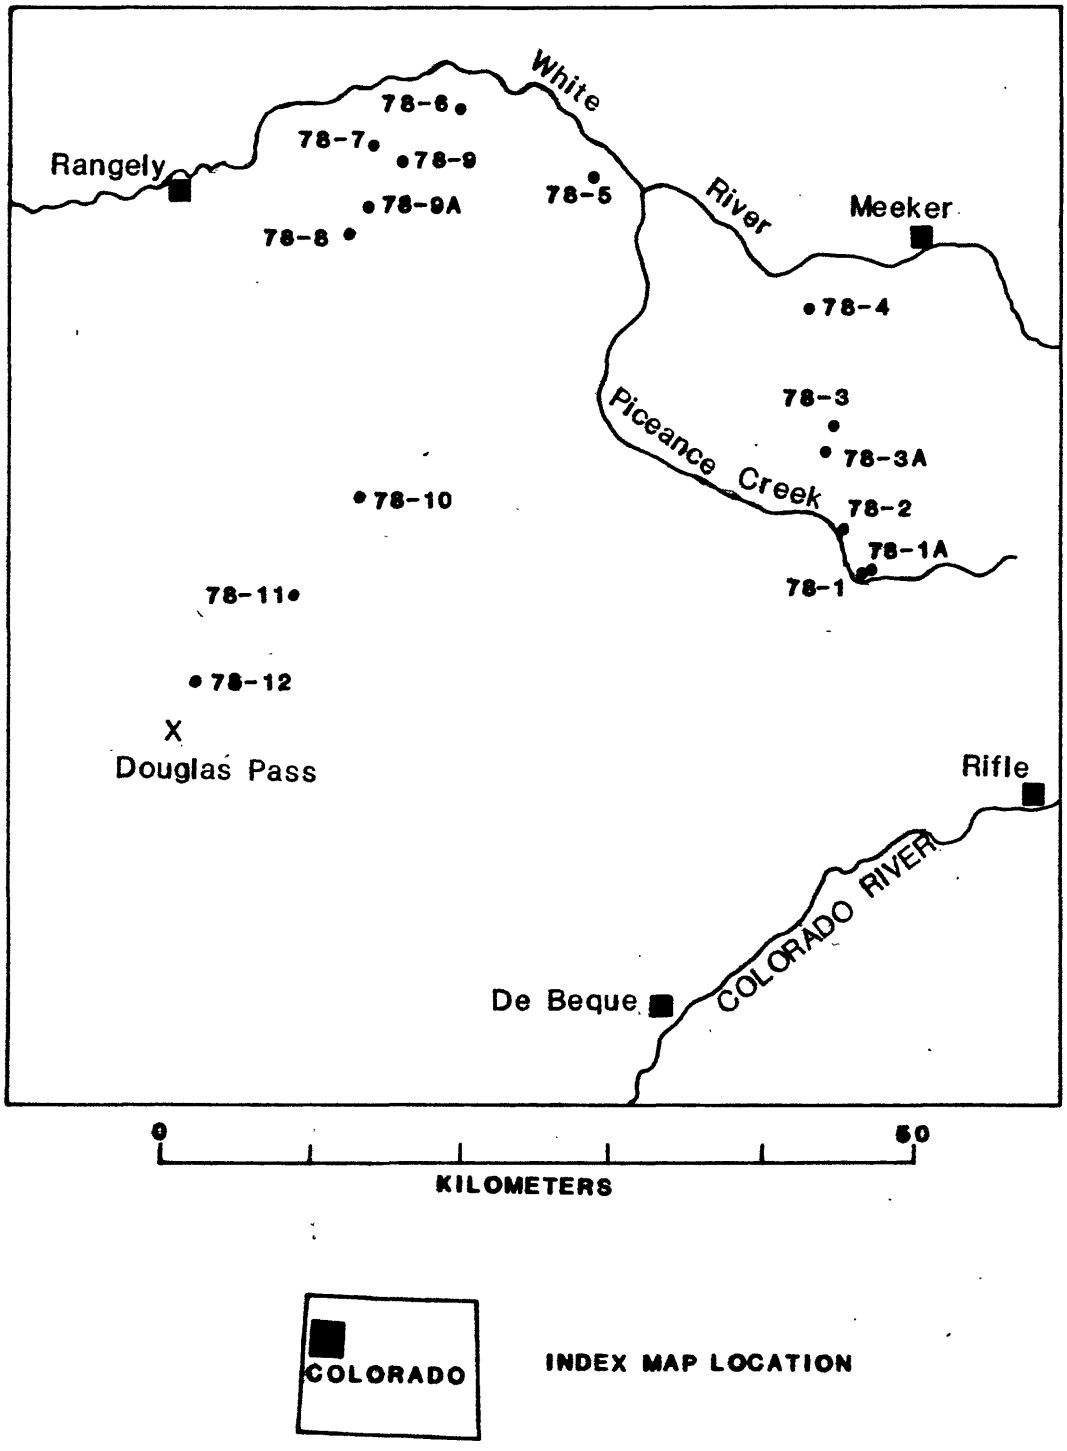

Figure 1.--Index map showing location of core holes drilled in 1978.

Table 1.--Core holes drilled in 1978 in Piceance Creek basin area.

[1/] Identification number for Geological Survey computer storage and retrieval program for oil-shale data.

[2/] Total depth derived from core description and rounded off to nearest foot.

[3/] Location uncertain because land lines omitted from topographic map.

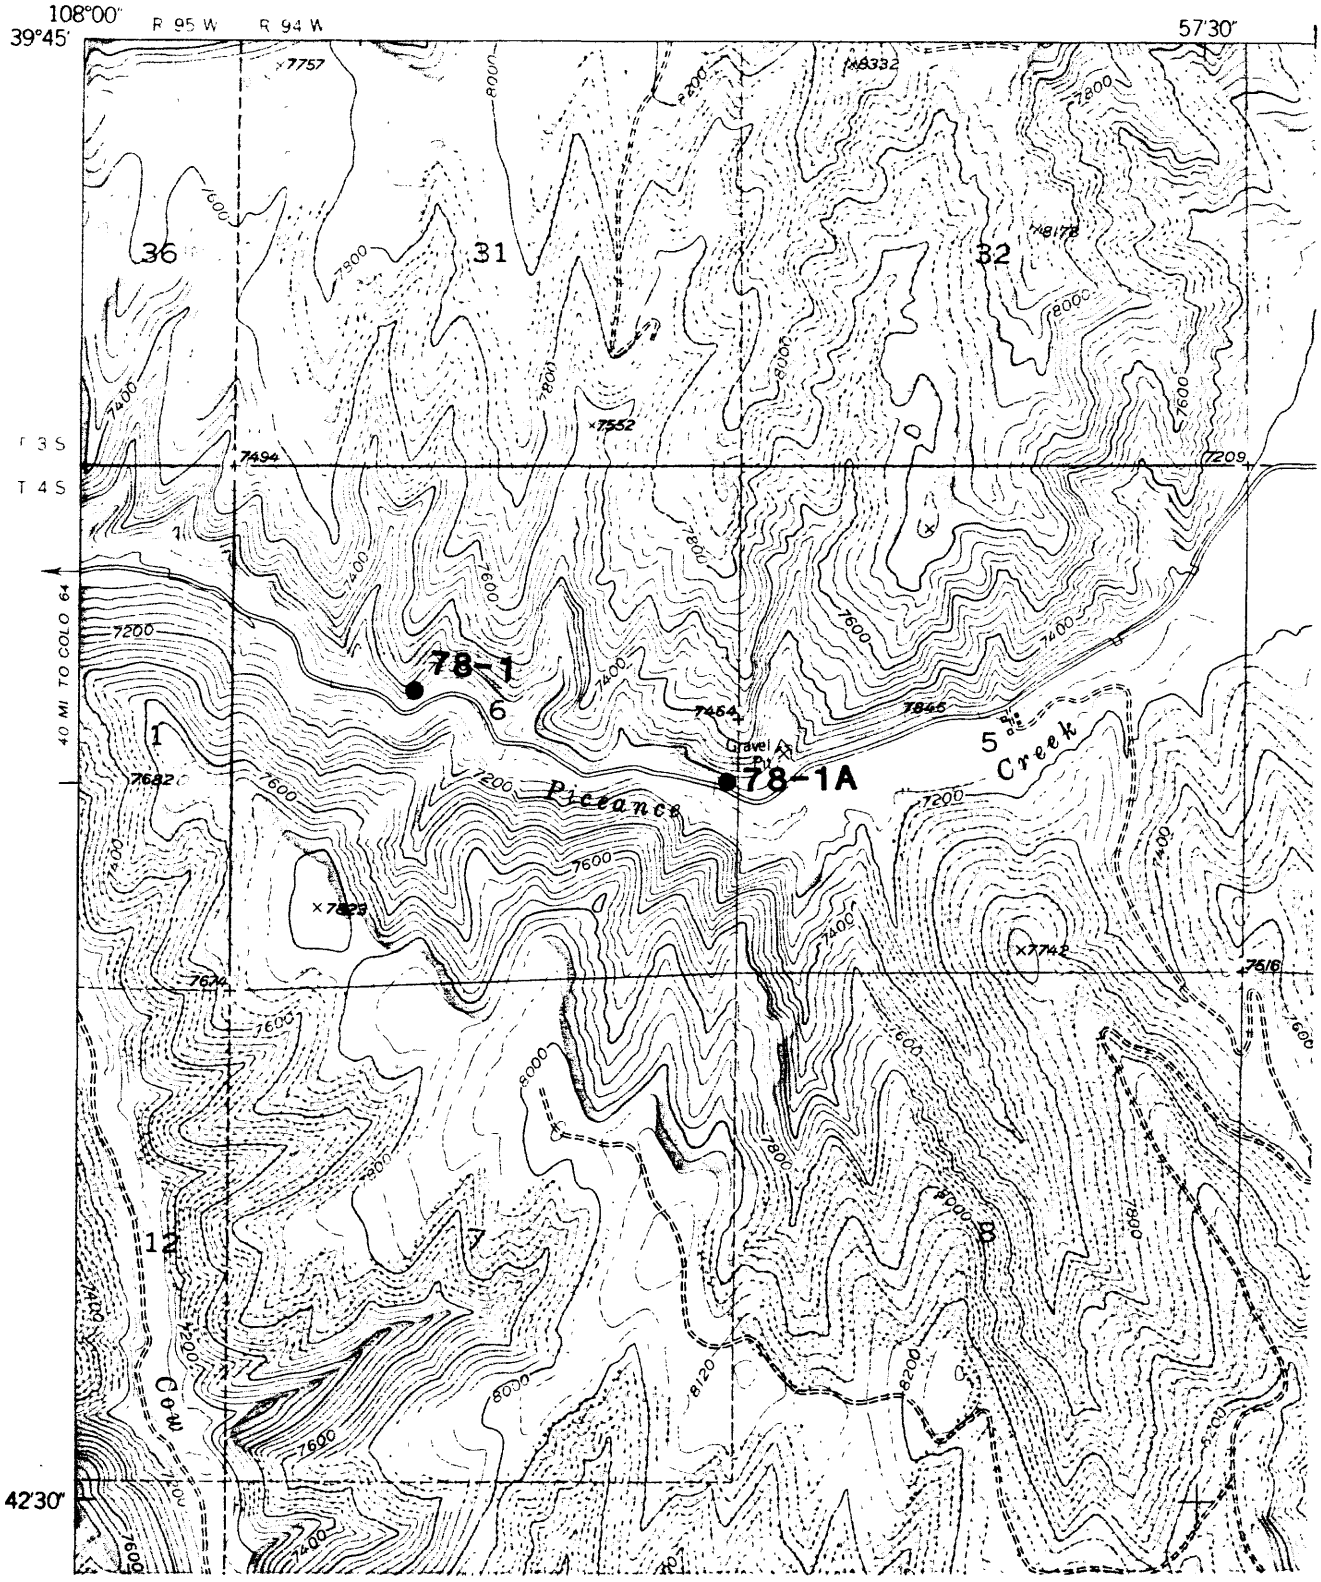

Figure 2.--Map showing location of core holes 78-1 and 78-1A. Base from Rio Blanco Quadrangle (1952). Scale 1:24,000.

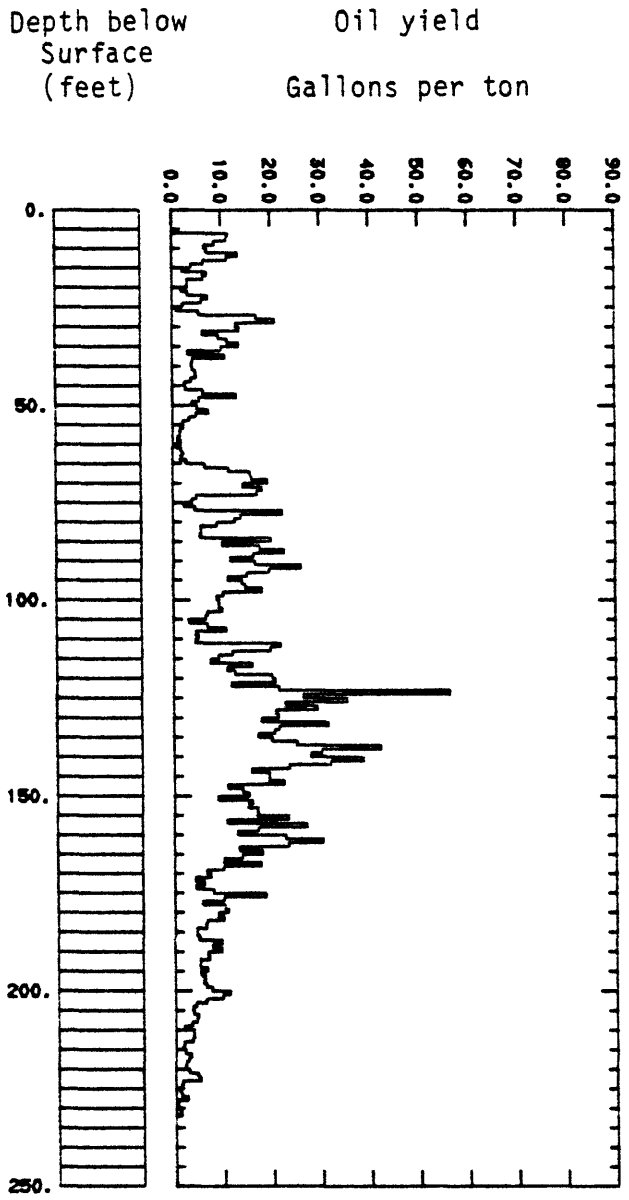
U.S. Geological Survey

Core hole 78-1



Corehole 78-1
Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
6.0	26.65		Brown to brownish gray oil shale with minor tuff. Little turbation with thin bedding. Moderately rich.
			tuff ~ 0.15' thick at 14.85-15.0
			tuff 0.15' thick at 15.6-15.75
			18.7-21.5' highly contorted bedding
			tuff ~ 0.2' thick at 19.0-19.3
			tuff 0.3' thick at 20.2-20.5
			tuff 0.35' thick at 21.05-21.4
			Tuffaceous zone with minor turbated oil shale 24.8-25.2, 0.4' thick tuff & 0.25' thick at 26.4-26.65
26.65	30.2		Dark brown rich oil shale interbedded with tuff and some leaner oil shale. Parts are well mixed tuff and oil shale. Tuff 0.2' thick at 28.6-28.8'; tuff 0.4' thick at 28.9'-29.3'.
30.2	46.4		Brown to brownish gray oil shale with abundant tuff. Moderately rich. Tuff 0.5' thick at 31.9-32.4 tan to brown, oxidized; tuff 0.1' thick at 32.8-32.9'; tuff 0.15' thick at 35.5-35.65; tuff 0.75' thick at 36.3-37.05; highly tuffaceous zone 38.5-40.9' 2.4' thick, homogenized.

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
46.4	113.1		Dark brown to brown rich oil shale with abundant intermixed tuff. Green and blue material in some fractures and in beds, some folding, but generally even bedding
			tuff 0.4'thick at 49.05-49.45
			tuff 0.1' thick at 58.0'
			tuff 0.1' thick at 64.0
			tuff 0.15' thick at 65.3-65.45
			tuff 0.2' thick at 73.2-73.4
			tuff 0.25' thick at 73.7 - 73.95
			tuff at 0.25' thick at 74.05- 74.3
			tuff 0.1' thick at 74.5'
			Sequence of thick tuffs with thin even layers of oil shale between them from
			74.8-77.2. 2.4' thick white tuff 0.15' thick at 77.2-77.35
			Very dark brown to black oil shale with some tuffs.
			77.35-78.1
			Sequence of thick and thin tuffs of different textures with thin interbedded
			dark rich oil shale, 80.9'-86.5', 5.6' thick tuff 0.1' thick at 89.3'
			Tuff 0.2' thick at 92.0-92.2
			Tuff 0.1' thick at 92.8
			Tuff 0.25' thick at 95.0-95.25
			Tuff 0.15' thick at 95.85 - 96.0
			Tuff 0.2' thick at 99.2-99.4 contorted

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Tuff 0.3' thick at 99.9' - 100.2'
			Tuff 0.2' thick at 103.1' - 103.3'
			Tuff 0.4' thick at 103.4' - 103.8'
			Tuff 0.4' thick at 104.4' - 104.8'
			~~Tuffaceous section ~70 percent massive thick to thin tuffs~~
			~~with interbedded moderately rich to rich oil shale~~
			~~105.2'-111.0', 5.8' thick total~~
~~113.1~~	~~122.6'~~	9.5'	~~Highly tuffaceous section with ~70 percent tuff interbedded with brown to very~~
			dark brown rich oil shale. Some turbation. Individual tuffs not described
122.6	143.0		~~Dark brown rich oil shale interbedded with tuff. Little turbation.~~
			~~tuff 0.1' thick at 124.6'~~
			~~Shallow dipping bedding plane slickensides at 124.9', 125.05, 125.2'~~
			Tuff 0.1' thick at 126.7'
			Tuff 0.15' thick at 130.1'-130.3'
			Tuff 0.12' thick at 130.6'
			Tuff 0.1' thick at 130.6'
			Tuff 0.1' thick at 130.7'
			Tuff 0.1' thick at 132.3'
			Tuff 0.1' thick at 133.8'

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Slickensides in bedding plane at 136.9', 137.05', 138.2', 138.3', 139.6', 139.8',
			139.95', 140.2' 140.7' 141.4', 142.4',
			Tuff 0.1' thick at 138.1
			Tuff 0.5' thick at 140.2'-140.7'
			Tuff 0.1' thick at 141.0'
			Tuff 0.1' thick at 142.0'
			Tuff 0.1' thick at 146.0'
143.0	204.2		Brown to gray brown moderately rich oil shale with several units of rich dark
			brown oil shale, much tuff or silt intermixed with shale, bedding is thin and
			even with little turbation ~70 percent tuff with mixed and discrete oil shale
			layers from 147.5-147.9', 0.4' thick.
			Bedded massive tuff with very thin shale layers from 149.9' - 150.3', 0.4' thick
			Tuff 0.1' thick at 152.3'
			Tuff 0.75' thick at 156.05-156.8 with minor shale
			Tuff 0.1' thick at 158.1'
			Tuff 0.8' thick at 158.7-159.5
			Tuff 0.7' thick at 162.6-163.3 with minor shale
			Tuff 0.1' thick at 166.1'
			Tuff 0.2' thick at 168.3' - 168.5' with minor shale
			Tuff 0.5' thick at 171.6-172.1
			Tuff 0.1' thick at 172.5'

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Tuff 0.1' thick at 172.8'
			Tuff 0.1' thick at 174.0'
			Tuff 0.1' thick at 175.5'
			Tuff 0.1' thick at 175.8'
			Tuff 0.35' thick at 177.35-177.7
			Tuff 0.45' thick at 178.75' -179.2'
			Tuff 0.4' thick at 181.6-182.0'
			Highly tuffaceous section with shale mixed with tuff
			and/or silt - 183.9'-187.4', 3.5' thick
			Tuff 0.9' thick at 187.8' 188.7'
			Tuff 0.1' thick at 189.7'
			Tuff 0.15' thick at 194.95-195.1
			Tuff 0.3' thick at 195.3-195.6
			Tuff 0.15' thick at 197.0-197.15
204.2	232.0		Zone of gray siltstone with minor oil shale and probably abundant tuff. The
BOTTOM	OF HOLE		rock retains water in this unit. Thin pyrite rich layers common.
			Tuff 0.1' thick at 207.5'
			Tuff 0.2' thick at 217.4-217.6

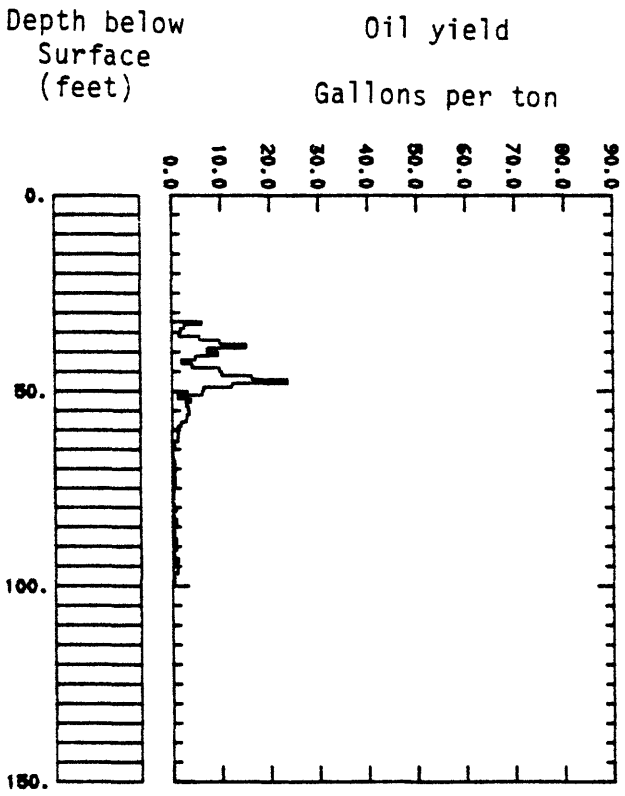
1/ "a"--indicates specific gravity estimated as 0.92.

U.S. Geological Survey

Core hole 78-1A



Corehole 78-1A
Logged by Robert Johnston

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
32.2	37.0		Light gray very low grade shale
37.0	39.0		Medium gray moderately rich oil shale
39.0	39.2		Tan sandstone with traces of carbon trash
39.2	39.4		Brownish gray moderately rich oil shale
39.4	39.6		Tuff or siltstone (not sure)
39.6	41.3		Light gray to black, moderately rich oil shale
41.3	43.5		Whitish gray to medium gray very lean shale
43.5	46.5		Brown to black crumbly oil shale
46.5	48.7		Hard, medium gray oil shale
48.7	50.9		Medium gray to brown rich oil shale - crumbly in sections
50.9	51.3		Light brown shale marbled with coarse grain silt
51.3	52.0		Light gray lean oil shale - hard
52.0	52.4		Tuff - numerous dingy white layers of coarse grained material.

