## A MESSAGE FROM THE DISTRICT CHIEF

For approximately 50 years, the U.S. Geological Survey (USGS), Water Resources Division, has cooperated with the State of Oklahoma in collecting and interpreting water-resources data for the benefit of the citizens of Oklahoma and the nation. It has been my pleasure to have spent the past twenty years as a member of the USGS team in my home State of Oklahoma. Through many years a close relation has been developed with State, local and other Federal agencies to provide them with accurate and meaningful water information. I am proud of our contribution. As Oklahoma progresses, the demand for water-resources data will increase and the USGS will continue to play an important role in supplying these water-data needs.

Since the publication of our last Activities Report in 1983, a number of projects have been completed and new investigations started. Ground-water studies have been completed on the High Plains (Ogallala) aquifer and a series of publications prepared. Studies to provide hydrologic information on the coal field areas of Oklahoma, water use, and droughts are continuing.

As we enter 1985, projects and data collection programs will be concentrated on important water problems in Oklahoma, such as the study of the hydrology of the abandoned zinc mines in northeastern Oklahoma and the impact water in the mines may have on the freshwater Roubidoux aquifer underlying the mines and on Tar Creek. Other important studies are reevaluations of the ground-water resources in the Rush Springs Sandstone in western Oklahoma and the Cimarron Terrace deposits in the northwestern part of the State.

This summary will be of help to those interested in the work of the USGS and its cooperating agencies. It provides a ready reference to U.S. Geological Survey publications describing the results of previous studies in Oklahoma, the present studies in the State, and the location of the many sites where water information is being collected. To meet our State's needs for up-to-date reliable information on the water resources, the USGS will be proud to provide its know-how and expertise to meet this challenge.

James H. Irwin  
District Chief  
U.S. Geological Survey  
Oklahoma City, Oklahoma

## U.S. GEOLOGICAL SURVEY ORIGIN

The U.S. Geological Survey was established by an act of Congress on March 3, 1879, to provide a permanent Federal agency to conduct the systematic and scientific "classification of the public lands, and examination of the geological structure, mineral resources, and products of national domain." An integral part of that original mission includes publishing and disseminating the earth-science information needed to understand, to plan the use of, and to manage the Nation's energy, land, mineral, and water resources.

Since 1879, the research and fact-finding role of the USGS has grown and been modified to meet the changing needs of the Nation it serves. As part of that evolution, the USGS has become the Federal Government's largest earth-science research agency, the Nation's largest civilian map-making agency, the primary source of data on the Nation's surface- and ground-water resources, and the employer of the largest number of professional earth scientists. Today's programs serve a diversity of needs and users. Programs include:

- ° Conducting detailed assessments of the energy and mineral potential of the Nation's land and offshore areas.
- ° Investigating and issuing warnings of earthquakes, volcanic eruptions, landslides, and other geologic and hydrologic hazards.
- ° Conducting research on the geologic structure of the Nation.
- ° Studying the geologic features, structure, processes, and history of the other planets of our solar system.
- ° Conducting topographic surveys of the Nation and preparing topographic and thematic maps and related cartographic products.
- ° Developing and producing digital cartographic data bases and products.
- ° Collecting data on a routine basis to determine the quantity, quality, and use of surface and ground water.
- ° Conducting water-resource appraisals in order to describe the consequences of alternative plans for developing land and water resources.
- ° Conducting research in hydraulics and hydrology, and coordinating all Federal water data acquisition.
- ° Using remotely sensed data to develop new cartographic, geologic, and hydrologic research techniques for natural resources planning and management.
- ° Providing earth-science information through an extensive publications program and a network of public access points.

Along with its continuing commitment to meet the growing and changing earth-science needs of the Nation, the USGS remains dedicated to its original mission to collect, analyze, interpret, publish, and disseminate information about the natural resources of the Nation--providing "Earth Science in the Public Service."

