

Plate 2. A representative example of intermediate performance of the detector, relative to an analyst. Operational settings are used: Xth1 = 2.25, Xth2 = 1.625, Filhi = 0.2 sec, Fillo = 2.0 sec, Win = 4.0 sec. Even though cultural noise is prominent for one-half of the day, there are only all triggers related to it. There are not any microseism-related false alarms. Although small emergent events are occasionally timed late, others are timed adequately. So that the reader can make an independent evaluation, the output of the detector is shown below.

P	LB	QUALITY	YR	DAY	HR	MIN	SEC	AMPLITUDE	PERIOD	S'
