

EXPLANATION

2074
High

Low

Centers of aeromagnetic anomalies. Highest values occur at the X.

Au

Area containing clusters of samples with anomalous concentrations of gold (Au)

As

Area containing clusters of samples with anomalous concentrations of arsenic (As)

Hg

Area containing clusters of samples with anomalous concentrations of mercury (Hg)

Sb

Area containing clusters of samples with anomalous concentrations of antimony (Sb)

Cu

Area containing clusters of samples with anomalous concentrations of copper (Cu)

Pb

Area containing clusters of samples with anomalous concentrations of lead (Pb)

X

Locality with high concentrations of one or more of the following elements:

Au, ≥ 1 ppm
As, $\geq 7,000$ ppm
Hg, ≥ 10 ppm
Sb, $\geq 5,000$ ppm
Cu, $\geq 10,000$ ppm
Pb, $\geq 7,000$ ppm

Figure 19. Synopsis of geology, aeromagnetic anomalies and distribution of Au, As, Cu, Hg, Sb, and Pb.
