

EXPLANATION
SAMPLE SITES--Letters are explained on table 1.

□ Anomalous site--sample locality at which the concentration is considered to deviate from the upper limit of normal background values, as determined by inspection of histograms, percentiles, and enrichment relative to crustal abundance.

A Concentration

NOTE
This map is one of a series of geochemical maps concerning the Petersburg area, southeast Alaska. For discussion of sample description, collection methods, media selection, sample preparation, statistical data, and analytical techniques, see Cathrall and others (1983)

REFERENCE
Cathrall, J. B., Day, G. W., Hoffman, J. D., and McDanal, S. K., 1983, A listing and statistical summary of analytical results for pebbles, stream sediments, and heavy-mineral concentrates from stream sediment, Petersburg area, southeast Alaska: U.S. Geological Survey Open-File Report 83-420-A.

Table 1.--Zinc in 1430 normagnetic samples of heavy-mineral concentrates southeast Alaska.
[Concentrations in parts per million; >, greater than value shown; <, detected, but less than value shown; N, not detected at limit of detection or at value shown. Arithmetic mean, 3252; standard deviation, 4418; geometric mean, 1738; and geometric deviation, 2.9, based on unqualified values within the sample population.]

Concentration	Map symbol	Frequency	Percentile
>20,000	A	1	100
20,000	B	9	99.93
15,000	C	5	99.30
10,000	D	7	98.95
7,000	F	13	98.46
5,000	H	23	97.55
3,000	J	26	95.94
2,000	K	31	94.13
1,500	L	16	91.96
1,000	M	31	90.84
700	N	21	88.67
500	O	54	87.20
<500	P	29	83.43
N500	X	1164	81.40