## WATER RESOURCES DIVISION

### BASIC MISSION AND PROGRAM

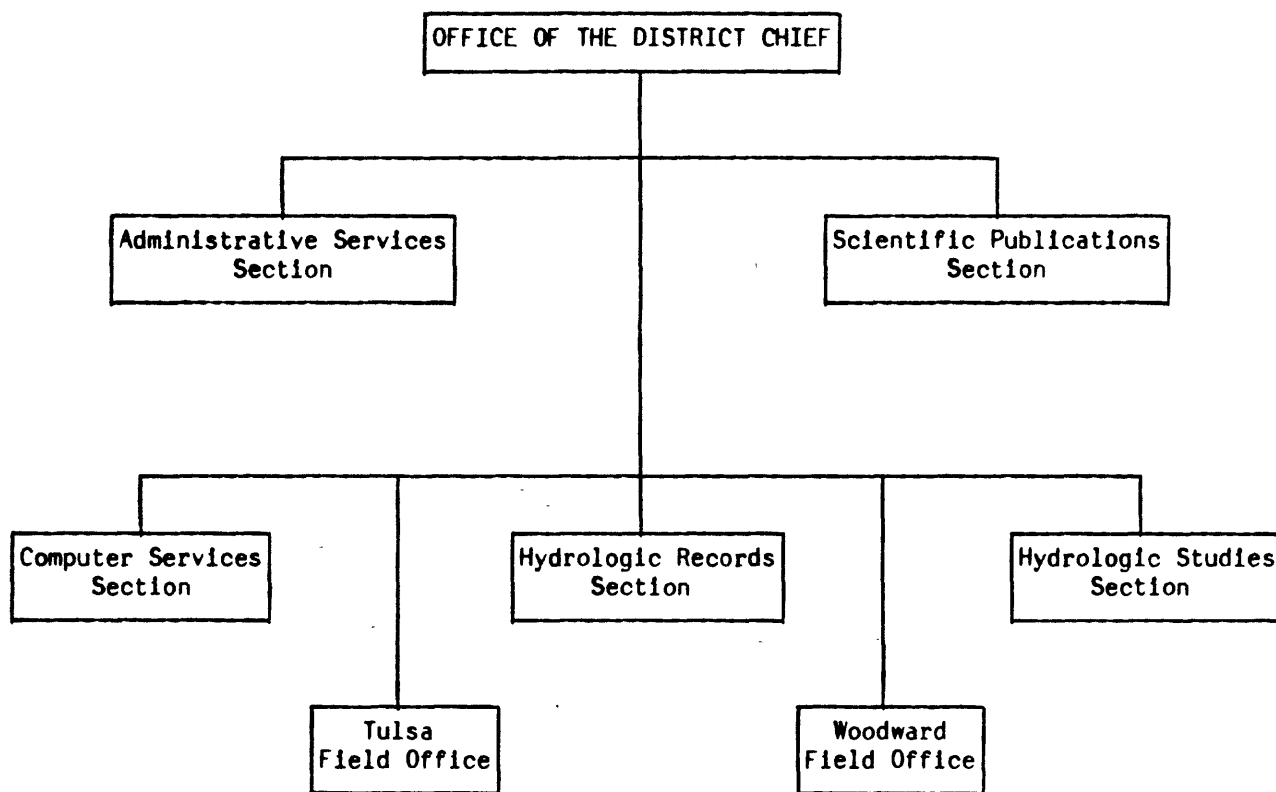

The mission of the Water Resources Division is to provide the hydrologic information and understanding needed for the optimum utilization and management of the Nation's water resources for the overall benefit of the people of the United States.

This is accomplished, in large part, through cooperation with other Federal and non-Federal agencies, by:

- ° Collecting, on a systematic basis, data needed for the continuing determination and evaluation of the quantity, quality, and use of the Nation's water resources.
- ° Conducting analytical and interpretive water-resource appraisals describing the occurrence, availability, and the physical, chemical, and biological characteristics of surface and ground water.
- ° Conducting supportive basic and problem-oriented research in hydraulics, hydrology, and related fields of science to improve the scientific basis for investigations and measurement techniques and to understand hydrologic systems sufficiently well to quantitatively predict their response to stress, either natural or manmade.
- ° Disseminating the water data and the results of these investigations and research through reports, maps, computerized information services, and other forms of public releases.
- ° Coordinating the activities of Federal agencies in the acquisition of water data for streams, lakes, reservoirs, estuaries, and ground waters.
- ° Providing scientific and technical assistance in hydrologic fields to other Federal, State, and local agencies, to licensees of the Federal Power Commission, and to international agencies on behalf of the Department of State.

# OKLAHOMA DISTRICT ORGANIZATION CHART

## OKLAHOMA DISTRICT OFFICE ADDRESSES

District Office Chief: James H. Irwin	(405) 231-4256	U.S. Geological Survey Water Resources Division Room 621 215 Dean A. McGee Avenue Oklahoma City, Oklahoma 73102
Tulsa Field Office Technician in charge: Derryl K. White	(918) 627-6873	U.S. Geological Survey Water Resources Division P.O. Box 45044 Tulsa, Oklahoma 74145
Woodward Field Office Technician in charge: Dale L. Boyle	(405) 256-7636	U.S. Geological Survey Water Resources Division P.O. Box 623 Woodward, Oklahoma 73801

## TYPES OF INVESTIGATIONS AND SOURCES OF FUNDING FOR OKLAHOMA IN 1984

Three broad categories of investigations are conducted in Oklahoma to obtain the information needed by managers and planners for the solution or alleviation of water problems in the State. These three categories are: (1) areal studies involving the appraisal of ground-water resources and river basins, (2) hydrologic data collection involving the statewide surface-water, ground-water, and quality-of-water monitoring programs, and (3) research involving special studies that improve our understanding of hydrology. The diagram below shows these investigations expressed as a percentage of the District's total work for fiscal year 1984.

