

PHYSIOGRAPHIC DIAGRAM of the WORLD OCEAN'S SEAFLOOR

PREPARED BY

T. E. Chase, B. A. Seekins, and J. D. Young
1981

This Physiographic Diagram and the companion Topographic sheet (Plate 2) are designed to display the major geologic features of the world ocean's seafloor. They are intended to aid in location of large structures, use for plotting of additional data and give a comparative view of the seafloor structures.

The Physiographic Diagram was prepared to emphasize the shape of the structures and hence may not be at an exact scale between the features.

The Topographic sheet has the terrestrial contours at the same interval to illustrate the magnitude and abundance of oceanic versus continental features. It is noted that the basic emphasis on both sheets is on the oceanic features and their configuration.

A seafloor profile is included to show some of the minor abyssal features not displayed with the contour interval used.

Plate 1 of 2
NOTE: SEE PLATE 2 FOR ADDITIONAL NAMES OF SEAFLOOR FEATURES AND ISLANDS.