Corehole 78-1A (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
52.4	62.5		Hard, light gray, lean oil shale
62.5	62.7		Tuff - dingy white coarse grained layer
62.7	72.4		Hard, light gray, lean oil shale
72.4	77.8		Hard, more heavily banded, light gray oil shale (lean)
77.8	80.0		Tuff
80.0	90.4		Light gray moderately rich oil shale with intermittent zones of crumbly water absorbent shale.
90.4	93.0		Intermingled tuff layers with moderately rich oil shale
93.0	100.2		Gray, lean oil shale.

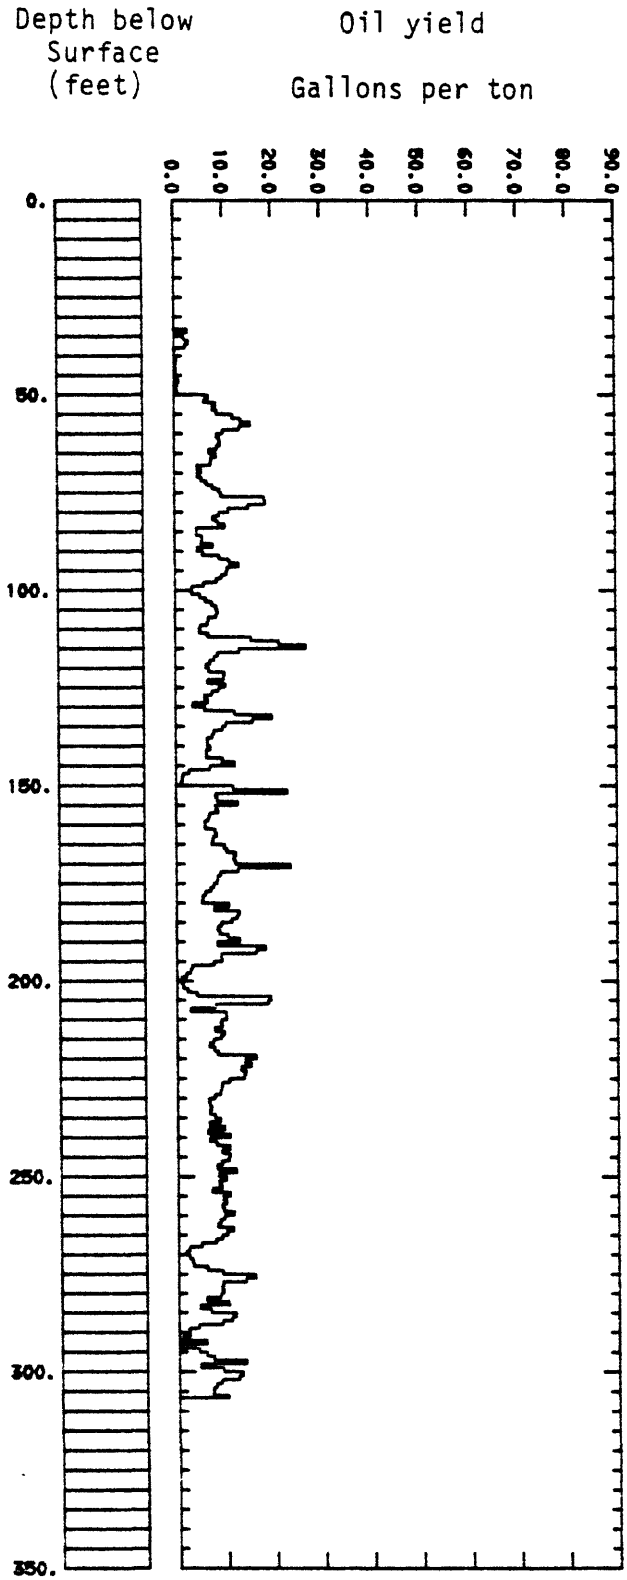
"a"--indicates specific gravity estimated as 0.92.

Figure 3.--Map showing location of core hole 78-2. Base from No Name Ridge Quadrangle (1952). Scale 1:24,000.

U.S. Geological Survey

Core hole 78-2



Corehole 78-2
Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
23.4	27.8	4.4	Lean medium gray partly weathered oil shale, upper part thinly bedded with dips of up to 50°, lower part highly turbated and folded. Tuff 0.2' thick at 27.5' to 27.7'
27.8'	33.1'	5.3	Broken up rock, drilled out
33.1	-40.2	7.1	Gray brown medium rich oil shale, highly tuffaceous with contorted and steeply dipping bedding up to 50° ripple markes in lower foot.
40.2	50.9	Dark	brownish gray oil shale, highly tuffaceous with horizontal but somewhat disturbed bedding. Thick descrete tuffs: 40.2- 40.5', 0.3' thick; 42.0' - 42.9', 0.9' thick; 43.0-43.3', 0.3' thick; 49.4' 49.7', 0.3' thick; 46.4' - 47.25 lost at top of 3rd core
50.9	76.2		Gray brown moderately lean oil shale, less tuffaceous than above units. Even, horizontal, but turbated bedding tuff 0.05' at 53.8'; tuff 0.05' at 56.6' Rich brown oil shale from 56.8' - 59.7'
76.2	79.1		Dark brownish gray moderately rich oil shale, interbedded with minor tuff. Tuff 0.05' thick at 77.4'
79.1	115.1		Same as interval 50.9-76.2' - tuff 0.05' thick at 88.1'

Corehole 78- 2 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
115.1	117.0		Rich oil shale with tuff, thinly bedded, little turbation tuff 0.05' thick at 118.1. Some leaner oil shale mixed in.
117.0	150.7		Same as interval 50.9- - 76.2'. Tuff 0.05' thick at 119.2; Rich oil shale dark brown 0.1' thick at 132.7'; rich oil shale 132.3 - 133.6 interbedded with moderately rich oil shale and tuff. Tuff 0.05' thick at 135.0'. Rich oil shale 143.6' - 144.4' with tuff.
150.7-	151.5		Rich dark brown thinly bedded oil shale.
151.5	156.4		Medium rich oil shale thinly bedded with moderate turbation. Tuff 0.05' thick at 153.3'. Tuff, turbated 0.05' thick at 154.2'. Tuff turbated 0.05' thick at 156.0'.
156.4	170.2		Same as interval 50.9'-76.2' medium grade oil shale. Tuff with minor oil shale 0.1' thick at 158.3'. Tuff with minor oil shale 0.4' thick 159.8-160.2'. Tuff, turbated 0.05' thick at 160.9', Tuff 0.5' thick at 164.6' and 164.7' and 165.9' and 168.3' and 170.2'.
170.2	171.7		Dark brown rich oil shale with abundant tuff. Tuff 0.15' thick at 170.9-171.05'
171.7	191.3		Medium rich oil shale, thinly bedded with little turbation. Tuffs common. Tuff 0.2' thick 179.3-179.5; tuff 0.1' thick at 181.2; tuff 0.1' thick at 181.3; tuff 0.2' thick at 185.0-185.2; tuff 0.3' thick at 187.3-187.6.

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
191.3	192.5		Rich dark brown oil shale interbedded with pink and gray tuff. Tuff 0.05' thick at 192.2'
192.5	208.1		Medium rich brown to gray brown oil shale, thinly bedded with little turbation. Tuffs very common. Tuff 0.07' thick at 195.3; tuff with minor oil shale 0.2' thick at 196.1- 196.3. Tuff 0.06' thick at 196.9'; tuff 0.05' thick at 197.5; tuff 0.05' thick at 197.6; Tuff 0.15' thick from 198.0-198.15; tuff 0.05' thick at 198.3; tuff 0.05' thick at 198.4; tuff 0.05' thick at 198.5; tuff 0.1' thick at 199.0; tuff 0.2' thick at 199.2'- 199.4'; rich oil shale, dark brown interbedded with tuff 204.2'-205.5'. Tuff 0.15' thick 205.05-205.2; tuff 0.06' thick at 207.0; thick tuff with minor oil shale toward top 0.8' thick from 207.3-208.1'.
208.1	217.1		Dark brown rich oil shale thinly bedded wtih little turbation. Tuff 0.05' thick at 212.7' tuff 0.07' thick at 213.5'; tuff 0.05' thick at 215.5'; tuff 0.08' thick at 216.3; tuff 0.1' thick at 217.0.
217.1	256.4		Brown, dark gray brown, moderately rich oil shale with turbation in parts. Horizontal thin bedding with abundant tuff. Tuff 0.05' thick at 217.6; tuff 0.1 thick at 218.8'; tuff 0.2' thick at 219.1-219.3'; tuff 0.4' thick at 220.6-220.9'; Turbated tuff 0.1' thick at 227.0' tuff 0.07' thick at 230.0'; turbate' tuff 0.2' thick at 230.8-231.0; tuff 0.15' thick at 231.2-231.35; tuff 0.08' thick at 232.3'; tuff0.08' thick at 232.8'; tuff 0.06' thick at 232.9'; tuff 0.1' thick at 233.4'; tuff 0.15' thick at 233.5 to 233.65'; tuff 0.05' thick at 233.7; tuff 0.09' at 234.0; tuff 0.07 thick at 234.5; tuff 0.05' thick at 234.9'; tuff 0.08'

Corehole 78-2 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			thick at 235.7'; tuff 0.2' thick at 235.85-236.05; tuff 0.1' thick at 236.0; tuff 0.15' thick at 236.6-236.75' tuff 0.25'- thick at 236.9' - 237.15'; tuff 0.2' thick at 237.9-238.1 with minor oil shale; tuff 0.35 thick at 238.1-238.45' Tuff turbated with oil shale from 238.6-239.4, 0.8' thick. Tuff, largely massive from 239.4 - 241.4; 2.0' thick. Tuff 0.1' thick at 241.5' tuff 0.05 thick at 241.6' tuff 0.05 thick at 241.7; tuff 0.15 thick at 241.8-241.95. tuff 0.08' thick at 243.7; tuff 0.05' thick at 244.8'; tuff 0.05' thick at 245.4' tuff 0.15' thick at 246.7-246.85'; tuff 0.2' thick at 248.4-248.6' tuff 0.12' thick at 248.7-248.82; tuff 0.25' thick at 249.65-249.9'; tuff 0.05' thick at 250.4'; tuff 0.2' thick at 251.2-251.4 with minor bedded shale; tuff 0.2' thick at 252.3 - 252.5 with minor bedded shale; tuff 0.08' thick at 252.7; tuff 0.1' thick at 253.1'; tuff 0.15' thick at 253.2-253.35; tuff 0.05' thick at 253.8';tuff 0.05' thick at 255.3; tuff 0.15' thick at 256.3' - 256.45'
256.4	264.7		Dark brown rich oil shale with abundant tuff and some leaner oil shale. Thinly bedded with little turbation. Tuff 0.15' thick at 257.25-257.4. Six or more tuffs, tuff ~70 percent oil shale ~30 percent 257.5-258.1; Tuff 0.4' thick at 258.35 - 258.75 with minor oil shale; tuff 0.7' thick at 259.3-260.0 with minor oil shale; tuff 0.1' thick at 260.1' ; tuff 0.08' thick at 263.4'; tuff 0.1' thick at 263.7';

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
264.7	278.2		Brown to gray brown moderately rich oil shale, thinly bedded with little turbation. Tuffs abundant. Tuff 0.07' thick at 265.5'; tuff 0.12' thick at 266.8'; tuff 0.08' thick at 268.4'; 50 percent thin tuffs from 268.6-270.9; tuff 0.06' thick at 273.2'; tuff 0.1' thick at 274.2'; 275.3'-276.7' rich brown oil shale interbedded with tuff and leaner oil shale. Tuff 0.15' thick at 277.45-277.6' with minor shale.
278.2	306.6		Brown to dark brown oil shale, rich, thinly bedded with generally little turbation. Abundant tuff, some leaner oil shale; tuff 0.05' thick at 279.4'; tuff 0.05' thick at 280.9'; tuff 0.3' thick at 281.6-281.9'; tuff 0.15' thick at 282.7 - 282.85'; tuff 0.1' thick at 283.0-283.1; tuff 0.2; thick at 283.15-283.35; tuff 0.3' thick at 283.4-283.7; tuff 0.55' thick at 283.95-284.5; tuff 0.15' thick at 283.6-283.75; ~50 percent numerous tuffs interbedded with and turbated with oil shale 284.8 - 287.3'; ~~Tuff 287.5-292.3' with minor oil shale in upper foot 4.8' thick total; tuff 0.2' thick with minor shale, turbated from 292.5-292.7; tuff 292.85 - 294.5, 1.65' thick; ~70 percent tuff, 30 percent oil shale from 294.5- 295.0; tuff pink and gray from 295.0-296.7, 1.7' thick;~~ tuff 0.1' thick at 297.0; tuff 0.15' thick at 297.1-297.25; tuff 0.1' thick at 297.5; tuff 0.75' thick at 298.35-299.1; tuff 0.2' thick at 299.15-299.35; ~~tuff 0.15 thick at 299.5-299.65;~~ tuff 0.08' thick at 300.05-300.13; tuff 0.1' thick at 301.0' pinkish tan color, no gray; tuff 0.5' thick at 301.8-302.3'.

306.0	306.6	3.9	1.1	94.2	.8	10.1	2.6	.929

1/ "a"--indicates specific gravity estimated as 0.92.

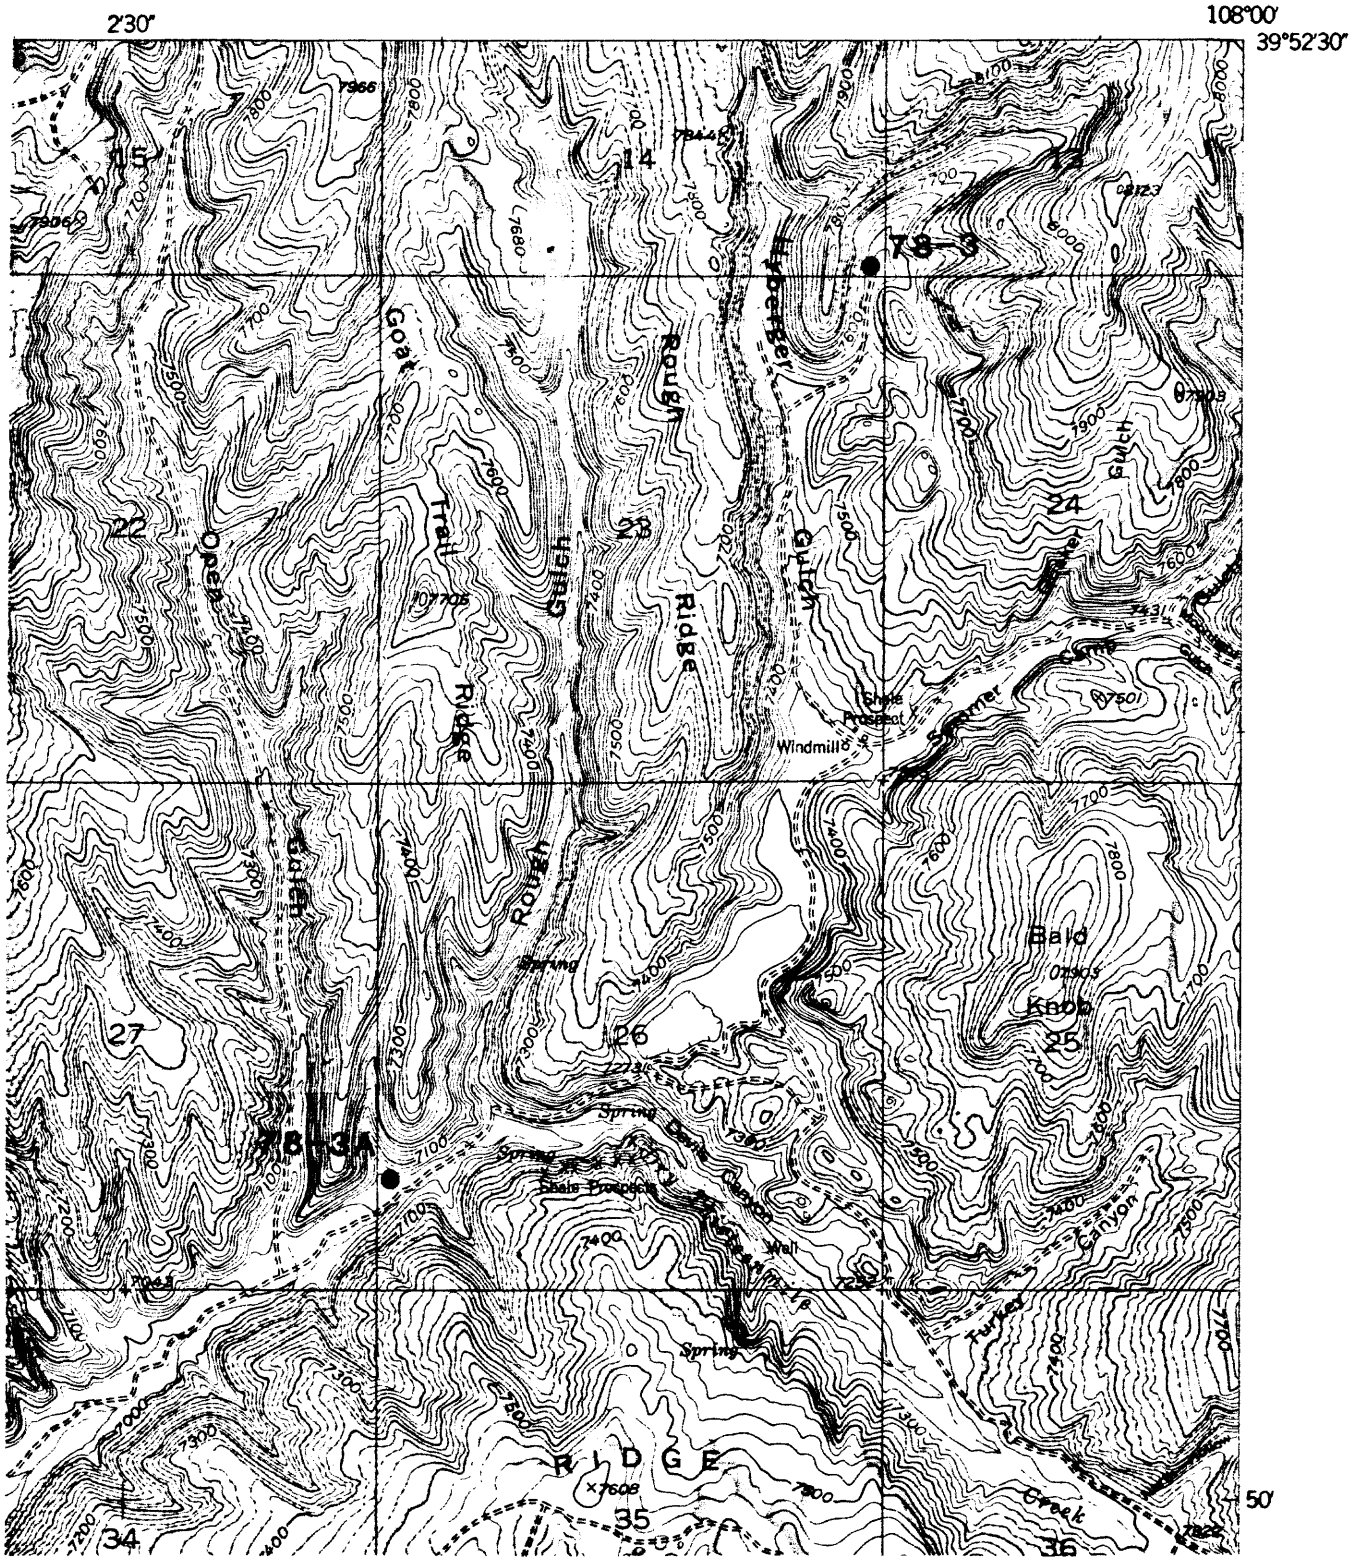

Figure 4.--Map showing location of core holes 78-3 and 78-3A. Base from No Name Ridge Quadrangle (1952). Scale 1:24,000.