The investigations shown in the above diagram are supported by services and funds from three basic programs: (1) cooperative programs which are supported by 50 percent of the funds being provided by State and Local agencies and the remaining 50 percent by Federal funds (2) Federal programs which are supported by funds appropriated directly to the U.S. Geological Survey, and (3) other Federal agency programs (OFA) which are supported entirely by other Federal agencies. In fiscal year 1984 the financial support for these three programs in Oklahoma was about \$2,340,000, which was distributed as follows:

## LIST OF COOPERATORS

The following table lists State, local, and other Federal agencies who supported water-resources investigations in cooperation with the U.S. Geological Survey during fiscal year 1984:

### State Agencies

Oklahoma Conservation Commission  
Oklahoma Department of Transportation  
Oklahoma Geological Survey  
Oklahoma State Health Department  
Oklahoma Water Resources Board

### Local Agencies

City of Ada  
City of Altus  
City of Claremore  
City of Lawton  
City of Oklahoma City  
City of Sapulpa  
City of Tulsa  
Central Oklahoma Master Conservancy District  
Ft. Cobb Reservoir Master Conservancy District  
Foss Reservoir Master Conservancy District  
Grand River Dam Authority  
Lugert-Altus Irrigation District  
Mountain Park Master Conservancy District  
Oklahoma Gas and Electric Company

### Federal Agencies

Federal Emergency Management Agency  
U.S. Army Corps of Engineers  
U.S. Bureau of Reclamation  
U.S. Bureau of Land Management

## WATER CONDITIONS IN OKLAHOMA

Oklahoma's surface and ground waters range widely in their availability and quality across the State. The general characteristics of these water resources are described in a series of reconnaissance studies published as hydrologic atlases. (See list of references.) Three of the atlases describe water conditions in each county in the Panhandle of the State and the other nine atlases describe water conditions in two-degree quadrangles covering the remainder of the State (fig. 1).

The distribution of water continues to be one of the major water-resource problems in Oklahoma. In general, surface water of adequate quality for most of man's uses is abundant in the eastern half of the State (fig. 2) while the western half is deficient in surface-water. The western counties rely predominantly on ground water while the eastern counties rely predominantly on surface water (fig. 3).

Oklahoma's major aquifers include alluvium and terrace deposits, the Ogallala Formation (High Plains aquifer), and consolidated deposits that include limestone, sandstone, and gypsum (fig. 4). Significant ground-water declines have occurred in some of the aquifers in the western part of the State because of extensive irrigation. This irrigation, particularly in the Panhandle, accounts for about 76 percent of the ground-water withdrawals in Oklahoma.

Not only are some of the state's aquifers being depleted, but some are also being contaminated by man's activities. An aquifer which has gained considerable attention recently is the Roubidoux aquifer in the northeastern corner of the State. This freshwater aquifer may be threatened by contamination from downward leakage of acid water from the abandoned zinc mines. Current activities by the State of Oklahoma in this mine area are aimed at alleviating the potential contamination hazard to the Roubidoux, a major source of public water supply in the area.

Another major problem for Oklahoma is periodic flooding which can occur almost anywhere in the State. One of the major floods of record occurred in the Tulsa area during May 1984 as the result of a thunderstorm, which persisted over the area for more than 24 hours. Flood-prone areas for much of Oklahoma have been delineated by the Oklahoma District and this information is available in a series of maps (fig. 5).

Water-resources problems in Oklahoma have no easy solutions. The problems can be solved only by long-term comprehensive planning and management, which require reliable hydrologic information. As the State's population increases, an increasing demand will be placed on Oklahoma's water resources. The current activities of the Oklahoma District address many of the State's problems described above. These activities, which are described in the following pages, are designed to provide hydrologic data and related information necessary for the best utilization and management of both Oklahoma's and the Nation's water resources.

## SUMMARY OF CURRENT AND RECENTLY COMPLETED PROJECTS

Title: SURFACE-WATER STATIONS

Leader: Joanne K. Kurklin

Number: OK 00-001

Purpose and Scope: To collect, analyze, and publish surface-water records for stations operated by the U.S. Geological Survey and cooperating agencies.

Progress: Continuous discharge records were collected at 126 streamflow sites and continuous stage and contents were collected for 31 lakes and reservoirs. Table 1 includes a list of all current gaging stations maintained in the State. The location of these gaging stations is shown in figure 6.

Cooperating Agencies: See codes at end of report for "COOP" given in tables 1 and 2.

Title: GROUND-WATER STATIONS

Leader: Joanne K. Kurklin

Number: OK 00-002

Purpose and Scope: To collect, compile, and publish records of the ground-water levels in wells at selected sites throughout the State.

Progress: During the 1984 water year, monthly or quarterly water levels were measured at 10 sites in the State and continuous measurements were obtained at 37 sites. A description of these wells is given in table 3 and their locations are shown in figure 7. Nearly 1,100 wells were measured once during the 1983-84 winter season by the Oklahoma Water Resources Board and the U.S. Geological Survey. These wells tap the principal aquifers throughout the State. Figure 8 shows the number of wells in each county included in the winter measurement program. Publication of the 1983-84 water level records is scheduled for March 1985.

Cooperating Agency: Oklahoma Water Resources Board

Title: WATER-QUALITY STATIONS

Leader: Joanne K. Kurklin

Number: OK 00-003

Purpose and Scope: To collect, analyze, and publish water-quality records for stations operated by the U.S. Geological Survey.

Progress: Water quality data for the 1984 water year were collected at 39 streamflow sites and 19 sites on 3 reservoirs. The sites are listed in tables 1 and 2 and their locations are shown in figure 9.

Cooperating Agencies: See codes at end of report for "COOP" given in tables 1 and 2.

Title: SEDIMENT STATIONS

Leader: Stephen P. Blumer

Number: OK 00-004

Purpose and Scope: To provide a national bank of sediment data for use in broad Federal and State planning activities and to provide sediment data for management of Oklahoma's waters.

