SUBJ: Distribution of Published Report

During June 1984, the U.S. Geological Survey, Water Resources Division, conducted a reconnaissance of the quality of groundwater throughout the U.S. Virgin Islands. Water samples were collected from key public-supply wells in St. Thomas, St. John, and St. Croix. A variety of chemical, physical and bacteriological analyses were performed on the samples.

Attached is a copy of the report describing the results of the investigation.

Cordially,

JAN 24 1985

Ferdinand Quiñones, Chief
Caribbean District
Water Resources Division