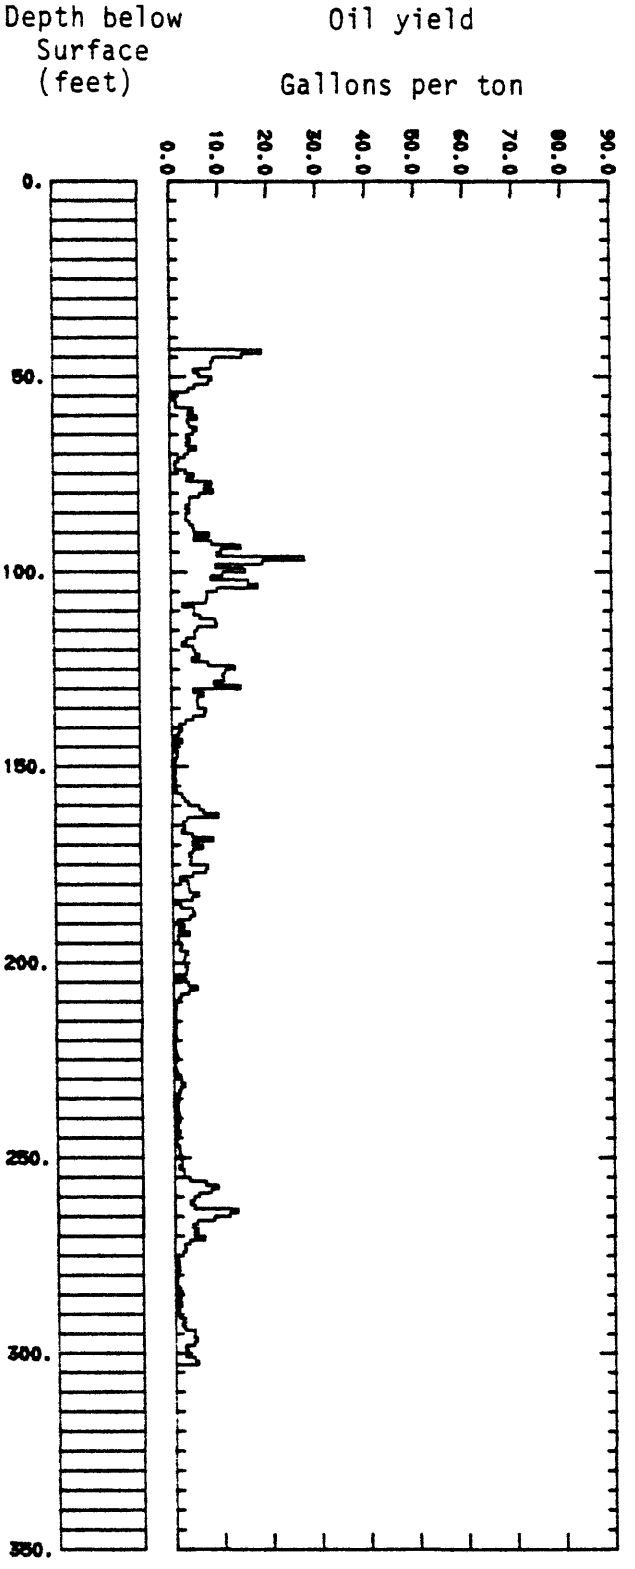
U.S. Geological Survey

Core hole 78-3



Corehole 78-3
Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
43.0	77.7		Moderately rich oil shale with much admixed tuff or silt. Color is brown to
			brownish gray. Thin, even bedding
			with turbation in parts.
			Tuff 0.1' thick at 45.8'
			Tuff 0.75' thick at 63.9-64.65
			Vertical fractures 72-74'
77.7	220.0		Brown to dark brown oil shale interlayered and mixed with much tuff. Abundant
			silt is possible
			Tuffaceous zone with thin tuffs interlayered with rich oil shale.
			78.3 - 79.0', 0.7' thick
			Dark brown oil shale with other things 92.6' - 94.6, 2.0' thick
			Dark brown oil shale with other things 95.7 - 98.5, 2.8' thick
			Dark brown oil shale with other things 97.8 - 106.5' 8.7' thick
			Tuff 0.1' thick at 92.6'
			Tuff 0.1' thick at 95.2
			Zone weathered to plastic mud 0.07' thick at 100.6'
			Zone ~50percent massive gray tuff 108.4-109.8; 1.4' thick
			Very dark brown oil shale 109.8-109.9, 0.1' thick
			Dark brown oil shale interlayered with tuff and leaner oil
			Shale 112.3' - 113.9' - 1.6' thick
			Tuff 0.1' thick at 116.1
			Tuff 0.2' thick at 118.6 - 118.8'
			Tuff 0.2' thick at 126.2 - 126.4

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Tuff 0.2' thick at 128.2- 128.4
			Tuff 0.1' thick at 129.9
			Tuff 0.2' thick at 130.3- 130.5
			Tuff 0.15' thick at 130.7-130.85
			Fractures: 128' - 130'
			134.5 - 140' highly fractured
			Tuff 0.15' thick at 144.9 - 145.05
			Tuff 0.25' thick at 147.0 - 147.25
			Tuff 0.3' thick at 155.3 - 155.6 with some oil shale
			Tuff 0.1' thick at 156.4
			Tuff 0.5' thick at 157.6-158.1 turbated with oil shale
			Tuff 0.1' thick at 163.2'
			Tuff 0.1' thick at 164.7'
			Tan tuff 0.5' thick at 169.3-169.8 with some oil shale
			Dark brown rich oil shale interbedded with leaner oil shale and tuff 160.3-162.8,
			2.5' thick
			168.6-170.5, 1.9' thick
			Tuff 0.1' thick at 174.4
			Tuff 0.3' thick at 176.7- 177'
			Tuff 0.15' thick at 177.4 - 177.55
			Tuff 0.1' thick at 177.7 - 177.8
			Tuff 0.1' thick at 178.2'
			Tuff 0.2' thick at 186.5-186.7 with mixed oil shale
			Tuff 0.3' thick at 187.0-187.3 with mixed oil shale

Corehole 78-3 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Dark brown rich oil shale with tuff 186.8 - 187.6, 0.8'
			Tuff 2.25' thick at 187.6-189.85 with minor mixed shale
			Tuff 0.1' thick at 189.9
			~60 percent massive tuff zone 190.1-191.3, 1.2' thick with 40 percent dark
			brown oil shale
			Tuff 0.15' thick at 191.85'-192.0
			Tuff 0.15' thick at 192.2-192.35'
			Tuff 0.2' thick at 193.5 - 193.7'
			Tuff 0.15' thick at 197.8-197.95
			Tuff 0.25' thick at 199.85-200.1' with minor shale
			Tuff 0.15' thick at 203.15 - 203.3'
			204.0-205.5' highly fractured
			Tuff 0.15' thick at 205.6-205.75'
			Tuff 0.1' thick at 206.2
			Tuff 0.1' thick at 206.7
			Tuff 0.18' thick at 210.0'210.18'
			Tuff 0.2' thick at 210.9-211.1
			Tuff 0.1' thick at 215.3'
			Tuff 0.1' thick at 215.5'
			Tuff 0.45' thick at 216.6-217.05 with mixed shale
			Tuff 0.4' thick at 218.0-218.4 with mixed shale
			Tuff 0.1' thick at 218.9'
			Tuff 0.2' thick at 220.0' - 220.2'

Corehole 78-3 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
220.0	255.5		Gray to brown oil shale mixed and bedded with much silt or/and tuff. Oil Shale
			is lean to moderate. Generally evenly bedded with little turbation
			Tuff 0.2' thick at 234.2'-234.4'
			Tuff 1.0' thick at 235.2-236.2'
			Tuff 0.1' thick at 238.3
			Tuff 0.1' thick at 240.9'
			Tuff 0.15' thick at 242.05-242
			Tuff 0.15' thick at 245.1-245.25
			Tuff 0.2' thick at 245.4-245.6'
			Tuff 0.3' thick at 252.6-252.9 with some shale
			Tuff 0.15' thick at 254.5'
255.5	273.4		Gray brown to brown oil shale moderately lean with less silt than above unit.
			Shale is somewhat fissile.
			Some parts brown to dark brown oil shale with interlayered tuff.
			Dark brown oil shale with abundant thin tuff layers near base, 256.7-258.4
			Tuff 0.1' thick at 264.3'
273.4	302.9		Similar to interval 220.0 - 255.5'
			Tuff 0.1' thick at 276.5'
			Tuff 0.1' thick at 289.6'

Corehole 78-3 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Tuff 0.1' thick at 291.5'
			Tuff 0.1' thick at 292.1'
			Tuff 0.1' thick at 292.5'
			Tuff 0.15' thick at 292.7-292.9'
			Tuff 0.1' thick at 300.1'

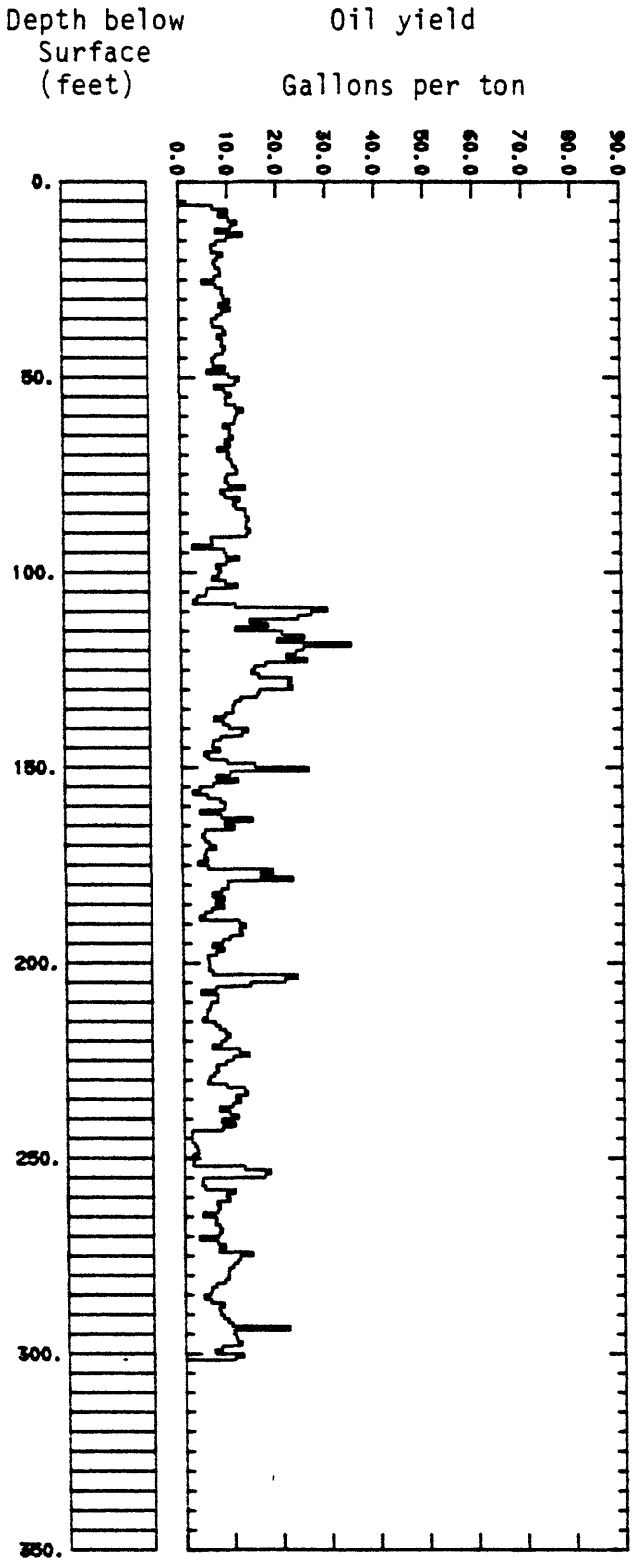
1/ "a"--indicates specific gravity estimated as 0.92.

U.S. Geological Survey

Core hole 78-3A



Corehole 78-3A
Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
6.0	6.8		Gray-brown medium rich oil shale
6.8	7.0		Brown clay
7.0	91.5		Light brown medium rich oil shale - gradually becoming leaner 60.2 - 60.3 leach zone 66.7 - 66.8 leach zone 71.0 - 75.0 fracturing
91.5	93.6		Gray-brown lean oil shale carbonized leaf fragments incorporated. Contains iron sulfides, turbated with irregular bedding, sharp above and below contacts.
93.6	107.9		Light brown oil lean shale with bedding irregular and in parts disturbed, commonly at angles up to 40° from horizontal. Some layers rich in pyrite, fractures have a film of dark brown oil.
107.9	131.3		Interbedded light gray (silty?) to brown oil shale, brown layers are lean. Bedding and contacts are irregular with common recumbant isoclinal folding less turbated toward bottom.
131.3	139.0		light brown lean oil shale, evenly and thinly bedded in most parts, some with contortion of layers. Darker brown layers rare and thin

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
139.0	140.1		Brown lean oil shale alternating with light brown and silty (?) layers thinly and evenly bedded, undisturbed.
140.1	147.8		Light gray brown lean oil shale with thin darker and silty beds. Bedding relatively undisturbed.
147.8	149.8		Brown layers alternating with tan and light brown layers. Bedding is uneven and somewhat disturbed. Brown layers are lean without oil film in fracture.
149.8	173.7		Light brown to gray lean oil shale, thinly to irregularly bedded beds dipping at angles up to ∽20°.
173.7	180.6		Brown lean oil shale interbedded with white, tan, and tannish pink layers. Beds are irregular and disturbed with folding in parts.
180.6	299.7		Light gray brown lean oil shale thinly bedded with disturbed areas. Some light gray layers, some with pyrite, silty or dolomitic beds common. Darker brown ~~---------- between 201.2 and 202.1. Tuff lean, thick at 201.35. Tuff 0.2' thick at 218.2'. 220.3' to 221.5' beds of darker brown oil shale interbedded with lighter brown and tan shale beds. Tuff(?) 0.09' thick at 220.3'. Oil oozing from~~ fractures from 227.9' - 229.0 in lean shale. ~~Tuff 0.2' thick at 234.1', tuff 0.2' thick 236.1'. Interbedded dark brown lean oil shale, gray to tan oil shale, and~~ tuff with silty and/or dolomitic beds from 238.5' to 239'. ~~Brown lean oil shale~~ interbedded with lighter shale from 250.4' to 253.0 darker than rest of core.
BOTTOM OF HOLE			

Corehole 78-3A(Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			0.4' soft brown siltstone at 264.1-264.5, oil free. 0.3' grayish brown siltstone at 0.7' dark brown to cream colored siltstone with minor lean oil shale, contorted in upper part with solution pits of salts. Gray siltstones with included chips of lean oil shale 0.3' at 280.1- 280.4.; 0.1' at 281.0-281.1; 0.4' at 281.5-281.9' 0.8' at 283.6 - 284.4. Gray siltstone interbedded and turbated with brown lean oil shale from 292.0-294.4'.

1/ "a"—indicates specific gravity estimated as 0.92.

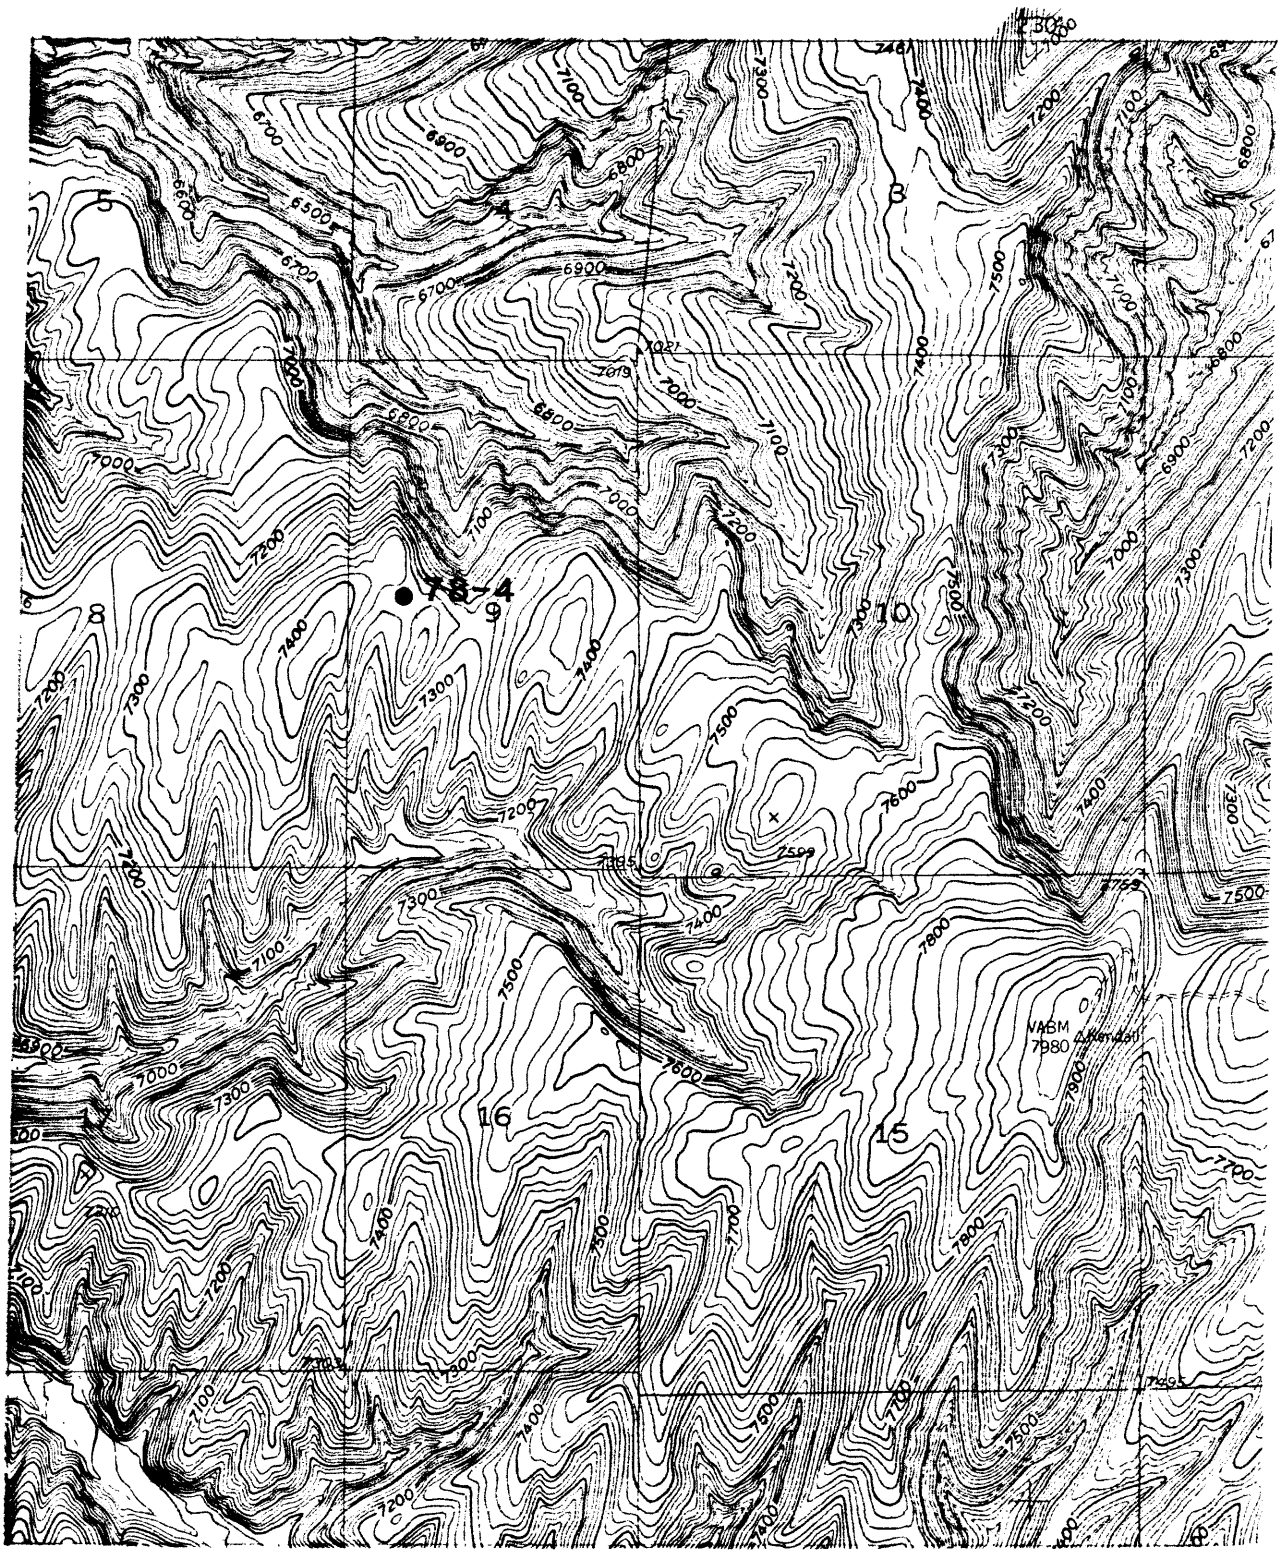

Figure 5.--Map showing location of core hole 78-4. Base from Segar Mountain Quadrangle (1952). Scale 1:24,000.

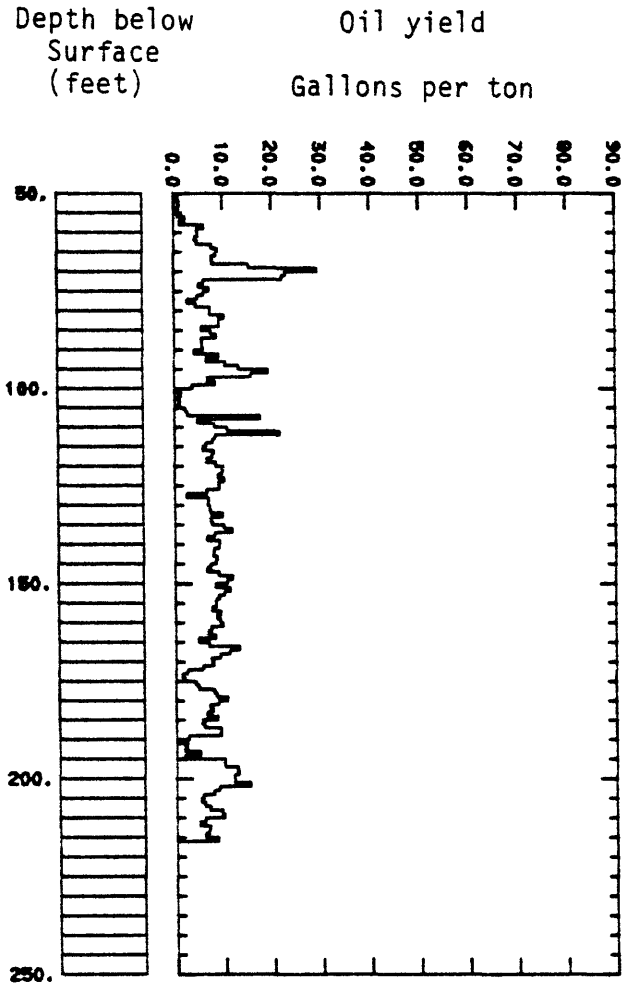
U.S. Geological Survey

Core hole 78-4



Corehole 78-4
Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
20.0'	50.5'		Gray to oxidized yellow brown fine to coarse grained sandstone and siltstone
			interbedded with minor silty shale. Calcite cemented with disturbed, irregular
			bedding. Pyrite nodules common. Most parts porous and water saturated.
50.5'	69.1'		Light-gray to tan silty shale and siltstone with thin but irregular and
			disturbed bedding. Calcareous.
69.1'	71.9'		Brown lean silty oil shale. Thinly bedded with little turbation.
			Noncalcareous.
71.9'	106.2'		Brown to tan thinly bedded shale, possibly with small amounts of oil. Little
			turbation with some tuffs. Calcareous perhaps with some silt.
			Tuff 0.2' thick at 77.7'-77.9'
			Tuff 0.2' thick at 85.8'-86.0'
			Tuff 0.6' thick at 88.7'-89.3' with minor shale
			Tuff 0.25' thick at 90.5'-90.75' with minor shale
			Dark brown bed without smell of oil, otherwise similar to rest of this unit,
			93.7'-97.0', 3.3' thick.
			Tuff 0.1' thick at 96.7'
			Tuff 0.1' thick at 100.1'

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Fine-grained calcite cemented sandstone 0.4' thick at 102.8'-103.2'
			with crossbedding
106.2'	220.0		Brown to dark-brown oil shale, lean and somewhat calcareous. Thinly bedded
			with little turbation. Somewhat silty in parts. Carbonized plant impressions
			common.
			Dark-brown moderately lean oil shale 0.4' thick at 107.5'-197.9'
			Dark-brown moderately lean oil shale 0.7' thick at 111.2'-111.9'
			Well sorted gray siltstone 0.3' thick at 121.1'-121.4'
			gray siltstone 0.3' thick at 122.1'-122.4'
			Sandstone and gray siltstone 0.6' thick at 127.4'-128.0'
			Sandstone and gray siltstone 1.1' thick at 137.3'-138.4' with some shale
			Sandstone and gray siltstone 0.1' thick at 139.3'
			Sandstone and gray siltstone 0.3' thick at 154.1'-154.4' with some shale
			Sandstone and gray siltstone 0.2' thick at 156.2'-156.4'
			Sandstone and gray siltstone 0.4' thick at 161.7'-162.1' with some shale
			White siltstone 0.1' thick at 162.8'
			Gray siltstone 0.1' thick at 164.5'
			Sandstone 0.1' thick at 171.1'
			Tuff 0.1' thick at 172.2'
			Unit of sandstone, gray and coarse grained with shale beds and parts with shale
			chips. Calcite cemented with most parts porous and water saturated with others
			massive 6.1' thick at 188.7'-194.8'