Progress: Sediment data are presently collected at 36 streamflow sites. These sites are listed in tables 1 and 2 and are identified under the "Water Quality Parameter" column as "S". Figure 10 shows the location of each site.

Cooperating Agencies: See codes at end of report for "COOP" given in tables 1 and 2.

Title: NADP ACID-RAIN MONITORING STATIONS

Leader: Joanne K. Kurklin

Number: OK 00-005

Purpose and Scope: To collect continuous data on the quantity and quality of precipitation in Oklahoma. The project is part of the National Atmospheric Deposition Program (NADP).

Progress: Water quality data for 1984 were collected at one site (Great Salt Plains NWR near Jet). Samples were analyzed by the Central Analytical Laboratory at Champaign, Illinois and summarized in publications of the NADP. In the 1985 water year, one additional site was established at Goodwell.

Cooperating Agency: None (U.S. Geological Survey)

Title: LIMITED DETAIL FLOOD INSURANCE STUDIES

Leader: Robert L. Tortorelli

Number: OK 85-006

Purpose and Scope: To study flood problems in the communities of Dover, Pocola, and Tishomingo and a part of Bryan County, Oklahoma. These areas are participating in the flood insurance program, administered by the Federal Emergency Management Agency. Hydraulic studies of all prominent streams in these areas will be made to determine elevations and flood boundaries for the 100-year flood. These flood insurance studies will supersede existing approximate 100-year flood prone maps where they are coincident. Existing flood-prone area maps are shown in figure 5.

Progress: Initial planning has been completed.

Cooperating Agency: Federal Emergency Management Agency (FEMA)

Title: OKLAHOMA WATER-USE DATA SYSTEM

Leader: Jerry D. Stoner

Number: OK 79-007

Purpose and Scope: To operate and maintain a Water-Use Data System for Oklahoma. The system provides information to support planning, development, management, and conservation of the water resources of Oklahoma.

Progress: All county water withdrawal data from 1980 through 1983 has been aggregated and stored in the National Water Use Data System. The report "Estimate of Self-supplied Domestic Water Use in Oklahoma During 1980" has been published as U.S. Geological Survey Water-Resources Investigations Report 83-4223. A report comparing reported withdrawals versus estimated use for 1982 is in the final preparation stage.

Cooperating Agency: Oklahoma Water Resources Board

Title: INVESTIGATION AND ANALYSIS OF  
FLOODS FROM SMALL WATERSHEDS  
IN OKLAHOMA

Leader: Leland D. Hauth

Number: OK 64-010

Purpose and Scope: To verify and refine previously defined flood frequency equations derived from a rainfall-runoff model calibrated for small watersheds. Storm hydrographs and annual peak discharges collected from an additional 10 years of record will be used to examine: (1) the sensitivity of the number and size of storm events on the model parameters; (2) true model calibration error; and (3) the observed station flood frequency curve.

Progress: Characteristics of storm hydrographs have been adequately defined; therefore, continuous monitoring of stage and rainfall has been terminated. The present crest-gage network, which includes 37 gages to collect peak discharge data, was maintained through the 1984 water year, at which time 20 years of record were available. The network of 37 gages was reduced to 5 gages beginning in 1985. The rainfall-runoff model verification and final report will be completed in 1985. The station network is listed in tables 1 and 2 and their locations are shown in Figure 11.

Cooperating Agencies: Oklahoma Department of Transportation

Title: HYDROLOGIC DATA ON COAL  
LEASE AREAS IN EASTERN  
OKLAHOMA

Leader: Robert L. Tortorelli

Project Number: OK 76-039

Purpose and Scope: To assess the regional variability of the hydrology and to monitor changes in the quantity and quality of the surface and ground waters in eastern Oklahoma coal areas as a result of strip-mining.

Progress: Data collected in the study area includes streamflow, water quality, and sediment data obtained at 5 stream-gaging stations and 8 miscellaneous stream sites; ground-water levels obtained from five wells; well inventories and water-quality analysis obtained at approximately 100 sites; and rainfall intensities recorded at 13 rain gages. Data collection has been terminated and preliminary appraisal reports of the hydrology for four areas (Red Oak, Blocker, Stigler, and Rock Island) have been published as Water Resources Investigations (see list of publications). A rainfall-runoff modeling study of Blue Creek, Red Oak Creek, and Holi-Tuska Creek will be completed in 1985.

Cooperating Agency: U.S. Bureau of Land Management

Title: EASTERN OKLAHOMA COAL HYDROLOGY

Leader: Melvin V. Marcher

Number: OK 77-042

Purpose and Scope: To provide baseline hydrologic data in areas of past, present, and future strip mining in eastern Oklahoma and appraise the effects of mining on the water resources of the area.

Progress: Preparation of the final report is nearly complete. The report will be published by the Oklahoma Geological Survey.

Cooperating Agency: Oklahoma Geological Survey

Title: DEGRADATION BY BRINE OF THE  
CHEMICAL QUALITY OF THE WATER  
RESOURCES OF PARTS OF CREEK,  
LINCOLN, OKFUSKEE, PAYNE,  
POTTAWATOMIE, AND SEMINOLE  
COUNTIES, OKLAHOMA

Leader: Robert B. Morton

Number: OK 77-043

Purpose and Scope: To determine where and to what extent the surface and ground water resources have been degraded by salt water in the vicinity of the Vamoosa aquifer of central Oklahoma.

