Explanation of land classification symbols

I. Level of Favorability
1. The geologic and the inferred geologic environment indicate low favorability for accumulation of mineral resources.
2. The geologic environment and the inferred geologic processes indicate low favorability for accumulation of mineral resources.
3. The geologic environment and the inferred geologic processes indicate moderate favorability for accumulation of mineral resources.
4. The geologic environment and the inferred geologic processes indicate high favorability for accumulation of mineral resources.

II. Level of Certainty
A. The available data provide direct evidence that does not substantiate or contradict the possibility of mineral resources within the respective area.
B. The available data provide indirect evidence that does not substantiate or contradict the possibility of mineral resources within the respective area.
C. The available data provide direct evidence that substantiate the possibility of mineral resources within the respective area.
D. The available data indicate the presence of mineral resources within the respective area.