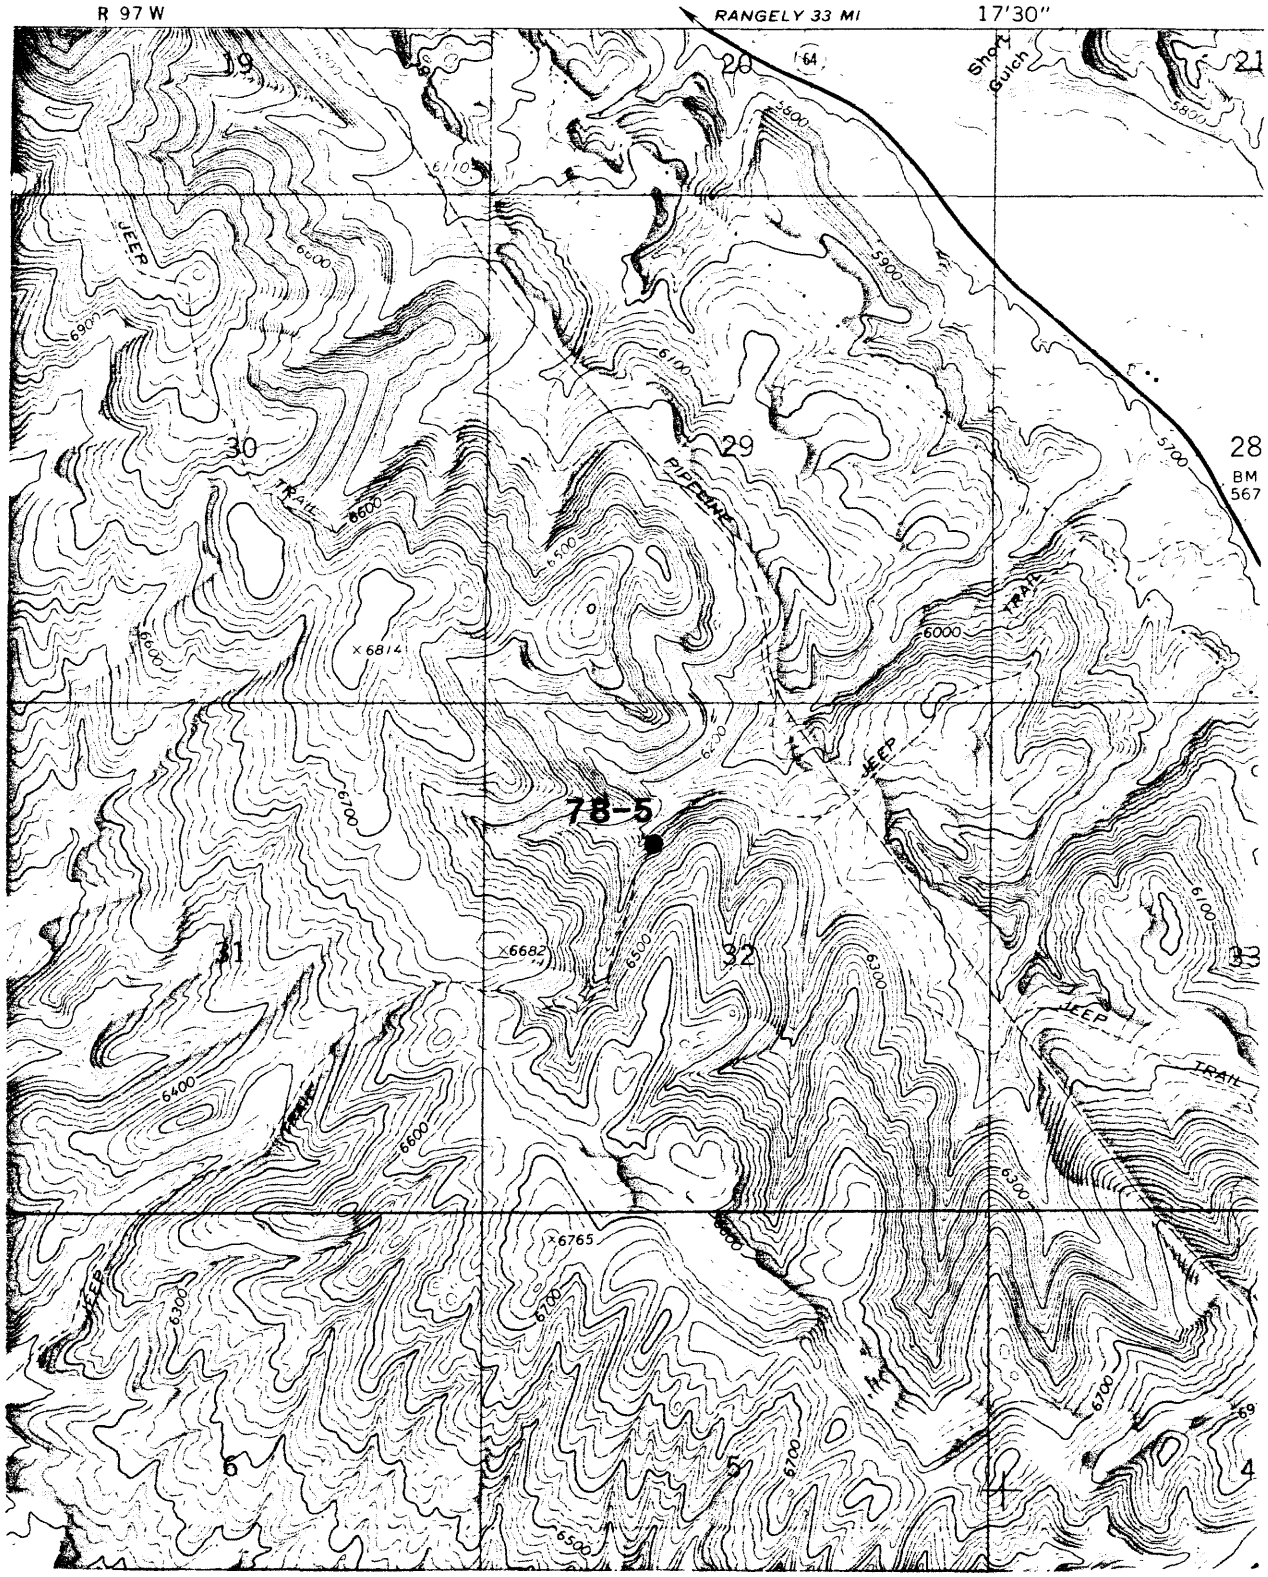

Figure 6.--Map showing location of core hole 78-5. Base from Barcus Creek SE. Quadrangle (1966). Scale 1:24,000.

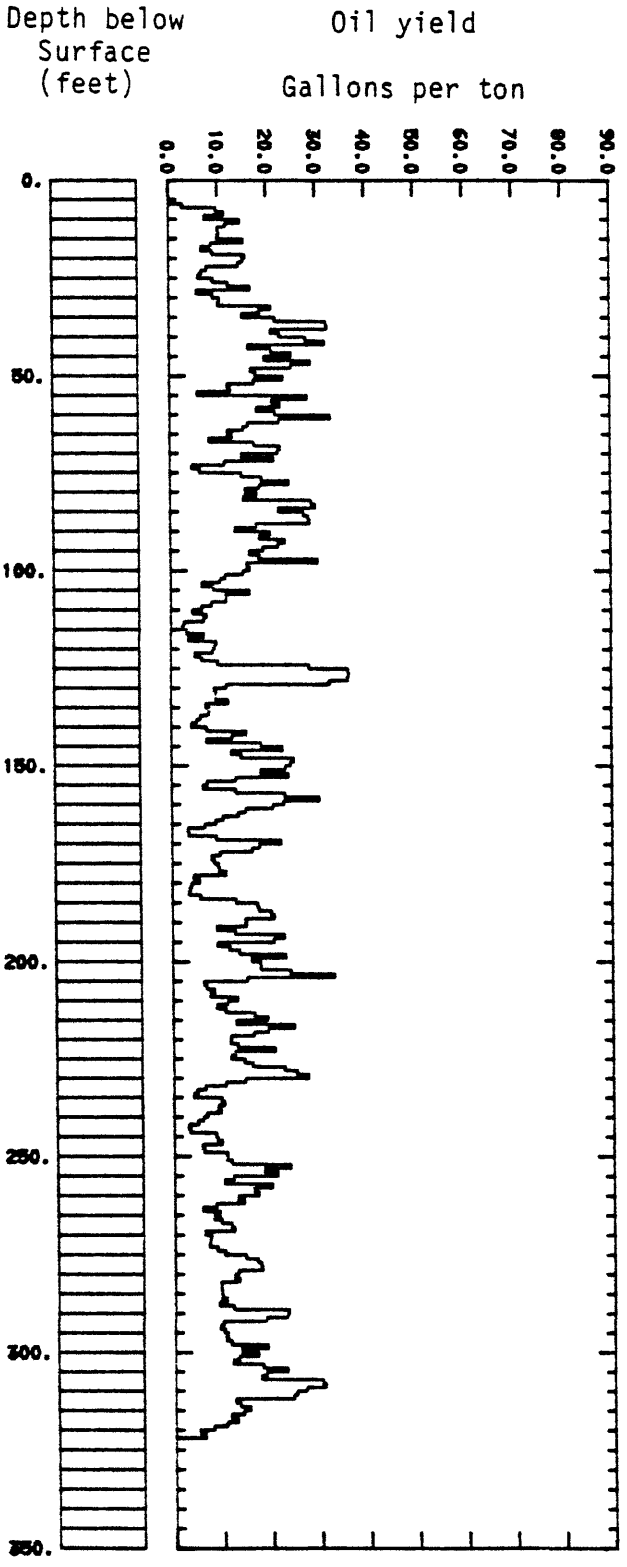
U.S. Geological Survey

Core hole 78-5



Corehole 78-5

Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
6.0'	30.9'		Brown to light brown weathered shale, generally thinly bedded with some turbation. Smells of oil below ~12.0'.
			Tuff (?) 0.2' thick at 7.6'-7.8'
			Tuff (?) 0.1' thick at 7.9'
			Clay 0.2' thick at 11.8'-12.0'
			Tan calcitic layer with shale chips, 0.2' thick at 25.5'-25.7'
30.9'	97.1'		Brown to dark-brown rich oil shale thinly bedded with some turbation. Units common with chips or lenses of dark-brown rich oil shale in a lighter colored matrix, and vice versa. Generally calcareous. Tuffs common, few gray-clay rich shale layers
			Tuff 0.2' thick at 37.3'-37.5' with minor shale
			Tuff 0.1' thick at 38.7'
			Tuff 0.2' thick at 49.3'-49.5'
			Tuff 0.4' thick at 51.0'-51.4' with minor shale
			Tuff 0.1' thick at 55.8'
			Tuff 0.1' thick at 68.1' with minor shale
			Tuff 0.1' thick at 72.1'
			Tuff 0.3' thick at 72.5'-72.8'
			Tuff 0.1' thick at 79.8'

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Tuff 0.2' thick at 93.0'-93.2'
97.1'	177.5'		Dark-gray and gray-brown lean clay rich oil shale with tan lean to brown
			moderately-rich oil shale interbedded. Thinly bedded with some distinct
			tuffs. Virtually noncalcareous.
			Tuff 0.2' thick at 113.4'-113.5'
			Tuff 0.1' thick at 113.8'
			Tuff 0.1' thick at 133.0'
			Tuff 0.2' thick at 146.6'-146.8'
			Tuff 0.1' thick at 147.8'
			Very dark brown rich oil shale, 157.9'-162.2', 5.3' thick
			Tuff 0.1' thick at 165.0'
			Tuff 0.2' thick at 165.6'-165.8'
			Dark-brown rich oil shale 169.0'-172.0', 3.0' thick

Corehole 78-5 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
177.5'	197.8'		Gray to brown somewhat silty shale, lean oil shale. Medium bedding with some tuffs. Somewhat calcareous.
			Tuff 0.1' thick at 181.7'
			Tuff 0.1' thick at 191.5'
			Dark brown moderately rich oil shale 192.8'-194.4', 1.6' thick
197.8'	323.0'		Dark brown thinly bedded oil shale with some light brown oil shale and tuffs.
Bottom	of hole		Very clay rich with some calcite
			Tuff 0.1' thick at 205.7'
			Tuff 0.2' thick at 207.7'-207.9'
			Tuff 0.1' thick at 218.1'
			Tuff 0.2' thick at 222.1'-222.3'
			Tuff 0.2' thick at 236.2-236.5'
			Tuff 0.1' thick at 236.8'
			Tuff 0.1' thick at 245.7'
			Tuff 0.2' thick at 246.8'-247.0'
			Tuff 0.1' thick at 248.4'
			Tuff 0.1' thick at 248.8'
			Tuff 0.2' thick at 250.1'-250.3'
			Tuff 0.2' thick at 253.1'-253.3' with minor shale
			Tuff 0.2' thick at 254.5'-254.7'

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Tuff 0.1' thick at 255.8'
			Tuff 0.1' thick at 256.4'
			Limestone 0.2' thick at 260.8'-261.0'
			Limestone 0.25' thick at 265.8'-266.05' ostrocods?
			Sandstone? 0.3' thick at 268.4'-268.7'
			Limestone 0.1' thick at 271.0'
			Limestone 0.2' thick at 275.6'-275.8'
			Limestone 0.1' thick at 282.3'
			Limestone 0.2' thick at 284.2'-284.4'
			Limestone 0.1' thick at 284.9'
			Limestone 0.3' thick at 287.4-287.7'
			Limestone 0.2' thick at 300.3'-300.5'
			Limestone 0.1' thick at 308.7'
			Limestone 0.2' thick at 309.6'-309.8'
			Limestone 0.1' thick at 311.7'
			Limestone 0.25' thick at 318.95'-319.2'
			The hole was capped with a large stone slab and is in service as a Water
			Resources Division observation and test well. Water production with drilling
			fluid probably began between 50-100' depth and slowly increased with increasing
			depth. At 290' water production dropped off, possibly due to loss in lower
			fractures or fluid back pressure sealing.

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Slickenside ranged in dip from ~10° to 70° most commonly being 20°-50°. Low
			angle dips (20°-30°) are particularly common. Fault striations are usually
			parallel to the dip, rarely perpendicular or oblique.
			Many tuffs, lean marlstones, dolomite, and impure limestones were difficult
			to distinguish due to similar color and texture and some confusion may have
			resulted.

OIL-SHALE ASSAYS BY MODIFIED FISCHER RETORT METHOD

1/ "a"--indicates specific gravity estimated as 0.92.

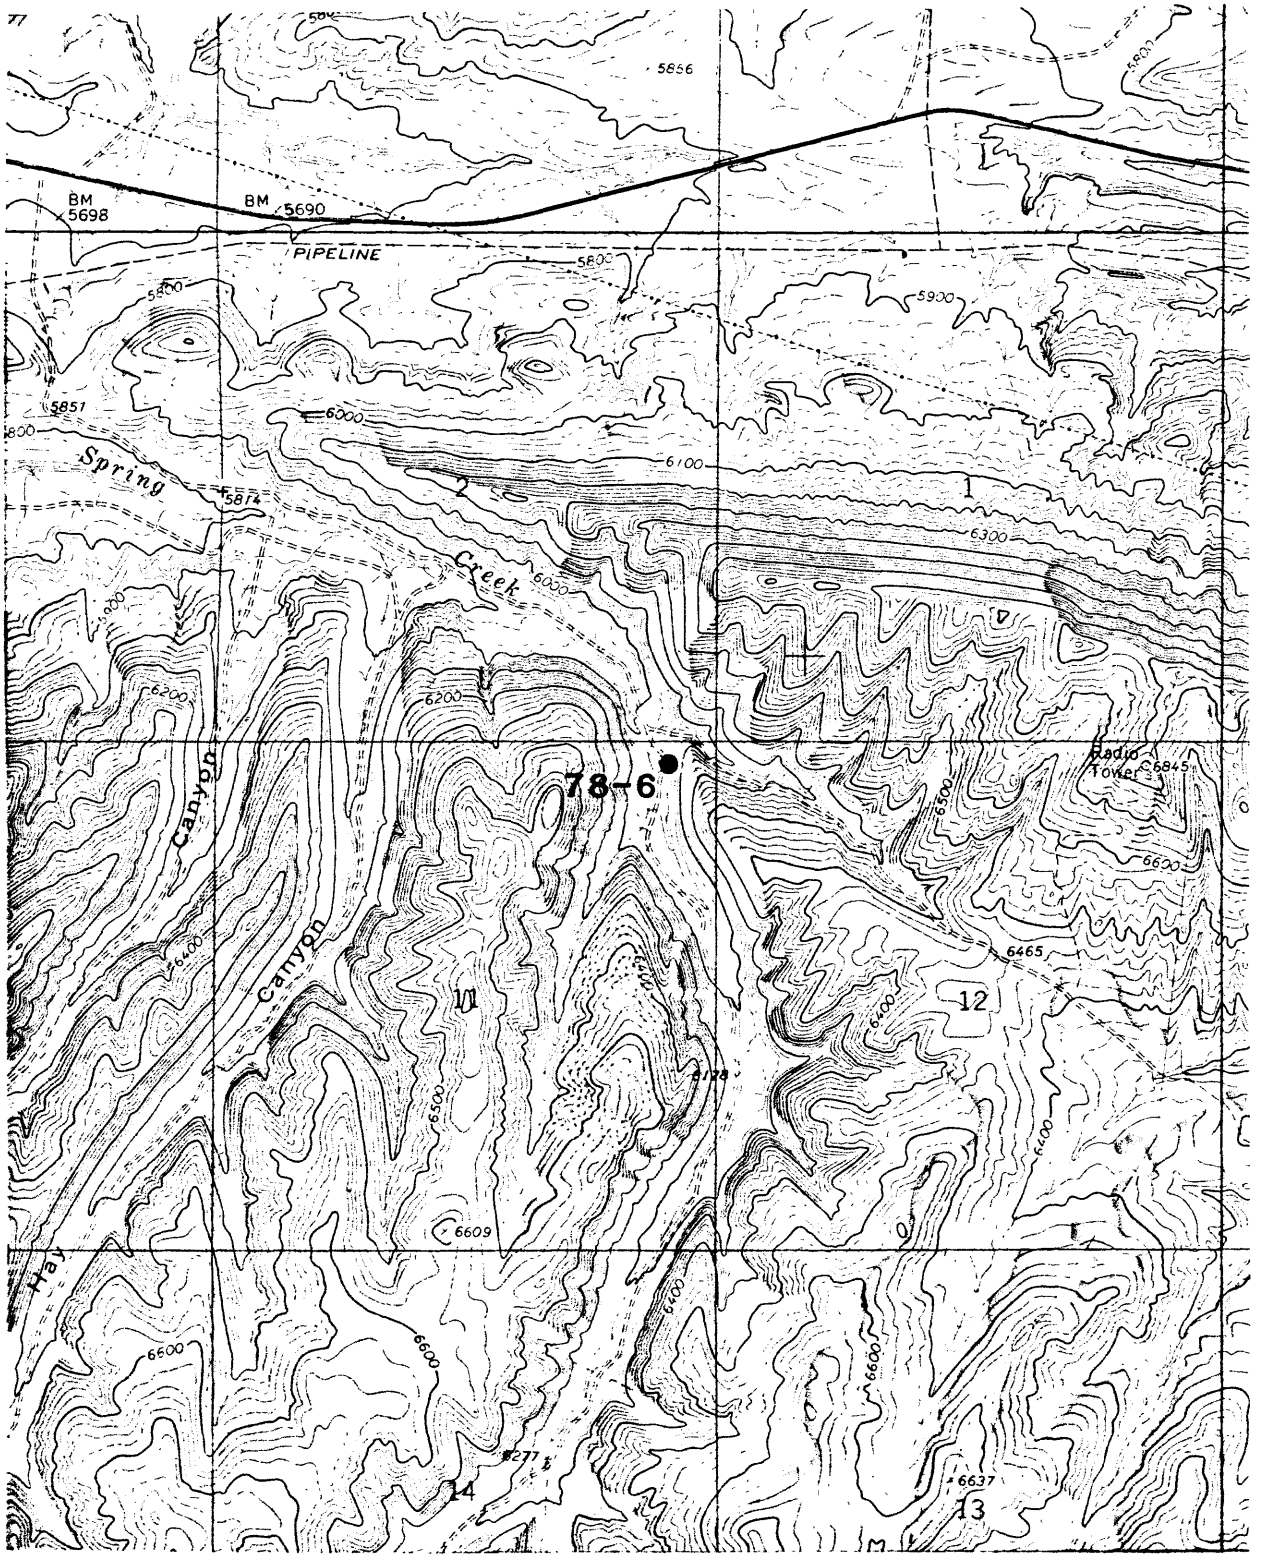

Figure 7.--Map showing location of core hole 78-6. Base from Rough Gulch Quadrangle (1966). Scale 1:24,000.