Progress: The study has been completed and the final report has been written and approved. The report will be published by the Oklahoma Geological Survey.

Cooperating Agency: Oklahoma Geological Survey

Title: WATER RESOURCES MONITORING  
IN THE EASTERN OKLAHOMA COAL  
FIELDS

Leader: Robert L. Tortorelli

Number: OK 77-044

Purpose and Scope: To determine the regional hydrologic system and to document changes in the system that may occur as the result of coal strip-mining. Strip-mining activities in the area may cause degradation of the surface and ground water by solution of minerals exposed by mining.

Progress: Collection of ground-water level data, streamflow and water quality data has been completed and analysis of these data has begun. This study will be terminated in 1986 and a report describing the results of this study will be published.

Cooperating Agency: None (U.S. Geological Survey)

Title: HYDROLOGIC MODELING OF COAL  
CREEK BASIN NEAR LEHIGH,  
OKLAHOMA

Leader: Stephen P. Blumer

Number: OK 78-049

Purpose and Scope: To predict and evaluate by watershed modeling the effects of strip-mining and subsequent land reclamation on the water resources of the Coal Creek basin near Lehigh in southeastern Oklahoma.

Progress: A data report containing all project data collected between May 1977 and January 1982 was published as Open-File Report 84-599. This data is being applied to the U.S. Geological Survey "Precipitation-Runoff-Modeling-System" (PRMS) to evaluate the probable effects of coal surface mining. PRMS will be used to evaluate the impacts of various combinations of precipitation, climate, and land use on streamflow, sediment yield, and general basin hydrology. A report describing the results of this study will be completed in 1985.

Cooperating Agency: U.S. Bureau of Land Management

Title: ANALYSIS OF THE EFFECTS OF  
FLOOD WATER RETARDING  
STRUCTURES ON FLOOD  
DISCHARGE

Leader: Robert L. Tortorelli

Project Number: OK 80-054

Purpose and Scope: To provide a method for estimating peak discharge and frequency of floods for Oklahoma streams having drainage areas less than 2,500 square miles and to develop procedures to adjust these estimates for basins regulated by flood retarding structures.

Progress: A summary of rainfall-runoff data from 45 small basins regulated by flood retarding structures was published as U.S. Geological Survey Open-File Report 81-824. The study has been completed and the final report, U.S. Geological Survey Water-Resources Investigations Report 84-4358 has been approved for publication. The report presents equations describing the relation between flood peak discharge and basins regulated by flood retarding structures.

Cooperating Agency: Oklahoma State Department of Transportation

Title: NUMERICAL SIMULATION OF CHANGES  
IN HEAD AND STORAGE RESULTING  
FROM PROJECTED PUMPING FROM THE  
ANTLERS AQUIFER, SOUTHEASTERN  
OKLAHOMA

Leader: Robert B. Morton

Number: OK 80-057

Purpose and Scope: To provide water managers and users a quantitative description of the Antlers aquifer. This aquifer underlies an area of 4,400 square miles and contains an estimated 70 million acre-feet of water having less than 1,000 milligrams per liter dissolved solids. A digital model has been used to evaluate the aquifer characteristics and to predict the effect of future withdrawals from the aquifer.

Progress: A steady-state simulation of the 1968-70 ground-water levels has been completed and various pumping rates have been applied to the digital model to evaluate potential stress on the aquifer. Also completed is a sensitivity analysis of aquifer recharge and of the hydraulic conductivity for the aquifer and the overlying beds. The final report has been written and is in review. The report will be published by the Oklahoma Geological Survey.

Cooperating Agency: Oklahoma Geological Survey

Title: GEOHYDROLOGY OF THE  
ROUBIDOUX AQUIFER,  
NORTHEASTERN OKLAHOMA

Leader: Scott C. Christenson

Number: OK 80-058

Purpose and Scope: To appraise the quantity and quality of the water resources available in the Roubidoux aquifer for municipal and industrial use. The Roubidoux aquifer occurs at depths between 500 and 1,500 feet within a 4,500 square mile area and ranges in thickness from 100 to 200 feet. Hydraulic and chemical characteristics of the aquifer will be determined.

Progress: The project is complete except for the final report, which is in review. The report will be published by the Oklahoma Geological Survey.

Cooperating Agency: Oklahoma Geological Survey

Title: CENTRAL MIDWEST REGIONAL  
AQUIFER SYSTEMS ANALYSIS  
(CM RASA)

Leader: Scott C. Christenson

Number: OK 81-062

Purpose and Scope: To quantify the flow systems of the deep formations in the Oklahoma section of the Central Midwest Regional Aquifer Systems Analysis. The Oklahoma study includes all formations north of the Choctaw Fault and the Wichita Uplift that are Cretaceous age or older. Special emphasis will be placed on a study of the fresh-water/salt-water interface in the Ozark region of eastern Oklahoma and western Arkansas.

Progress: Large computerized data bases containing information about the geology, chemistry, and hydraulics of the deep formations have been assembled. Maps showing the subsurface geology and the potentiometric levels for each of several hydrogeologic units have been prepared. The investigation includes the development of a solute-transport model and geochemical reaction models.

Cooperating Agency: None (U.S. Geological Survey)

Title: GEOHYDROLOGY OF THE ALLUVIUM AND  
TERRACE DEPOSITS OF THE NORTH  
CANADIAN RIVER FROM OKLAHOMA  
CITY TO LAKE EUFAULA, CENTRAL  
OKLAHOMA

Leader: John S. Havens

Number: OK 82-065

Purpose and Scope: To describe the geohydrologic system and provide hydrologic information which may be used for management and development of the alluvium and terrace deposits of the North Canadian River. The demand for water in the study area, which includes approximately 1,700 square miles from Lake Overholser to Lake Eufaula, is expected to increase due to irrigation, population growth, and economic expansion. A two-dimensional finite-difference model will be used to evaluate hydraulic characteristics of the deposits and make projections of future water levels based on selected pumping rates.

Progress: The model has been calibrated to steady-state conditions. Transient simulations are being made to project the effects of selected pumping rates. A report that includes all the hydrologic data gathered for the project has been published as U.S. Geological Survey Open-File Report 84-808. A final report describing the results of the study will be completed in 1985.

Cooperating Agency: Oklahoma Water Resources Board

Title: A METHOD OF EVALUATING THE  
SEVERITY OF DROUGHT IN OKLAHOMA

Leader: Ronald L. Hanson

Project Number: OK 83-067

Purpose and Scope: To evaluate the potential severity of a drought based on the seasonal base-flow characteristics of selected unregulated streams in Oklahoma. Determinations include the frequency of occurrence of monthly base flow, seasonal assured base-flow recession curves, and probabilities that monthly base flow will exceed projected assured base flow. The base-flow characteristics for selected index streams are being evaluated and used to describe the regional severity of a possible existing or potential drought in Oklahoma.

Progress: The evaluation of base-flow characteristics has been completed for the Blue River in south-central Oklahoma and Clear Creek in the Panhandle of Oklahoma. Similar evaluations are planned for four other streams in the State to provide a statewide measure of drought conditions. A report describing the method of analysis is near completion and a report describing the application of the method for evaluating drought conditions at the index streams is in preparation.

Cooperating Agency: Oklahoma Water Resources Board

Title: GEOCHEMISTRY OF THE TAR CREEK  
LEAD-ZINC AREA IN OKLAHOMA

Leader: David L. Parkhurst

Project Number: OK 83-068

Purpose and Scope: (1) To critically evaluate the thermodynamic data necessary to apply geochemical models to the zinc-cadmium-lead system; (2) to determine the geochemical reactions occurring with these metals in the abandoned mines and in Tar Creek; and (3) to model the chemical reaction of mine-water mixing with ground water of the Roubidoux aquifer.

Progress: Two major samplings of water from the mine workings have been completed and the first major sampling of Tar Creek was conducted. Seven sediment samples were analyzed by scanning electron microscope and 30 sediment samples were submitted for chemical analysis. An aqueous model for zinc is nearly complete. An improved version of the geochemical model PHREEQE has been written and a new version incorporating the Pitzer specific interaction equations is being tested. Numerical modeling of the ground-water flow system has shown that flow in the area is complex and is affected by the geology and water use.

Cooperating Agency: None (U.S. Geological Survey)

Title: AN INVENTORY OF OKLAHOMA SPRINGS

Leader: Robert L. Goemaat

Project Number: OK 84-069

Purpose and Scope: (1) To inventory Oklahoma springs; (2) to measure their discharge, pH, temperature, and specific conductance; and (3) to establish the relation between springflow and ground-water levels.

Progress: A literature search revealed about 65 publications that deal, in some way, with springs in Oklahoma. Information is being extracted from the reports to help locate and characterize springs. All county Soil Conservation Service offices in the State have been requested to supply spring-related information, and all available information related to spring locations has been used to inventory about 60 springs.

Cooperating Agency: Oklahoma Geological Survey

Title: QUANTITATIVE GEOHYDROLOGY OF THE  
ROUBIDOUX AQUIFER IN OTTAWA  
COUNTY, NORTHEASTERN OKLAHOMA

Leader: Scott C. Christenson

Project Number: OK 84-070

Purpose and Scope: To determine the hydraulic properties of the formations above and below the Roubidoux aquifer. Information about the hydraulic properties of these rocks is needed for a better understanding of the functioning of the hydrologic system.

Progress: Results of ground-water flow modeling established the transmissivity of the aquifer within a narrow range. The model indicates that faulting in the study area probably influences hydrologic behavior of the aquifer.

Cooperating Agency: Oklahoma Geological Survey

Title: OVERVIEW OF DISSOLVED-SOLIDS  
TRANSPORT IN THE ARKANSAS  
RIVER BASIN

Leader: Jerry D. Stoner

Project Number: OK 84-071

Purpose and Scope: To determine, from existing data, average dissolved-solids transport and concentrations throughout the Arkansas River basin from the headwaters in Colorado to the mouth in Arkansas. Trends in dissolved-solids concentration in the basin were also determined.