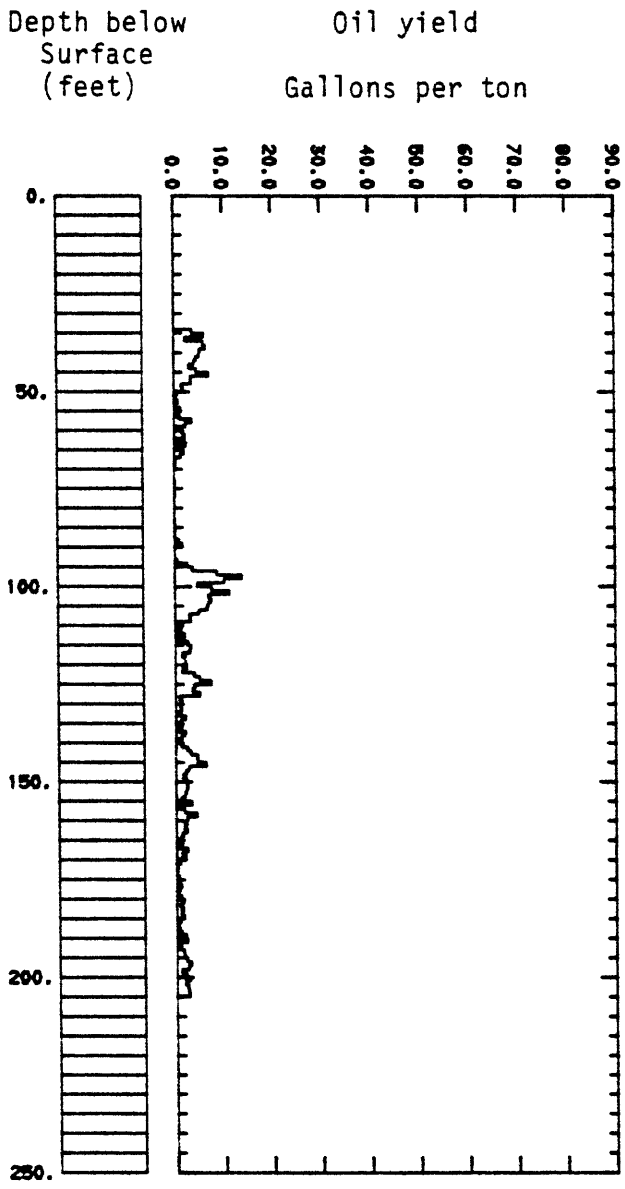
U.S. Geological Survey

Core hole 78-6



Corehole 78-6
Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
34.0	64.0		Brown to dark and gray brown oil shale interbedded
			with abundant tuff. Turbated in parts. Dip of bedding and surface rock
			units ~30° .
			Tuff 0.2' thick at 36.1 - 36.3'
			Tuff 0.1' thick at 36.8'
			Tuff 0.25' thick at 39.5 - 39.75
			Tuff 0.15' thick at 40.8 - 40.95
			Tuff 0.1' thick at 41.9'
			Tuff 0.1' thick at 44.4'
			Tuff 0.1' thick at 46.6'
			Tuff 1.6' thick at 50.6' - 52.2
			Highly tuffaceous zones with thin tuffs interbedded with thin oil shale
			52.2 - 54.6, 2.4' thick
			55.0-56.2', 1.2' thick
			58.5 - 59.1', 0.6' thick
			Tuff 0.4' thick at 54.6 - 55.0'
64.0	93.6		Tuffaceous zone with many thick to thin tuffs interbedded with brown to gray
			brown oil shale ~60 percent tuff
			Massive tuff 0.1' thick at 69.8'
			Massive tuff 0.1' thick at 70.2'
			Massive tuff 1.1' thick at 74.5 - 75.6' minor shale
			Massive tuff 0.1' thick at 76.8
			Massive tuff 0.15' thick at 79.35 - 79.5

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Massive tuff 0.15' thick at 80.6 - 80.75
			Massive tuff 0.1' thick at 83.0
			Massive tuff 0.1' thick at 85.3
			Massive tuff 0.15' thick at 86.0-86.15'
			Massive tuff 0.1' thick at 86.4'
			Massive tuff 0.1' thick at 86.6'
			Massive tuff 0.2' thick at 89.5 - 89.7
			Massive tuff at 3.5' thick at 89.8-93.3
93.6	167.0		Brown and gray to dark brown rich oil shale with abundant interbedded and mixed tuff, thinly bedded with little turbation.
			Tuff 0.15' thick at 96.45' - 96.6'
			Tuff 0.15' thick at 107.05 - 107.2 - Blue when wet.
			Tuff 0.1' thick at 108.9'
			Tuff ~0.3' thick at 121.9 - 122.2
			Tuff 0.2' thick at 134.8 - 135.0
			Tuff 0.3' thick at 136.9-137.2
			Tuff 0.7' thick at 139.2 - 139.9
			Calcite cemented breccia at 144.5'-144.8', 0.3' thick

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Tuff 0.15' thick at 145.5-145.65
			Highly turbated zone with local unconformities and auto-conglomerate of oil shale
			and tuff clasts in a muddy calcific matrix 156.4 to 156.9 , 0.5' thick
167.0	204.8		Highly tuffaceous with brown to gray lean oil shale interbedded with abundant
			tuff. Most tuff is off white creame to tan and light gray. May contain
			abundant silt.
			Tuff 0.1' thick at 170.0
			Tuff 0.1' thick at 170.8
			Tuff 1.4' thick at 170.9-172.3' nearly white in color - turbated at base
			Tuff 2.1' thick at 172.6 - 174.7 with minor shale
			Tuff 0.9 thick at 174.9-175.8
			Tuff 0.3 thick at 176.9-177.2
			Tuff 0.3' thick at 177.9 - 178.2
			Tuff 0.2' thick at 178.5 - 178.7
			Tuff 0.2' thick at 179.1-179.3
			Tuff 0.15' thick at 179.85-180.0
			Tuff 0.3' thick at 180.3-180.6 with minor shale
			Tuff 0.3' thick at 180.9-181.2
			Tuff 0.1' thick at 182.3
			Tuff 0.1' thick at 182.6

Corehole 78-6 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Tuff 0.3' thick at 182.0-182.3
			Tuff 0.15' thick at 185.4-185.55
			Tuff 0.1' thick at 186.0
			Tuff 0.5' thick at 188.9 -≈189.4
			→ ≈0.2' lost from 189.3 - 189.5 ←
			Tuff 0.4' thick at 191.5-191.9
			Tuff 0.4' thick at 204.8 - BOTTOM OF HOLE

1/ "a"--indicates specific gravity estimated as 0.92.

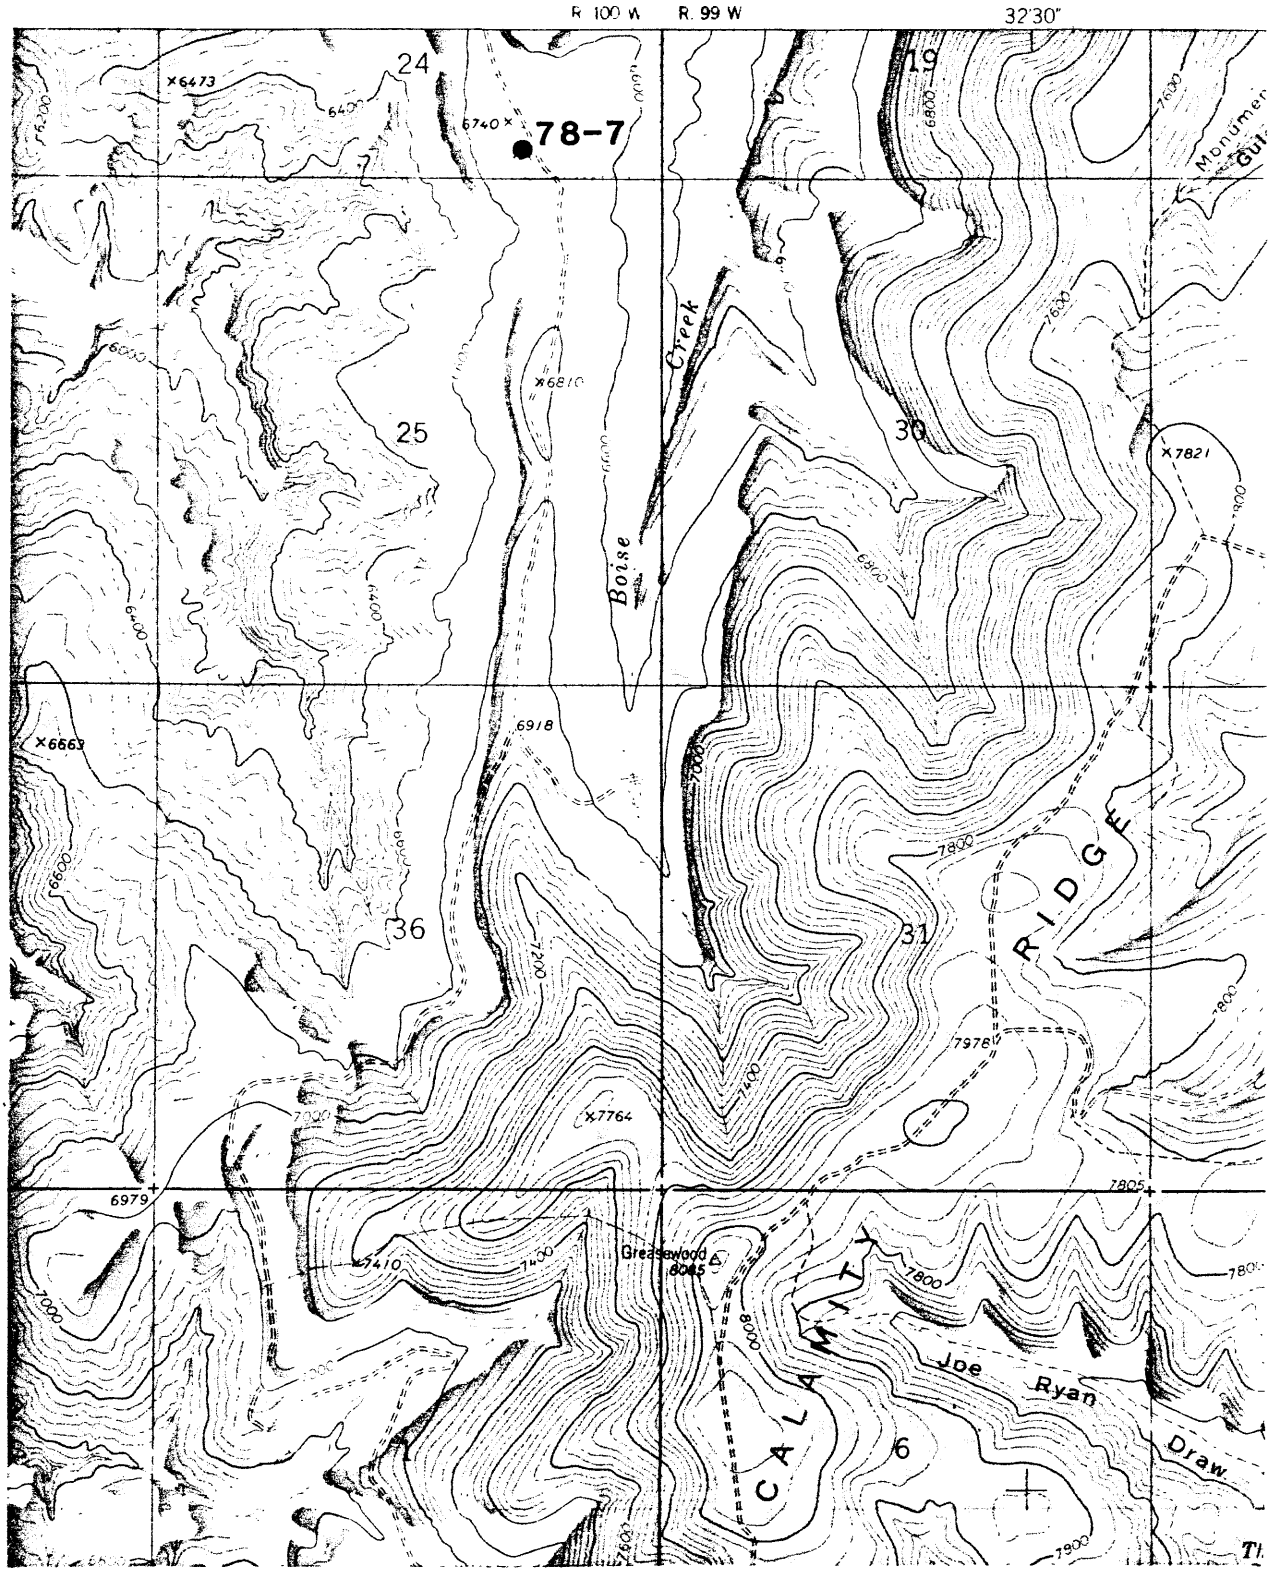

Figure 8.--Map showing location of core hole 78-7. Base from Calamity Ridge Quadrangle (1962). Scale 1:24,000.

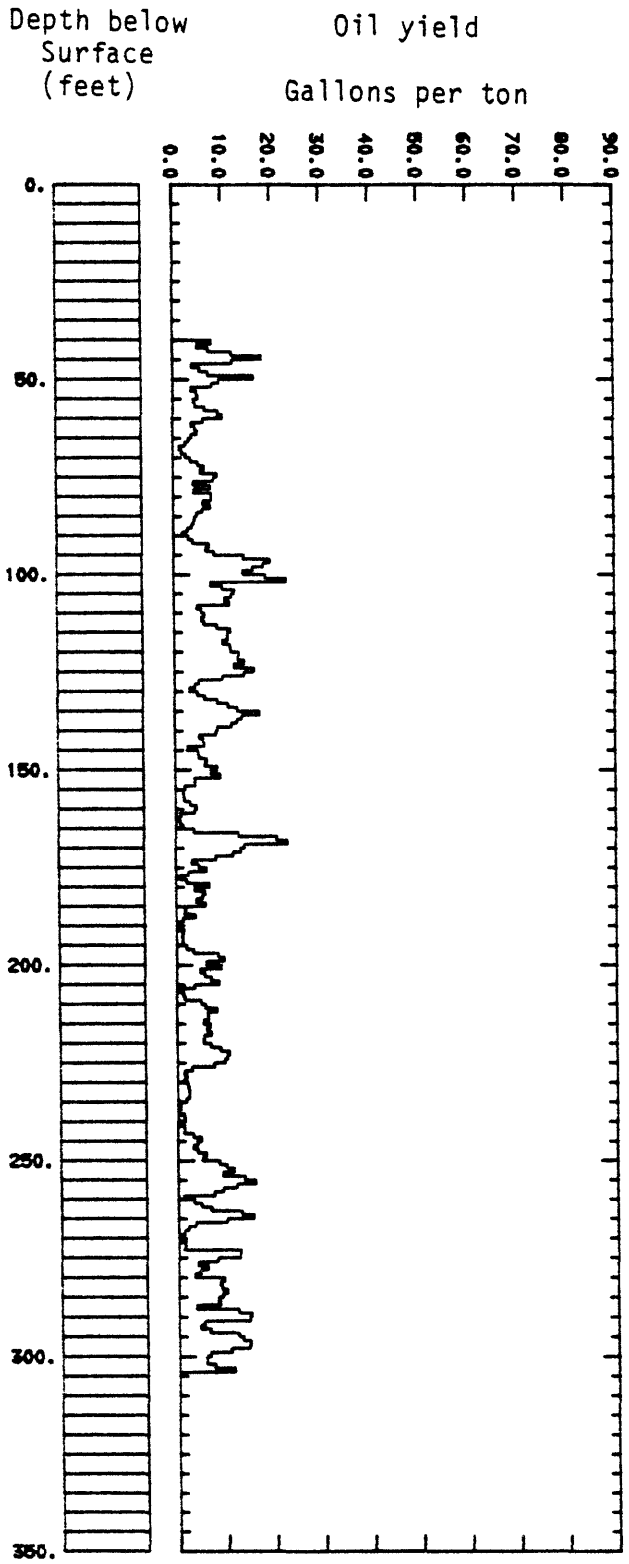
U.S. Geological Survey

Core hole 78-7



Corehole 78-7

Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
40.0	51.7		Dark gray brown to brown rich oil shale alternating with tuffs and gray lean oil shale. Thinly and horizontally bedded with little turbation. Slickensides abundant, generally inclined at ~45°. Slightly weathered
			Tuff 0.1' thick at 42.5
			Tuff 0.15' thick at 43.25 - 43.4'
			Tuff 0.1' thick at 44.6'
			Tuff 0.3' thick at 46.7' - 47.0'
			Tuff 0.1' thick at 48.15' - 48.3'
			Tuff 0.1' thick at 49.8
			Tuff 0.1' thick at 51.5
51.7	89.9		Gray to dark gray and gray brown moderately lean oil shale thinly bedded with little turbation. Slickensides inclined at ~45° common
			Dark brown oil shale alternating with tan tuffs
			from 58.2- 60.2', 2.0' thick
			Tuff 0.1' thick at 60.0'
			Interval 65.0-68.2' highly shattered, probable core loss ~1.2'
			Dark brown rich oil shale alternating with tan tuffs
			from 73.1 - 83.5, 10.4' thick

Corehole 78-7 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Tuff 0.1' thick at 75.3'
			Tuff 0.2' thick at 76.6 - 76.8'
			Tuff 0.1' thick at 78.4'
			Tuff 0.15' thick at 80.85'-81.0'
			Tuff 0.2' thick at 83.9-84.1
89.9	226.5		Dark gray brown and dark brown rich oil shale, thinly bedded with tuffs.
			Tuff 0.15' thick at 106.1-106.25
			Tuff 0.2' thick at 106.6 - 106.8
			Tuff 0.2' thick at 109.0-109.2
			Tuff 0.1' thick at 111.1-111.2
			Tuff 0.2' thick at 112.8-113.0
			112.0' - 112.8' highly fractured
			116.1-118.8 tuffaceous zone with abundant intermixed tan tuff
			Tuff 0.1' thick at 125.6
			Tuff 0.2' thick at 129.5-129.7
			Tuff 0.15' thick at 133.7-133.85
			Tuff 0.15' thick at 140.5-140.65
			Tuff 0.1' thick at 144.5'
			Tuff 0.2' thick at 145.0-145.2
			Tuff 0.2' thick at 148.3 - 148.5

Corehole 78-7 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Turbated tuff 0.15' thick at 162.05 - 162.2'
			Gray lean oil shale from ~158.0 to 166.0' ~8' thick
			Tuff 0.2' thick at 167.9-168.1
			Gray lean oil shale ~173.0 - 179.1, 6.1' thick
			Gray lean oil shale 185.0-196.8, 11.8' thick
			Tuff 0.1' thick at 200.0
			Gray lean oil shale 205.8-229.5, 3.7' thick
			Tuff 0.1' thick at 224.7
226.5	256.8		Gray to dark brownish-gray lean oil shale with interbedded tuff. Thinly bedded
			with little turbation. Fractures and slickensides with and without breccias
			common
			Tuff 0.15' thick at 227.4-227.55
			Tuff 0.2' thick at 233.5 - 233.7
			Tuffaceous zone with thin tuffs interbedded with thin gray to brownish-gray
			oil shale 240.2 - 241.1', 0.9' thick
			Soluble salts 0.15' thick at 254.85 - 255.0

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
256.8	273.1		Abundant intermixed and layered tuff with oil shale
			259.4-262.3', 2.9' thick
			Tuff 0.2' thick at 259.4-259.6
			Gray oil shale with tuff
			Abundant interlayered tuff
			Tuff 0.1' thick at 269.5
			Tuff 0.5' thick at 270.4-270.9
273.1	304.0		Rich dark brown oil shale with some gray brown leaner oil shale.
			Thinly and evenly bedded with little turbation
			Tuff 0.1' thick at 285.0
			Tuff 0.1' thick at 287.8
			Tuff 0.1' thick at 291.6
			Tuff 0.1' thick at 295.4
			Tuff 0.15 thick at 298.3-298.45
			Tuff 0.15' thick at 299.2-299.35
			Tuff 0.1' thick at 301.6
			Comments: Post consolidation faults, slickensides, and brecciated zones very
			common. Fault planes often undulatory, but most between 30° and 60° from
			horizontal. Most slickensides have movement striations parallel to dip, rarely
			with lineations in other directions. Movement sense rarely discernable, but

Corehole 78-7 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			both normal and reverse motions were seen. The rock was difficult to core due to its being tough but soft. The rock is rich in clay, and has a greasy feel when wet.

OIL-SHALE ASSAYS BY MODIFIED FISCHER RETORT METHOD

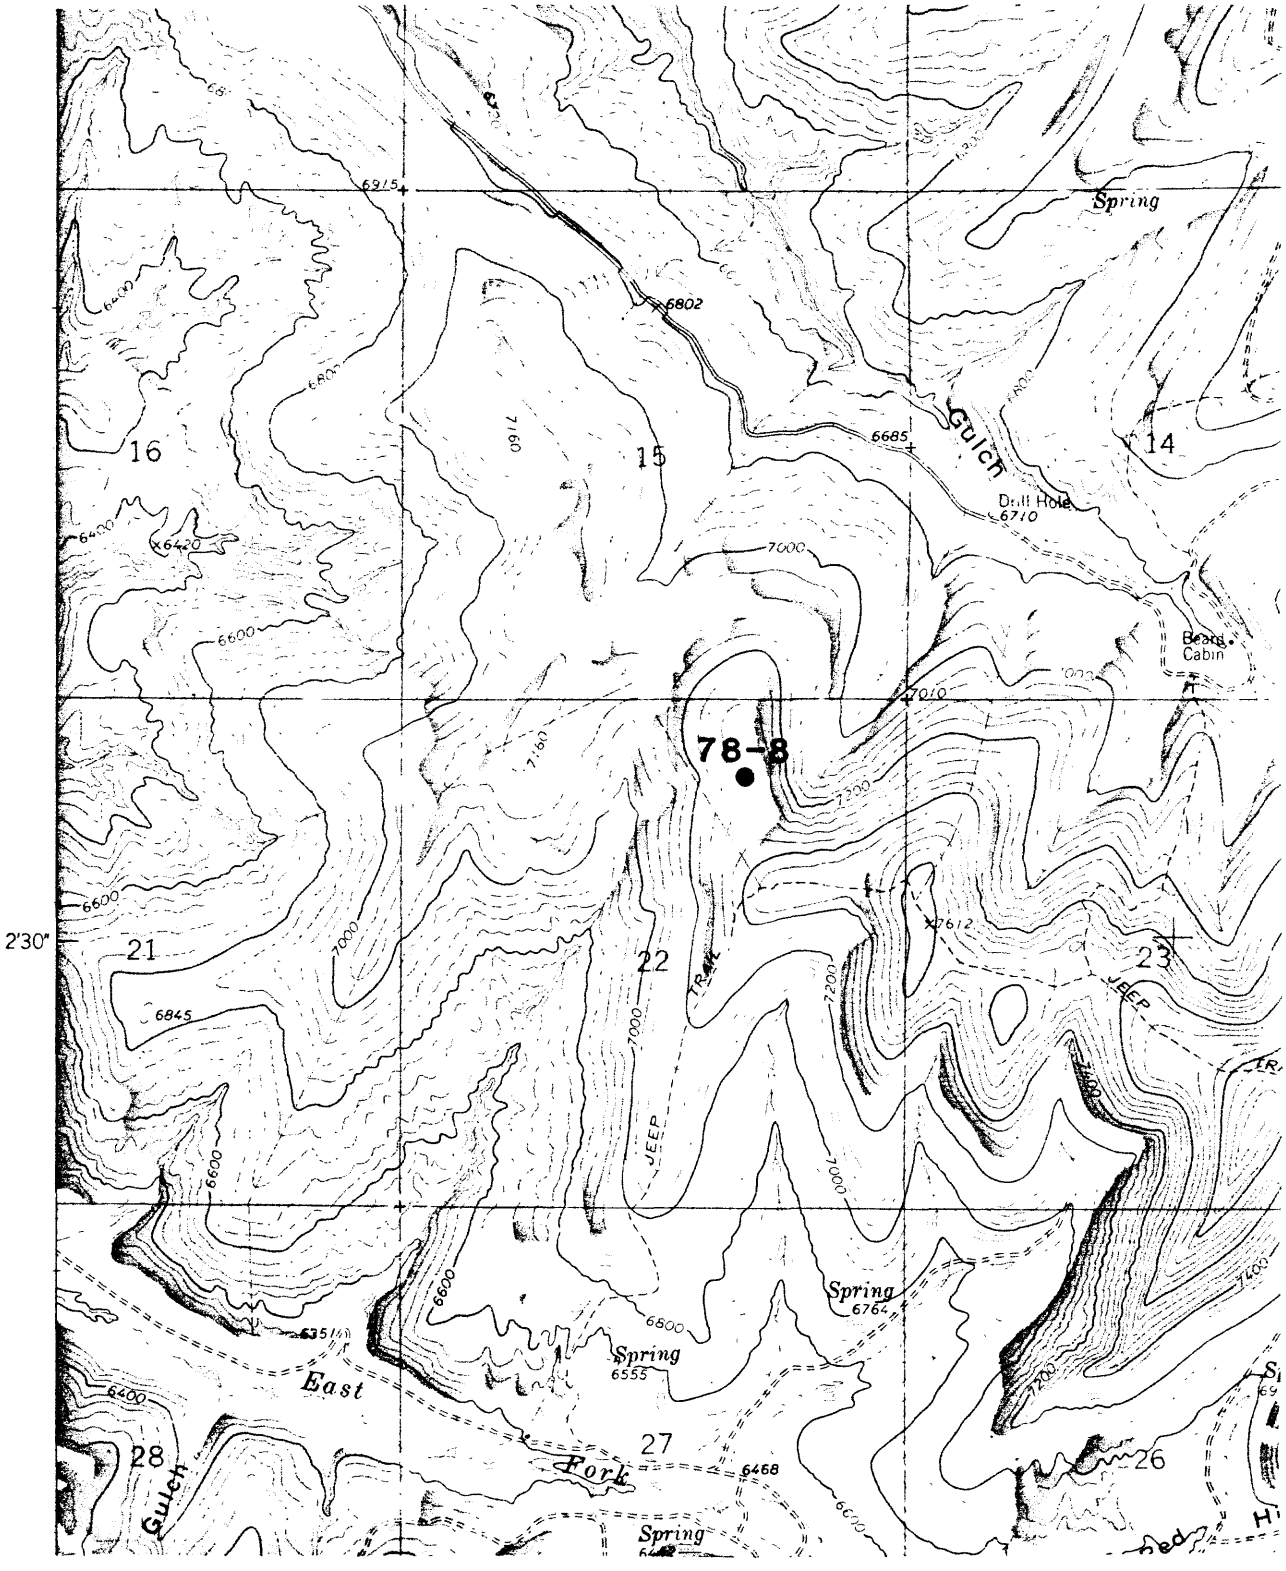

Figure 9.--Map showing location of core hole 78-8. Base from Calamity Ridge Quadrangle (1962). Scale 1:24,000.