Progress: The project has been completed and the findings are to be published as a chapter in the U.S. Geological Survey publication "National Water Summary, 1984".

Cooperating Agency: None (U.S. Geological Survey)

Title: GEOHYDROLOGY OF ALLUVIUM AND  
TERRACE DEPOSITS OF THE CIMARRON  
RIVER FROM NEAR THE KANSAS STATE  
LINE TO GUTHRIE, OKLAHOMA

Leader: John S. Havens

Project Number: OK 85-072

Purpose and Scope: (1) To describe the geologic setting of the alluvial and terrace deposits along the Cimarron River from Freedom, Oklahoma to Guthrie, Oklahoma; (2) to estimate the approximate quantity of water in storage, the approximate annual recharge and the approximate annual discharge from the alluvium and terrace deposits and associated aquifers to the Cimarron River; (3) to provide estimates of the effects of future withdrawals from the aquifer by means of a digital model of the aquifer-river system; and (4) to document sources of existing and potential natural saline pollution.

Progress: A literature search, using a computerized bibliographic search routine, has been made. Well schedules from all counties within the project area have been retrieved from WATSTORE; these include data on location, water level, aquifer, well depth, and water use. Drafting has begun on the base map, including the geology.

Cooperating Agency: Oklahoma Geological Survey

Title: NUMERICAL SIMULATION OF SATURATED THICKNESS AND STORAGE CHANGES FROM PROJECTED PUMPING FROM THE MARLOW-RUSH SPRINGS AQUIFER, SOUTHWESTERN OKLAHOMA

Leader: Robert B. Morton

Project Number: OK 85-073

Purpose and Scope: To describe the geohydrologic system and provide hydrologic information related to the Marlow-Rush Springs aquifer in southwestern Oklahoma. Model simulations of the effect of future pumping on the aquifer will aid in the management and use of the Marlow-Rush Springs aquifer.

Progress: Elevation map of base of aquifer is completed and digitized. Data collection for the 1984-85 water-table elevations is about 50 percent completed.

Cooperating Agency: Oklahoma Geological Survey

Title: HYDROGEOLOGICAL AND GEOCHEMICAL STUDY OF THE ROUBIDOUX AQUIFER IN THE VICINITY OF THE PICHER MINING FIELD, NORTHEASTERN OKLAHOMA

Leader: Scott C. Christenson

Project Number: OK 85-074

Purpose and Scope: To determine the geologic, hydraulic, and chemical characteristics of the Roubidoux Formation and of the overlying formations that separate the Roubidoux from the mined interval. Specific objectives are to: (1) obtain a suite of geophysical logs for each well prior to plugging; (2) construct a test well and several observation wells in the Roubidoux formation; (3) perform aquifer tests to determine the hydraulic properties and leakage characteristics of the Roubidoux; and (4) collect water samples for chemical and isotope analyses to determine the geochemical evolution and age of water in the Roubidoux.

Progress: Geophysical logging is about 25 percent completed and two possible locations have been selected for the well installations.

Cooperating Agency: Oklahoma Water Resources Board

Title: LIMNOLOGY OF SELECTED COAL-MINE  
PONDS IN THE COAL-MINING REGION  
OF EASTERN OKLAHOMA

Leader: Renee S. Barta

Project Number: OK 85-075

Purpose and Scope: To determine the limnological characteristics of both strip-mine ponds and other non-mined ponds in the coal area of eastern Oklahoma. Hydrologic, chemical, and biological data will be collected and analyzed to determine (1) if limnological differences exist between the mined and non-mined ponds and (2) if limnological differences exist between mined ponds associated with different coal seams, different ages, or different mining and reclamation practices.

Progress: Equipment has been ordered and a tentative sampling schedule has been established. Statistical analyses of available chemical data are being conducted to detect any trends and possible causes for variance between ponds.

Cooperating Agency: Oklahoma Geological Survey

Title: SIMULATED EFFECTS OF PROJECTED  
WATER USE ON THE ANTLERS AQUIFER,  
SOUTHEASTERN OKLAHOMA

Leader: Robert B. Morton

Project Number: OK 85-076

Purpose and Scope: To simulate the effects that projected water use would have on the Antlers aquifer and to present the results in a format that is readily usable by water-management agencies. The specific objectives are to: (1) update the data base assembled for earlier studies of the Antlers aquifer; (2) adapt previously constructed data matrices for use with the USGS modular ground-water model; (3) perform model simulations using projected water withdrawal rates provided by the U.S. Army Corps of Engineers; and (4) present the results of the simulations as maps and tables that depict pertinent hydrologic information for each decennial year from 1990 to 2040.

Progress: Updating of the data base and reformatting of previously constructed data matrices have begun.

Cooperating Agency: U.S. Army Corps of Engineers

Title: HYDROGEOLOGIC CHARACTERISTICS OF  
ROCK UNITS OF LOW PERMEABILITY  
IN OKLAHOMA

Leader: W. F. Horak

Project Number: OK 85-077

Purpose and Scope: To develop the hydrogeologic knowledge that will be required to identify optimal sites for the disposal of hazardous waste in Oklahoma and to assess, in general, the roles of low permeability rock units in the hydrodynamics of Oklahoma's sedimentary basins. The hydraulic properties of some of the predominantly shaley formations in Oklahoma will be determined and an analysis of their solute transport characteristics will be made.