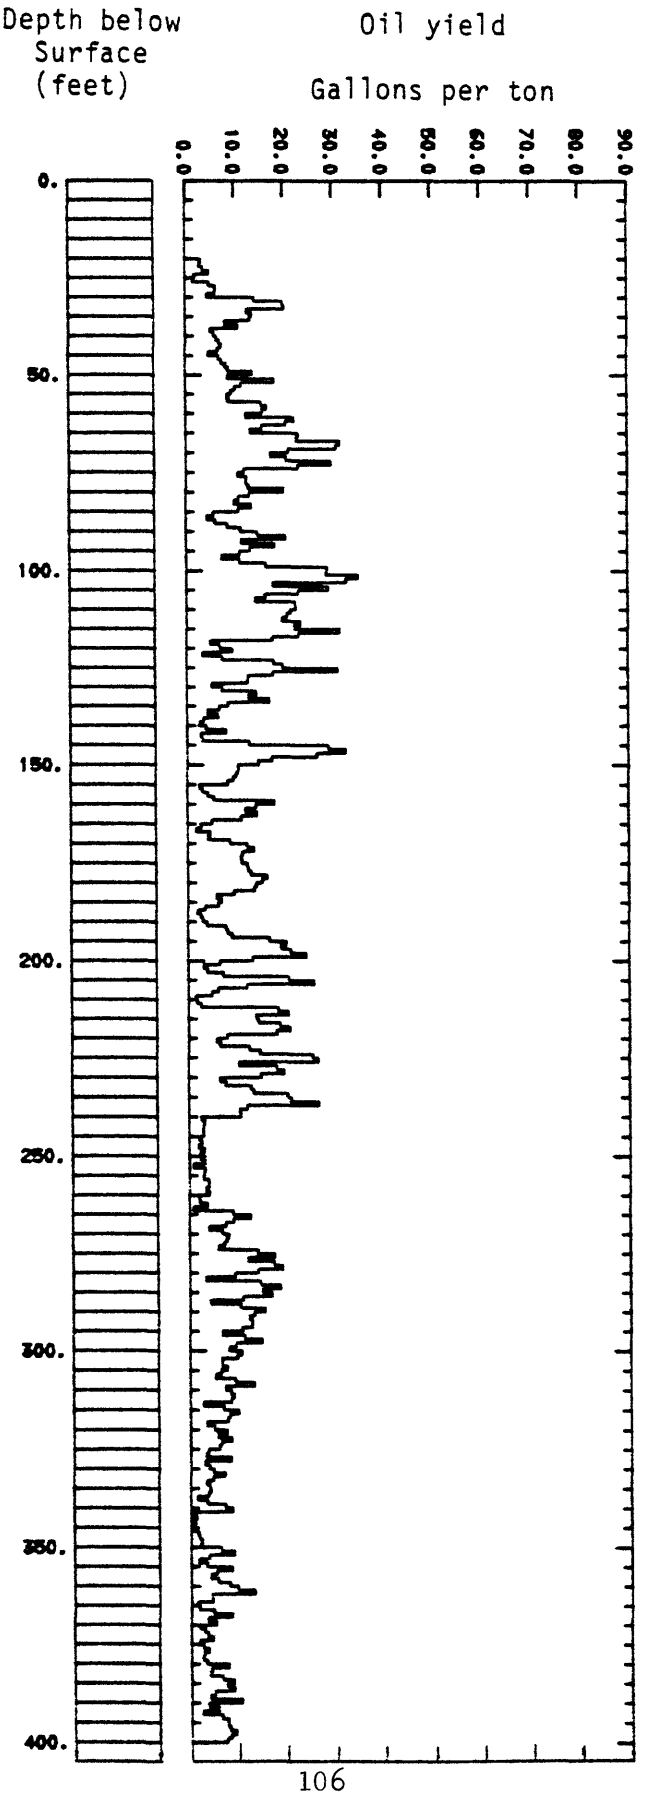
U.S. Geological Survey

Core hole 78-8



Corehole 78-8

Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
20.0'	38.0'		Dark gray to gray (rust where weathered) shale, smells faintly of oil with
			carbonaceous residue in fractures.
			Tuff 0.2' thick at 21.3'-21.5'
			Tuff 0.1' thick at 37.8'
38.0'	276.8'		Gray to dark-grayish brown shale, calcareous in parts. Smells faintly of oil
			Tuff thinly bedded with shale. 50.85'-51.3', 0.45' thick
			Tuff 0.1' thick at 59.3'
			Tuff 0.2' thick at 60.0'-60.2'
			Tuff 0.1' thick at 67.3'
			Tuff 0.15' thick at 70.0'-70.15'
			Tuff 0.4' thick at 92.1'-92.5' with minor shale
			Below ~70' parts which are dark brown in color smell distinctly of oil. This
			unit is highly broken up with some vertical fractures and many slickensides
			with brecciated zones. Fault striations occur both parallel and perpendicular
			to the dip, which can be from horizontal to vertical.

Corehole 78-8 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Tuff 0.1' thick at 104.8'
			Tuff 0.1' thick at 121.4'
			Tuff 0.3' thick at 132.2'-132.5' with minor shale
			Below ~135' the shale is getting soft and greasy in texture, indicating
			abundant clay.
			Tuff 0.1' thick at 165.3'
			Tuff 0.1' thick at 183.2'
			Tuff 0.2' thick at 186.2'-186.4'

Corehole 78-8 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Tuff 0.2' thick at 197.8-198.0' with oil staining
			Tuff 0.15' thick at 234.75'-234.9'
			Drilling was switched at 238.0' from 2½" (H) core to 1½" (NQ) core using a
			colloid based mud, with the 3½" drill pipe used as casing.
			Ostrocod fossils beginning at 259.7', rich beds
			>0.1' thick are listed
			Ostrocods 0.2' thick at 261.0'-261.2'
			Ostrocods 0.1' thick at 262.2'=262.3'
			Ostrocods 1.8' thick at 262.8'-264.6' (~50% shale)
			Ostrocods 0.5' thick at 265.0'-265.5'
			Ostrocods 0.5' thick at 266.0'-266.5'
			Tuff 0.1' thick at 273.4'

Corehole 78-8 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
276.8'	310.0'		Dark brown to tan rich oil shale, thinly bedded with little turbation and
			some tuff. Low in carbonate.
			Tuff 0.1' thick at 279.0'
			Tuff 0.15' thick at 279.1'-279.25'
			Tuff 0.1' thick at 279.5'
			Tuff 0.1' thick at 282.0'
			Tuff 0.2' thick at 284.6-284.9'
			Tuff 0.9' thick at 296.5'-287.4' with ~50% shale
			Tuff 0.1' thick at 300.4'
			At ~305' the hole started absorbing water at ~5 $ft^3 \cdot hr^{-1}$
			Tuff 0.55' thick at 300.5'-301.05'
			Tuff 0.4' thick at 302.0'-302.4'
			Tuff 0.15' thick at 302.6'-302.75'
			Tuff 0.15' thick at 303.0'-303.15'
			Limestone 0.1' thick at 309.3' Dirty
			Limestone 0.2' thick at 309.8'-310.0' Dirty
310.0'	413.3'		Gray to brownish-gray oil shale, moderately lean, thinly bedded with little
			turbation. Tuffs common with some grav clay layers. Low in carbonates, except
			in dirty limestone layers with and without ostrocods.
			Tuff 0.3' thick at 313.2'-313.5'
			Limestone 0.1' thick at 317.2' Dirty

Corehole 78-8 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION	
			Tuff 0.15' thick at 317.9-318.05'	
			Limestone 0.2' thick at 318.6'-318.8'	Dirty w/ostrocods
			Limestone 0.1' thick at 319.2'	Dirty
			Limestone 0.3' thick at 320.7'-321.0'	Dirty
			Limestone 0.1' thick at 321.4'	Dirty
			Limestone 0.2' thick at 321.9'-322.1'	Dirty
			Limestone 0.1' thick at 322.3'	Dirty
			Limestone 0.1' thick at 322.6'	Dirty w/ostrocods
			Limestone 0.1' thick at 322.8'	Dirty w/ostrocods
			Limestone 0.2' thick at 325.5'-325.7'	Dirty w/ostrocods
			Limestone 0.3' thick at 326.4'-326.7'	Dirty
			Limestone 0.1' thick at 327.3'	Dirty
			Limestone 0.1' thick at 328.3'	Dirty
			Limestone 0.1' thick at 330.0'	Dirty
			Limestone 0.1' thick at 331.4'	Dirty
			Limestone 0.4' thick at 336.7'-337.1'	Dirty
			Limestone 0.3' thick at 337.9-338.2'	Dirty w/ostrocods with limestone pebbles
			Limestone 0.15' thick at 340.05'-340.2'	Dirty
			Limestone 0.1' thick at 341.0'	Dirty w/ostrocods
			Limestone 0.2' thick at 342.5'-342.7'	Dirty w/ostrocods
		Water Saturated	Limestone 7.6' thick at 343.0'-350.6'	Dirty w/ostrocods
			Limestone 0.3' thick at 351.5'-351.8'	Dirty

Corehole 78-8 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION	
			Limestone 0.2' thick at 352.7'-352.9'	Dirty
			Limestone 0.3' thick at 353.7-354.0'	Dirty
			Limestone 0.1' thick at 355.8'-355.9'	Dirty
			Limestone 0.15' thick at 356.15-'356.3'	Dirty
			Limestone 0.35' thick at 356.6'-356.95'	Dirty
			Limestone 0.2' thick at 360.2'-360.4'	Dirty
			Limestone 0.2' thick at 361.7'-361.9'	Dirty
			Limestone 0.2' thick at 362.0'-362.2'	Dirty
Due to sinking of 3½" casing, a 1' length was added to top when coring was at 352'.			Limestone 0.1' thick at 362.5'	Dirty
			Limestone 0.4' thick at 364.0'-364.4'	Dirty
			Limestone 0.3' thick at 368.0'-368.3'	Dirty w/ostrocods
			Limestone 0.15' thick at 371.05'-371.2'	Dirty
			Limestone 0.15' thick at 372.45'-372.6'	Dirty
At 372' the 1' add on section of casing was removed and a 5' section added on and drilled to 241'.			Limestone 0.3' thick at 374.5'-374.8'	Dirty
			Limestone 0.2' thick at 381.0'-381.2'	Dirty
			Limestone 0.1' thick at 383.8'	Dirty
			Limestone 0.6' thick at 388.0'-388.6'	Dirty
			Limestone 0.2' thick at 390.1'-390.3'	Dirty
			Limestone 0.6' thick at 392.1-392.7'	Dirty w/ostrocods
			Limestone 0.6' thick at 399.8'-400.4-	Dirty w/ostrocods

Corehole 78-8 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Limestone 0.1' thick at 403.2' with ostrocods
			Limestone 0.2' thick at 403.3'-403.5' with ostrocods
			Limestone 0.2' thick at 403.9'-404.1' with ostrocods
			Limestone 0.15' whick at 404.2'-404.35' with ostrocods
			Limestone 0.2' thick at 405.7'-405.9' with ostrocods
			Limestone 0.15' thick at 410.0'-410.15' with ostrocods
			Limestone 0.6' thick at 410.7'-411.3' Dirty
413.3'	434.6'		Brown to gray lean oil shale with and without carbonate parts have intermixed
			ostrocods and larger fossils of snails and bivalves. Splits with larger fossils
			marked by black "X" on core. Massive limestone >0.1' thick noted. Silty in
			lower 5'.
Due to sinking of casing a 1' length was added to top, total casing depth ~242'			Limestone 0.3' thick at 415.3'-415.6'
			Limestone 0.2' thick at 417.4'-417.6'
			Diamond bit changed at 432.1'
434.6'	452.9'		Fine white to gray calcite cemented quartz sandstone, mixed with shale in places,
			also interbedded. Shaley segments are calcitic, with ostrocods and carbonized
			plant remains. Larger fossils common in parts.

Corehole 78-8 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
452.9'	454.6'		Massive shale (claystone), dark gray and relatively soft and brittle largely without carbonate with many slickensides. May be fault gouge.
454.6'	458.1'		Gray to dark-gray calcitic shale
458.1'	466.1'		Light-gray silty clayey limestone or calcite rich dirty siltstone. Fossils uncommon.
466.1'	467.7'		Gray to brown and black calcitic shale, thinly bedded with siderite (?) nodules. No oil smell.
467.7'	475.1'		Medium-grained gray to white well-sorted moderately well-rounded quartz sandstone. Massive with calcite and silica cement, soft in upper 1' where leached Some parts water saturated. Less well sorted in lower 2'. By 470' water loss rate down the drill hole had increased to about 15 $ft.^{3}$ $hr.^{-1}$.
475.1'	491.3'		Calcite-rich claystone, clayey siltstone, and fine-grained poorly sorted sandstone, light gray to gray, interbedded with poorly defined horizons on a scale of about 1'. Fossils or calcitic nodules common. Lowest 0.5' is very dark brown non-calcitic shale.

Corehole 78-8 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
491.4'	495.8		Sandstone, medium to very coarse grained, poorly sorted with high angle bedding
			dips, possibly cross bedding. Tan to light gray with calcite and silicia cement.
			Parts are water saturated. Lowermost 2' mixed and bedded with shale and
			carbonaceous material.
495.8'	505.1'		Shale gray to dark brown, silty and largely calcitic. Siderite nodule at 496.9'.
			Fossiliferous units with bivalve shells at 497.2'-497.4', 0.2' thick.
			499.3'-500.6', 1.3' thick
505.1'	507.4'		Sandstone, medium grained light gray, massive, well sorted with calcite cement.
507.4'	557.9'		Light-gray calcareous claystone with sandy units interbedded on a scale of about
			a foot. Fossils common. Dark-brown to gray and light-gray calcitic shale and
			claystone from 525.9' to 533.6', 7.7' thick.
			Sandstone unit, white to light gray, interbedded with minor shale, fine
			grained with calcite cement. 535.0'-542.5', 7.5' thick.
			At 558.3', the 3" casing was advanced to 248' and additional pipe added on top
			to remedy casing sinking beyond seals.

Corehole 78-8 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
557.9'	575.4'		Gray shale, calcitic, medium to thinly bedded with some turbation. Snails and bivalve fossils common, ostrocods intermixed and abundant.
575.4'	605.5'		Calcitic gray to light-gray claystone, shale, siltstone, and poorly sorted sandstone interbedded and mixed. Fossiliferous with ostrocods and larger fossils.
			After a four-day break, water remained in the hole to a depth of about 120', from an original depth of about 40'.
			At ~450' depth the hole had caved in and had to be reamed upon reinsertion of the drill pipe to the hole bottom at 602.1'.
			Light-gray to white fine-grained moderately-sorted calcite cemented sandstone interbedded with calcitic clayey siltstone or mudstone.
			At 602.1'-604.0', 1.9' thick.
			by ~615' water loss rate down the drill hole has increased to ~20 $ft.^3 hr.^{-1}$.
			Fine-grained poorly sorted sandstone, gray with calcite cement, from 604.95'-605.5', 0.55' thick.

Corehole 78-8 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
605.5'	630.0'		Gray to dark-gray calcitic shale, several zones
			gray to black and smell faintly of oil. Thinly bedded with little turbation,
			ostrocods and other fossils common particularly below 611.7'.
			Due to the 3½" casing sinking below its seals, it was advanced to 251' and a 5'
			section added on top.
			Noncalcareous gray claystone at 617.4'-617.9', 0.5' thick.

1/ "a"--indicates specific gravity estimated as 0.92.

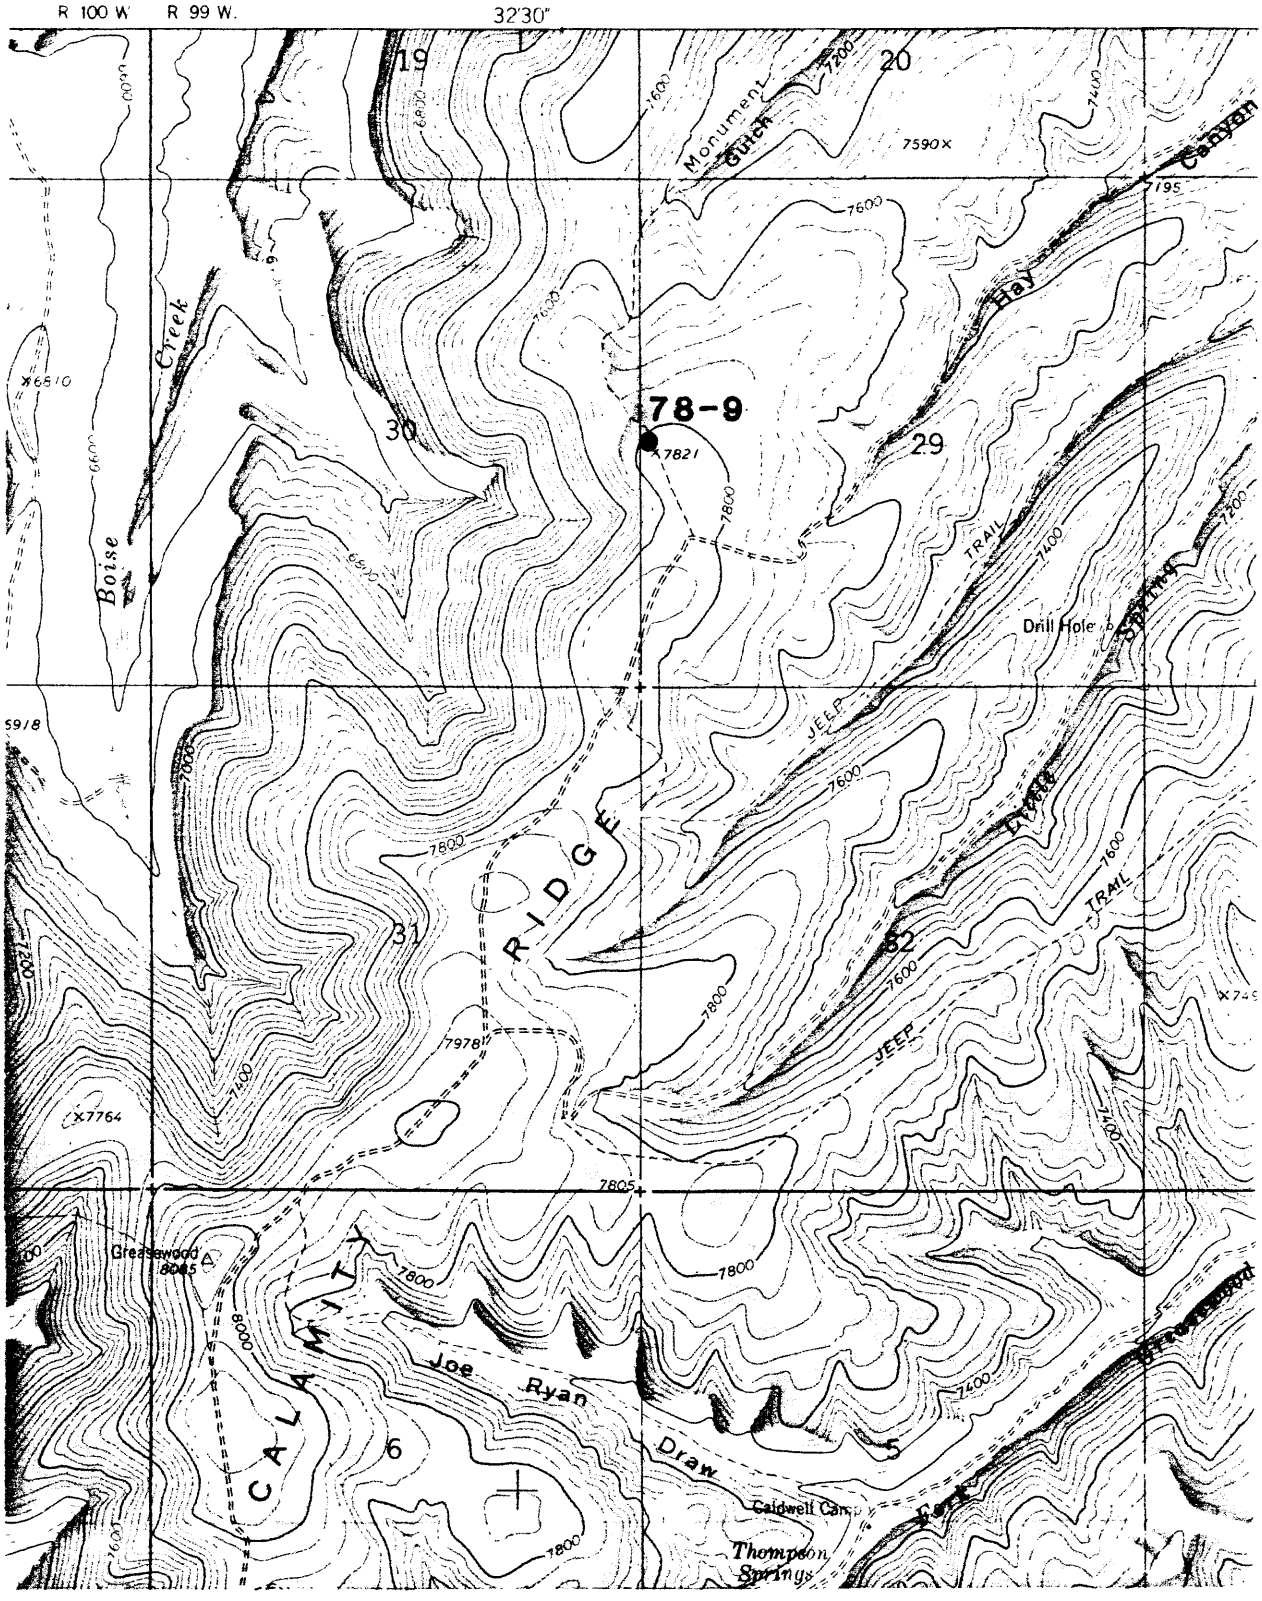

Figure 10.--Map showing location of core hole 78-9. Base from Calamity Ridge Quadrangle (1962). Scale 1:24,000.

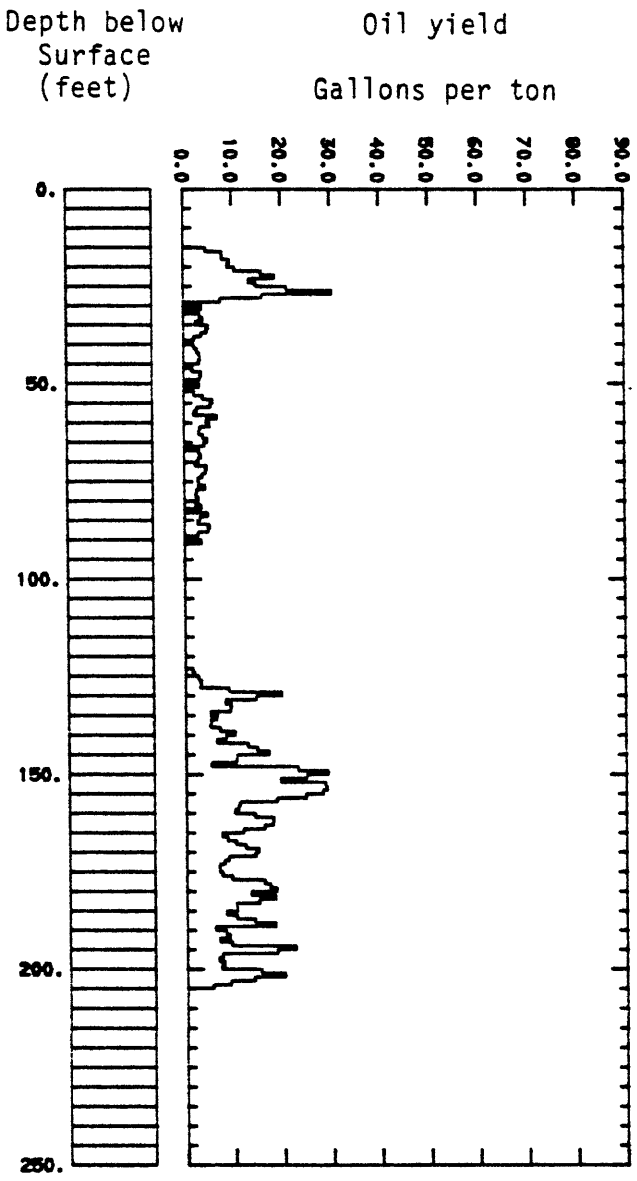
U.S. Geological Survey

Core hole 78-9



Corehole 78-9

Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
15.0	91.9		Oil shale interbedded with tuff, bleached and weathered.
			Some parts relatively unweathered and are very dark
			Brown rich oil shale thinly bedded with little turbation. Moderately rich
			to gray brown oil shale below ~50'
			Tuff 0.1' thick at 28.7'
			Tuff 0.15' thick at 32.7-32.85
			Tuff 0.1' thick at 36.8
			Tuffaceous zone ~48.5 to 49.5
			Tuff 0.7' thick at 49.5 to 50.2
			Tuff 0.4' thick at 52.6 to 53.0
			Tuff 0.1 thick at 53.9
			Tuff 0.2 thick at 56.6
			Tuff 0.5' thick at 58.1 to 58.6
			Tuff 0.2 thick at 65.7' - 65.9'
			Oxidized leached zone with numerous open pits
			0.3' thick at 65.9' - 66.2
			Tuff 0.1 thick at 67.6' with minor shale
			Tuff 0.1' thick at 86.2
			Tuff 0.3' thick at 90.8'-91.1'

Corehole 78-9 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
91.9	121.7		Tuffaceous zone, numerous thick and thin tuffs turbated and interlayered with some dark brown oil shale. Tuffs are gray to dark gray. ~80 percent tuff
121.7	128.9		Brown to tan lean oil shale thinly interbedded and in parts turbated with thin tuffs. ~50 percent tuff At 127.15', 0.5' tuff with abundant solution cavities
128.9	134.4		Dark gray brown to black oil shale thinly interbedded with thin tuffs
134.4	141.5		Brown to tan lean oil shale with abundant thinly interbedded tan tuff.
141.5	204.9		Similar to interval 128.9 - 134.4' Tuff 0.15' thick at 143.6 - 142.75' Tan to brown oil shale with tuff 145.9' -147.0 Tan to brown oil shale with tuff 158.3 - 160.6' Tuff 0.1' thick at 164.4' Tan to dark brown oil shale with tan thinly interbedded tuff. 166.0-169.4 and 171.5 - 177.9'

Corehole 78-9 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Brown to dark gray brown oil shale interbedded with tan tuff.
			182.5 - 187.5'
			and 188.9 - 204.9

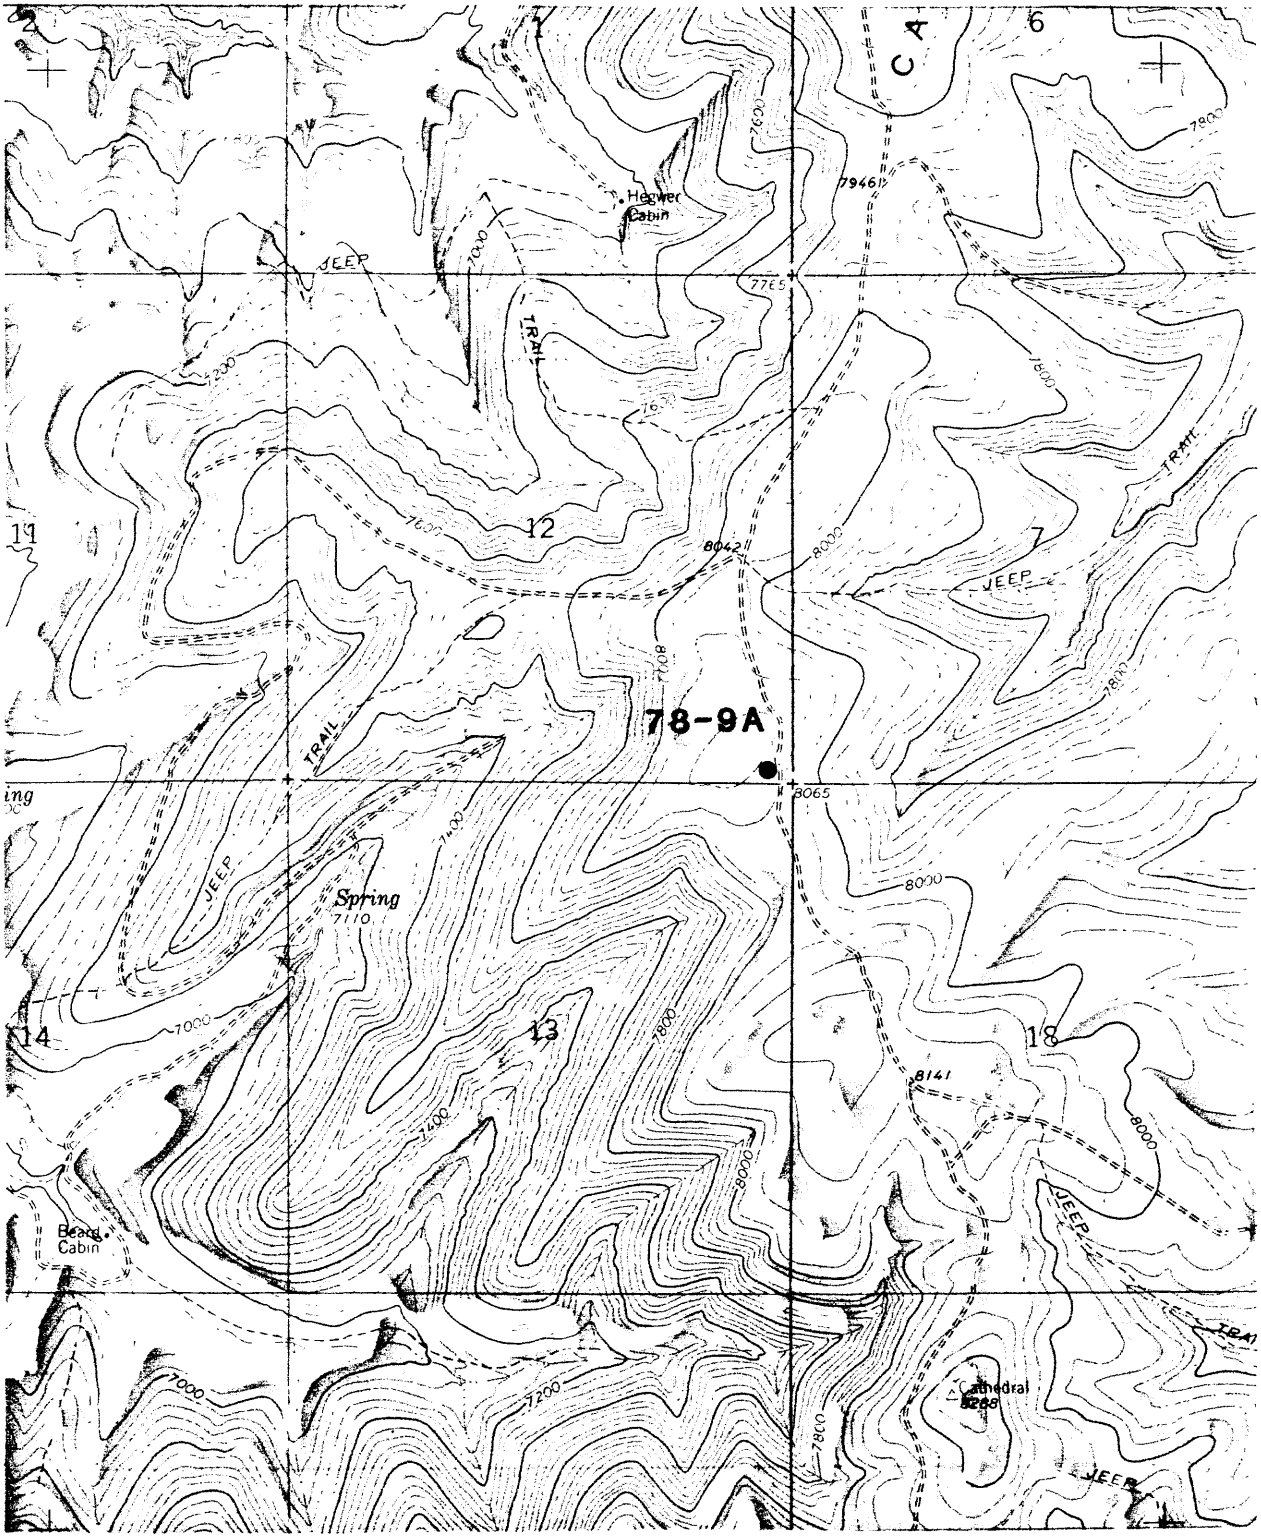

Figure 11.--Map showing location of core hole 78-9A. Base from Calamity Ridge Quadrangle (1962). Scale 1:24,000.

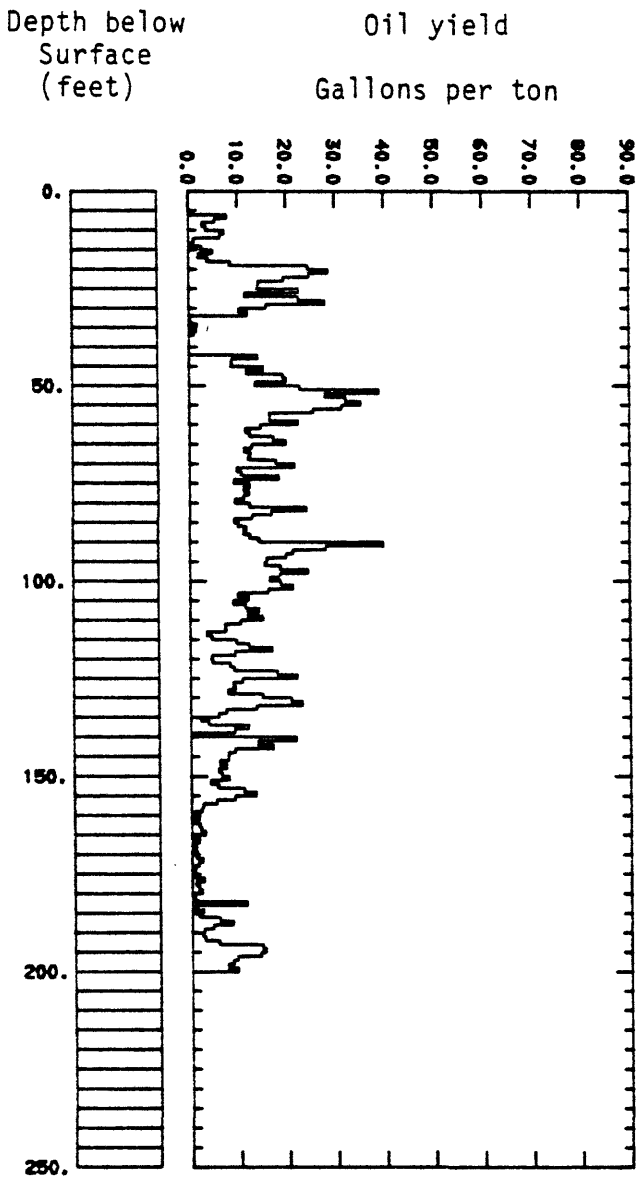
U.S. Geological Survey

Core hole 78-9A



Corehole 78-9A

Logged by Steven Ihnen

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
6'	12.6'	6.6	Poorly consolidated low-grade OS. Some turbation weathered.
12.6'	16.6'	4	Heavily oxidized zone with many fractures
16.6'	18.5'	1.9	Very light colored poor-grade OS with some tuffaceous areas.
			Moderately turbated.
18.5'	21.0'	3.5	Moderately to very dark OS with platey fractures and horizontal bedding
21.0'	27.0'	6	Very light, medium to poor grade OS sparsely interbedded with tuffs.
27.0'	29.6'	2.6	Medium brown mildy turbated medium grade OS.
29.6'	31.0'	1.4	Oxidation zone.
31.0'	32.0'	1	Similar to 21'-27' above.
32.0'	33.5'	1.5	Oxidation zone.

Corehole 78-9A (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
33.5'	37.0'	3.5	Medium brown, poor to fair grade OS turbated tuff at 35.2' (0.3' thick)
37.0'	43.0'	6	Oxidized shale
43.0'	47.4'	4.4	Light, poor to medium grade OS
47.4'	61.0'	24.6	Mixed light to medium, fair to poor-grade OS
			tuff at 52.6'.
61.0'	61.5	1.2	Oxidation/tuff zone
61.5'	65.0'	3.5	Dark fairly rich OS
65.0'	81.0'	16	Light poor grade OS
81'	82.5'	1.5	Tuffaceous zone ~>50% tuffs in beds
82.5'	88'	5.5	Same as 65-81 above
88'	93'	5	Somewhat darker, finely bedded poor-grade shale
93'	120'	27	Mixed light to medium brown, poor to fair grade shales thinly interbedded
			with tuffs. Some occurrence of salt.

Corehole 78-9A (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
120'	120.4'	.4	Tuff zone.
120.4'	131.4'	11	Same as 82.5-88 above.
131.4'	133.0'	2.6	Darker, vertically fractured material.
133.0'	138.5'	5.5	Very light poor OS.
138.5'	140.4'	1.9	Major tuff zone oxidation in fracture.
140.4'	142.0'	1.6	Darker mixed OS.
142.0'	161.6'	19.6	Very light very poor grade OS.
161.6'	161.9'	0.3	Very dark banded segment.
161.9'	164.5'	2.6	Similar to 142-161 above.
164.5'	167.5'	3.0	Siltstone?
167.5'	193.6'		Similar to 142-161 above interspersed w/higher grade OS in small bands. Fairly tuffaceous below ~187.

Corehole 78-9A (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
193.6'	196.0'	2.4	Dark-brown fairly rich OS heavily fractured.
196.0'	200.0		Light-brown low-grade OS.

1/ "a"--indicates specific gravity estimated as 0.92.

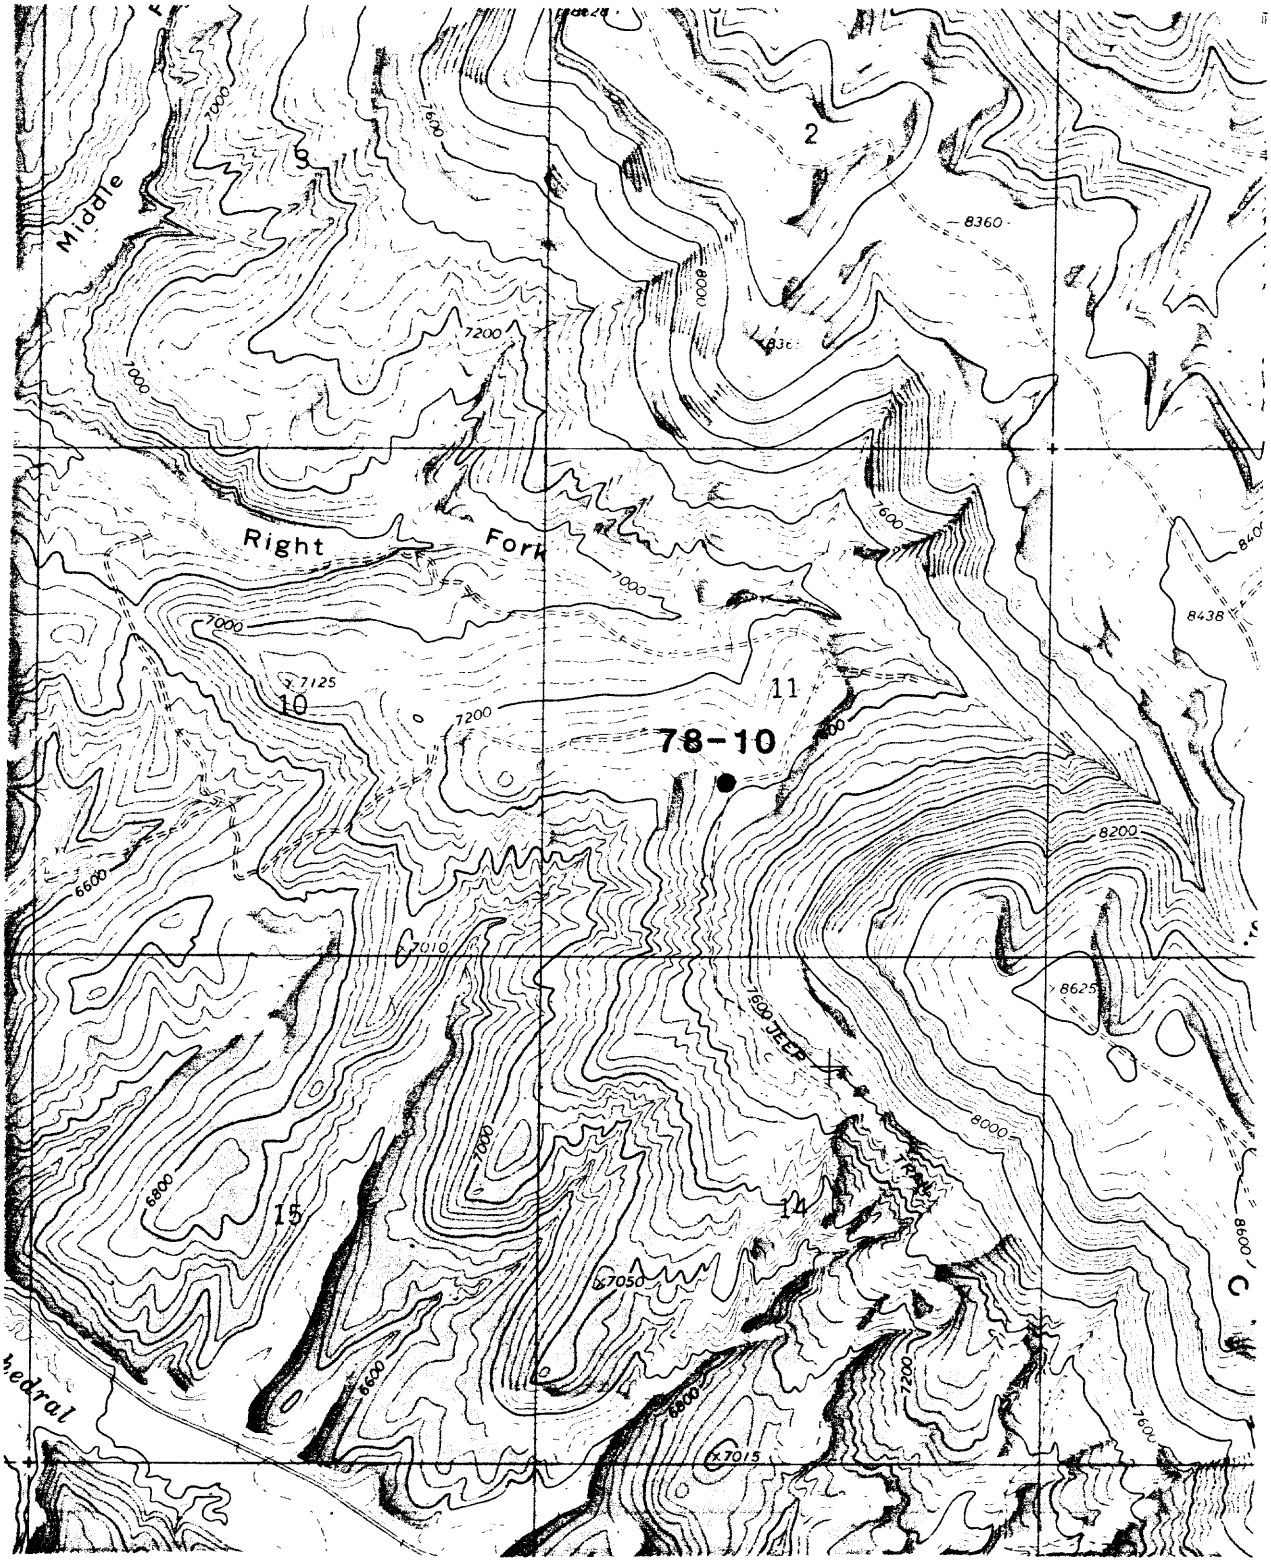

Figure 12.--Map showing location of core hole 78-10. Base from Black Cabin Gulch Quadrangle (1964). Scale 1:24,000.

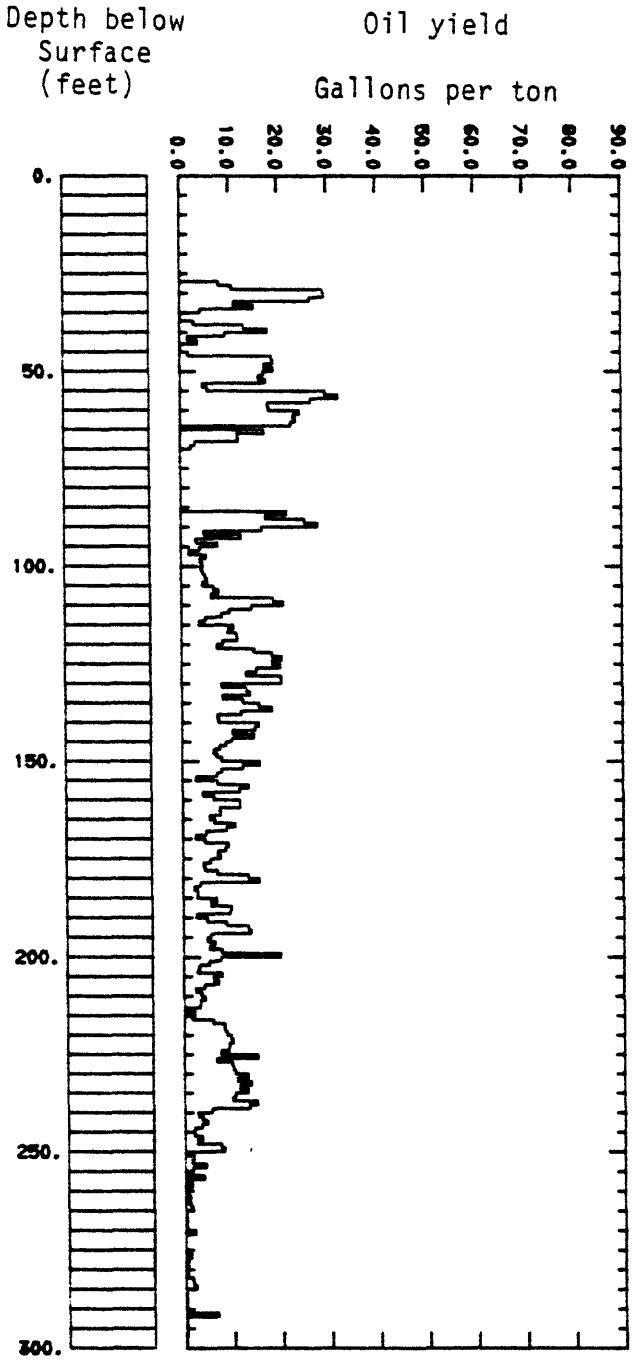
U.S. Geological Survey

Core hole 78-10



Corehole 78-10

Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
20.0'	27.3'		Loose slope debris, discarded
27.3'	34.9'		Dark-brown shale smelling faintly of oil, thinly bedded with little turbation
			with bedding dipping at 5^{o}-20^{o}.
			Sightly calcitic.
			Tuff 0.1' thick at 27.6'
			String pulled and casing reamed and extended to solid rock at 27.3'.
			Tuff 0.1' thick at 32.0'
			Tuff 0.2' thick at 34.2'-34.4'
34.9'	104.4'		Brown to gray shale smelling faintly of oil interbedded with calcitic
			claystone and mudstone. The clay rich lean oil shale is thinly bedded with
			little turbation, and the calcitic claystone and mudstone is gray with
			indistinct bedding. Gilsonite nodules common in shale.
			Claystone 34.9'-38.3', 3.4' thick
			Mudstone 42.6'-45.5', 2.9' thick with shale chips
			Tuff (Dolomite?) 0.7' thick at 54.0'-54.7' with minor shale
			Tuff 0.1' thick at 57.6'

Corehole 78-10 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Dolomite 0.2' thick at 62.2'-62.4', with shale and ostrocods. Mudstone with
			minor shale and abundant shale chips from 68.2'-85.0-, 17.8' thick. Gray and
			calcitic, poorly bedded with some thinly bedded to highly turbated shale.
			Tuff 0.2' thick at 83.2'-83.4'
			Tuff 0.1' thick at 85.0'
			Moderately rich oil shale 85.1'-91.3', 6.2' thick
			Claystone, 92.3'-97.0', 4.7' thick, thinly bedded
104.4'	121.2'		Brown to gray lean oil shale thinly and horizontally bedded, calcareous.
			Abundant scattered and bedded ostrocods.
			Ostrocod limestone 0.3' thick at 108.2'-108.5'
			Ostrocod limestone 1.0' thick at 109.2'-110.2' oil saturated.
			Ostrocod limestone 0.6' thick at 110.9'-111.5'
			Ostrocod limestone 0.1' thick at 115.3'
			Brittle, Massive limestone 0.2' thick at 121.0'-121.2'
121.2'	257.3'		Dark brown to gray moderately lean to lean oil shale, thinly bedded with
			little turbation. Mainly noncalcareous with some light-colored calcitic
			zones with and without stromatolites.

Corehole 78-10 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Calcitic light colored shale 128.4'-129.3', 0.9' thick
			Calcitic light colored shale 132.8'-133.5', 0.7' thick
			Bivalve fossils or mud flakes 0.1' thick at 135.5'
			Tuff 0.1' thick at 140.4'
			Tuff 0.1' thick at 145.3'
			Ostrocods dolomite 0.2' thick at 150.9'-151.1'
			Ostrocods dolomite 0.5' thick at 153.5'-154.0'
			Tuffaceous zone 1.7' thick at 157.6'-159.3' ~50% shale
			Tuff 0.2' thick at 160.4'-160.6'
			Tuff 0.1' thick at 161.3'
			Tuff 0.1' thick at 161.8'
			Ostrocod limestone 0.3' thick at 162.3'-162.6'
			Ostrocod limestone 0.1' thick at 163.9'
			Ostrocod limestone 0.1' thick at 164.7'
			Tuff 0.1' thick at 168.0'
			Limestone 0.1' thick at 170.8' Stromatolites?
			Limestone 0.1' thick at ~171.7'
			Dolomite 0.4' thick at 175.05'-175.45'
			Ostrocod limestone 0.3' thick at 176.7'-177.0' turbated
			Ostrocod limestone 0.3' thick at 180.7'-181.0' oil stained
			Dolomite 0.2' thick at 187.8'-188.0' with minor shale
			Limestone 0.1' thick at 188.5' stromatolites?
			Limestone 0.2' thick at 189.3'-189.5'
			Ostrocod limestone 0.2' thick at 194.0'-194.2'

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Limestone 0.2' thick at 194.4'-194.6'
			Dolomite 0.1' thick at 198.9'
			Dolomite 0.1' thick at 200.1'
			Dolomite 0.2' thick at 200.8'-201.0'
			Dolomite 0.1' thick at 202.6'
			Limestone 0.6' thick at 203.2'-203.8' with minor shale
			Ostrocod limestone 0.1' thick at 210.7'
			Ostrocod limestone 0.3' thick at 212.3'-212.6'
			Ostrocod limestone 0.2' thick at 215.4'-215.6'
			Dark brown moderately lean oil shale 216.2'- thick, with abundant
			lighter colored beds and stromatolites.
			Dolomite 0.1' thick at 217.9' stromatolites
			Dolomite 0.1' thick at 224.7'
			Dolomite 0.3' thick at 224.8'-225.1' stromatolites
			Dolomite 0.4' thick at 226.7'-227.1' ostrocods
			Dolomite 0.5' thick at 228.5'-229.0' ostrocods with minor shale
			Limestone 0.1' thick at 223.6' oil stains, ostrocods
			Limestone 0.2' thick at 223.8'-224.0' oil stained, ostrocods
257.3'	271.0'		Gray to brown poorly bedded calcareous claystone with abundant bivalve fossils.

Corehole 78-10 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
271.0'	297.5'		Mudstone, siltstone, and dirty poorly sorted sandstone, gray and largely
Bottom	of hole		calcitic, interbedded on a scale of about 2'.
			Limestone, dolomite, lean oil shale, and tuff were often calcitic and
			texturally quite similar and may be somewhat confused in this log.
			Slickensides commonly ranged from horizontal to 60^{o} and were rarely curved.
			Striations were usually parallel to the dip and rarely parallel to strike.

OIL-SHALE ASSAYS BY MODIFIED FISCHER RETORT METHOD

Samples from the U.S. Geological Survey's Corehole 78-10 drilled in sec. 11, T. 3 S., R. 100 W., Rio Blanco County, Colorado

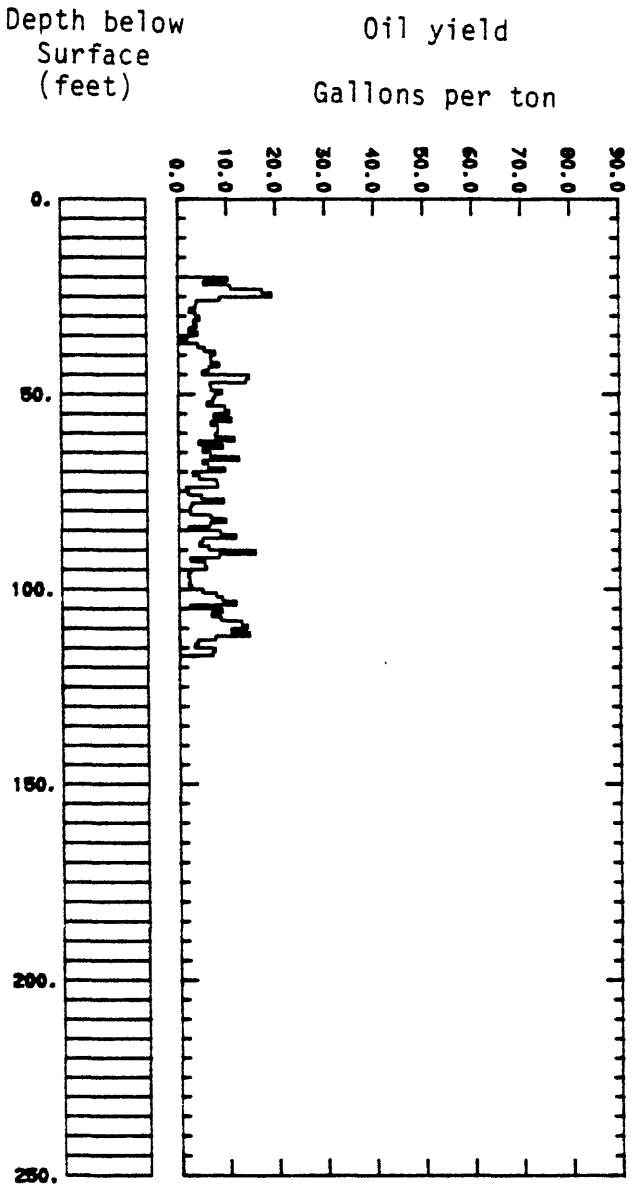
U.S. Geological Survey

Core hole 78-11



Corehole 78-11

Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
20.0'	35.9'		Dark-brown to gray very lean oil shale, abundant clay, shrinks and cracks on
			drying. Thinly bedded with some turbation. Slightly calcareous. Rare ostrocods.
			Tuff 0.2' thick at 20.8'-21.0'
			Tuff 0.3' thick at 25.3'-25.6' with interbedded shale
			Tuff 0.2' thick at 28.2'-28.4'
			Tuff 0.1' thick at 33.3'
35.9'	45.1'		Gray to dark brown lean to moderately rich oil shale with abundant ostrocods in
			descrete beds and intermixed, generally thinly bedded with little turbation.
			Very calcareous.
			Ostrocod limestone 1.0' thick at 36.2'-37.2' minor shale
			Ostrocod limestone 0.2' thick at 37.4'-37.6'
45.1'	101.5'		Gray to dark brown lean to moderately rich oil shale with some ostrocods with
			impure or dolomitic limestone beds, thinly bedded with little turbation.
			Slickensides common. Generally calcareous. Stromatolites and conglomeritic
			textures common in dolomites.
			Dolomite (?) 0.4' thick at 46.1'-46.5' with minor shale ostrocods
			Dolomite (?) 0.2' thick at 46.8'-47.0' with minor shale ostrocods

Corehole 78-11 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Dolomite, conglomeritic 0.4' thick at 47.7'-48/1' tuffaceous?
			Dolomite, conglomeritic 0.4' thick at 49.9'-50.3' tuffaceous?
			Dolomite, 0.1' thick at 53.7'
			Dolomite, 0.2' thick at 59.1'-54.3'
			Dolomite, 0.1' thick at 56.5'
			Dolomite, ostrocods 0.9' thick at 57.0'-57.9' tuffaceous?
			Dolomite, ostrocods 0.2' thick at 61.4'-61.6' tuffaceous
			Dolomite, 0.1' thick at 62.4'
			Tuff 0.1' thick at 62.9'
			Tuff 0.1' thick at 63.6'
			Dolomite 0.1' thick at 64.3'
			Dolomite 0.2' thick at 64.6'-64.8'
			Dolomite, ostrocods 0.2' thick at 65.0'-65.2'
			Dolomite 0.1' thick at 66.6'
			Dolomite, ostrocods 0.3' thick at 66.7'-67.0' with minor shale
			Dolomite, ostrocods 0.3' thick at 67.2'-67.5' with minor shale
			Limestone, ostrocods 0.2' thick at 67.9'-68.1' with minor shale
			Dolomite 0.15' thick at 69.55'-69.70' with minor shale
			Dolomite 0.1' thick at 70.2' with minor shale
			Dolomite, ostrocods 0.3' thick at 70.8'-71.1' with minor shale
			Dolomite, ostrocods 0.2' thick at 71.8'-72.0'
			Dolomite, 0.3' thick at 74.0'-74.3' with minor shale
			Dolomite, ostrocods 0.1' thick at 75.2' with minor shale
			Dolomite, ostrocods 0.3' thick at 78.1'-78.4'

Corehole 78-11 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Dolomite 0.3' thick at 82.5'-82.8'
			Dolomite oolites (pisoliths?) and ostrocods with calcite
			cement 0.4' thick at 86.3'-86.7'
			Dolomite 0.2' thick at 90.9'-91.1'
			Dolomite 0.2' thick at 91.2'-91.4' with minor shale
			Dolomite 0.1' thick at 94.0'
			Dolomite w/Stromatolites 0.3' thick at 97.0'-97.3' with minor shale
			Dolomite 0.15' thick at 97.5'-97.65' with minor shale
			Dolomite w/Stromatolites (?) 0.4' thick at 100.6'-101.0' with minor shale
			Dolomite w/Stromatolites 0.1' thick at 101.2' with minor shale
101.5'	117.4'		Similar to preceeding interval 45.1' to 101.5', but oil shale is dark gray and
			brown to nearly black and rich. Smells of H_2S as well as oil. Calcareous.
			Dolomite, stromatolites 0.4' thick at 101.7'-101.1' with minor shale
			Dolomite, stromatolites 0.1' thick at 103.6' with minor shale
			Dolomite, stromatolites 0.4' thick at 104.0'-104.4' auto conglomerate
			Dolomite, stromatolites (?) 0.1' thick at 104.8' auto conglomerate
			Dolomite 0.2' thick at 107.0'-107.2'
			Dolomite 0.2' thick at 109.7'-109.9'

Corehole 78-11 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
117.4'	153.0'		Gray calcareous claystone, mudstone, and dirty sandstone irregularly inter-
			bedded to massive. Some of the mudstones are fossiliferous and parts of the
			sandstones show crossbedding and brown oil staining.
153.0'	193.3'		Sandstone, moderately well sorted with calcite cement, medium grain size with
			thick indistinct bedding. Largely water saturated with dark brown oil staining.
			Thickly interbedded with calcareous claystone and mudstone some beds are oozing
			a brown thick oil
			Below about 170' the drilling water has been producing droplets of brown oil
			and smells strongly of oil
			Sandstone, largely oil saturated 9.4' thick at 153.0'-162.4'
			Sandstone, largely oil saturated 2.2' thick at 169.8'-172.0'
			Sandstone, largely oil saturated 17.5' thick at 173.3'-190.8'
193.3'	201.6'		Thinly bedded to massive gray mudstone and claystone with minor sand.
bottom	of hole		Calcareous with a fossiliferous unit at 201.1'-201.4', 0.3' thick.
			Bottom of Hole

Corehole 78-11 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			The dolomites were distinguished on the basis of texture and reaction to
			dilute HCl in comparison to pure calcite. Such beds occurred in shales which
			were both calcitic and noncalcitic. The texture of some tuffs or lean marlstones
			may well be the same as some dolomite and may be confused. Slickenside attitudes
			varied widely but were mainly between about 10^{o} and 50^{o} from the horizontal
			with striations oriented down dip.

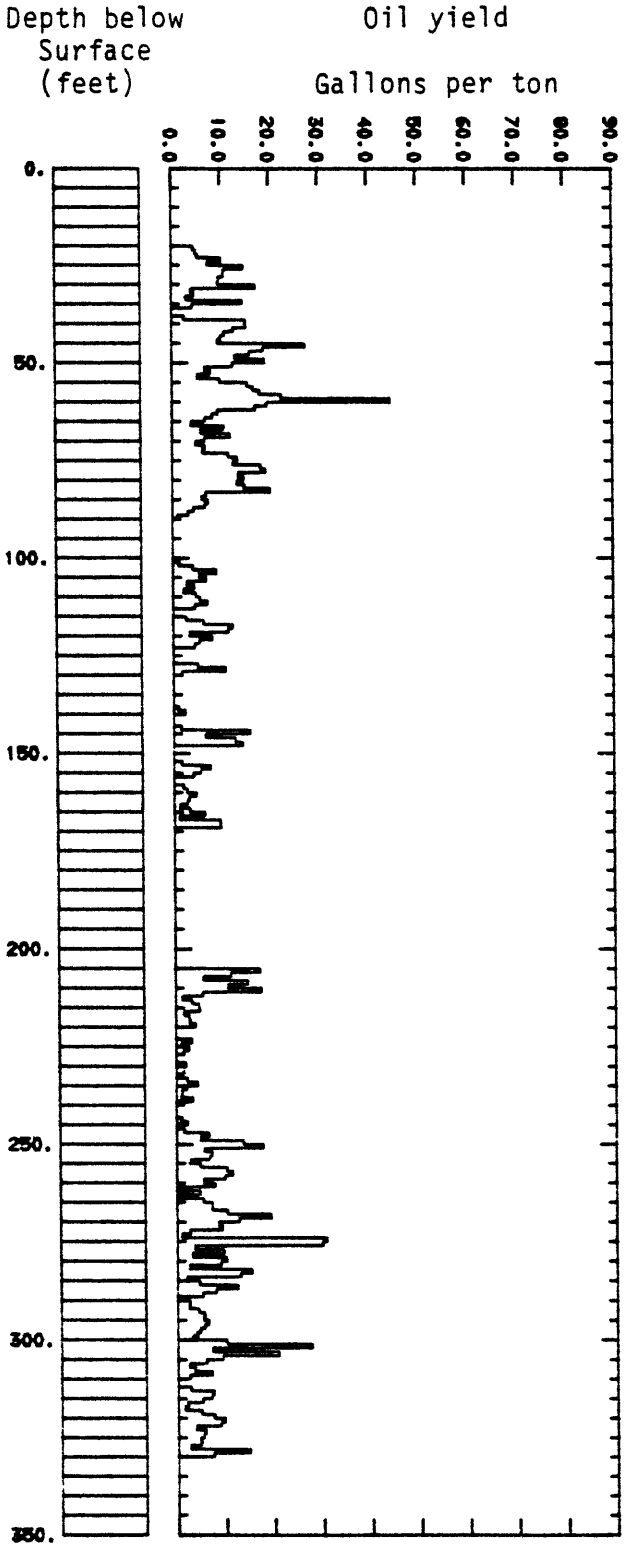
Core hole 78-12



Corehole 78-12

Logged by Kurt Hollocher

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
20'	111.8'		Light brown to gray oil shale with many thin rich zones. Thinly bedded with
			little turbation. Tuffs abundant but usually thin. Rich zones commonly assoc-
			iated with numerous thin altered tuffs. Oxidized zones common. Vertical
			fractures on broken-up zones common.
			Air and water circulation was lost at about 50' depth.
			Calcitic with some barren marl zones
			Tuff 0.2' thick at 44.4 to 45.3'
			" 0.2' " " 45.5'-45.7'
			" 0.5' " " 52.6'-53.1'

			Stromatolites(?) at 318.7'
			Ostracod dolomite 0.3' thick at 319.6'0319.9'
			" 0.4' thick at 320.6'-321.0' with stromatolites

Corehole 78-12 (Continued)

FROM	TO	THICK-NESS	LITHOLOGIC DESCRIPTION
			Ostracod dolomite 0.3' thick at 322.4'-322.7' with stromtolites?
			" 0.1' thick at 323.5' Nodule
			" 0.2' thick at 324.1'-324.3' contorted
			" 0.8' thick at 326.5'-327.3'
			" " 0.5' thick at 328.6'-329.1' stromatolites?
			COMMENTS:
			Vertical fractures are relatively common, but slickensides are absent.
			Much of the material labeled as tuff may in fact be dolomitic marl, dolomite,
			or thin sandstone units, as textures and colors are often very similar.
			No thick sections of rich, dark oil shale were seen, although thin units up to
			+0~3' thick are common throughout the section. Oxidized zones are common
			to a depth of about 200'.