Progress: A review of the pertinent literature has begun and a detailed project planning document is being prepared.

Cooperating Agency: Oklahoma Geological Survey

Title: ANALYSIS OF THE GROUND-WATER  
OBSERVATION WELL NETWORK IN  
OKLAHOMA

Leader: W. F. Horak

Project Number: OK 85-078

Purpose and Scope: To evaluate the current observation-well network and to determine its adequacy in meeting ground-water information needs. Once those needs have been defined, statistical techniques may be used to design a network that will provide areally-distributed data of some minimally acceptable precision with optimum efficiency. It is expected that such an analysis of the current statewide network will indicate some areas where observation wells are too sparse and others where they are unnecessarily dense.

Progress: The project is in the initial planning stages, however, considerable progress has been made in defining ground-water information needs.

Cooperating Agency: Oklahoma Water Resources Board

## OTHER DISTRICT ACTIVITIES IN SUPPORT OF THE STATE'S WATER PROGRAMS

As part of the Geological Survey's responsibility to provide hydrologic information to all water users, the Survey participates in numerous other activities in addition to the regular Federal and State cooperative programs of hydrologic data collection and analysis. These other activities include involvement in various water-related committees and task forces, the review of technical reports on hydrology prepared by other agencies and universities, answering requests for hydrologic data and related information, and presenting information to schools, civic groups, and other interested groups on the water resources of Oklahoma and the Nation. Some of the current special activities are described below:

Committee Activities - Members of the Oklahoma District staff participate in various technical committees and task forces dealing with water problems. Included are: (1) the Governor's Coordinating Committee on Water Resources Research; (2) a ground-water committee to develop water-quality standards for Oklahoma's major aquifers; (3) a water-quality advisory board that reviews the State's ambient surface-water quality monitoring network, selects stream- and lake-sampling sites, determines constituents sampled, and establishes sampling frequency; (4) a task force to evaluate surface- and ground-water contamination from abandoned zinc mines in northeastern Oklahoma; (5) a Rural Abandoned Mine Program (RAMP) committee, which selects for reclamation abandoned surface mines based on their hazard to life and health; and (6) an American Society of Civil Engineers' task committee on water requirements of native vegetation.

Special Activities - During 1984 considerable effort was devoted to collecting flood data and preparing a report on the May 26 flood in the Tulsa, Oklahoma area. A report entitled "National Water Summary 1983" (see list of publications) was also prepared in 1984 which describes the major hydrologic events and issues prevailing in each state of the nation. The District is presently conducting a 3-phase study to define and document the most cost-effective means of furnishing streamflow information in Oklahoma. The first phase of this study has been completed and a report entitled "Use and availability of continuous streamflow records in Oklahoma" (see list of publications) has been published.

## SOURCES OF U.S. GEOLOGICAL SURVEY PUBLICATIONS AND INFORMATION

### BOOKS, MAPS, AND PERIODICALS

Since 1879, the U.S. Geological Survey has served the public and Federal, State, and local governments by collecting, analyzing, and publishing detailed information about the Nation's mineral, land, and water resources. This information is in a variety of map, book, and other formats and is available from several sources within the Geological Survey.

#### Books, catalogs, and pamphlets:

To order USGS book publications, catalogs, and pamphlets, write:

Text Products Section, Eastern Distribution Branch  
U.S. Geological Survey, 604 South Pickett Street  
Alexandria, VA 22304

#### Maps:

To order maps of areas west of the Mississippi River, including Oklahoma and adjacent States, write:

Western Distribution Branch, U.S. Geological Survey  
Box 25286, Federal Center  
Denver, CO 80225

#### New Publications:

To get on the mailing list for the free monthly catalog "New Publications of the Geological Survey" write:

Mailing List Unit, U.S. Geological Survey  
329 National Center  
Reston, VA 22092

#### Open-File Reports:

For information on the availability of microfiche or paper duplicate copies of selected open-file reports, write:

Open-File Services Section, U.S. Geological Survey  
Box 25425, Federal Center  
Denver, CO 80225

## INFORMATION

### Public Inquiries Offices:

USGS Public Inquiries Offices provide general information about the Geological Survey's programs and its publications, and they sell, over the counter, maps of local areas and books of local and general interest. The nearest Public Inquiries Office to the Oklahoma City area is:

U.S. Geological Survey Public Inquiries Office  
Rm. 1-C-45, Federal Bldg., 1100 Commerce Street,  
Dallas, TX 75242  
Telephone: (214) 767-0198

### Data Information Services:

The Oklahoma District also manages the following data information services which provide water-resource data in an easy-to-use and readily available form:

NAWDEX (National Water Data EXchange) provides information on the location and types of data available on water and related subjects. (District contact for this information is Lionel D. Mize.)

WATSTORE (WATER Data STORAGE and RETRIEVAL System) provides the following types of information:

1. Well depth, depth to water, well yield, name of aquifer, and well construction data for nearly 20,000 ground-water wells in Oklahoma.
2. Current discharge and/or quality-of-water data from 156 streams, lakes, and springs in Oklahoma.
3. Current peak-flow data from 42 partial-record stations in Oklahoma.

(District contact for this information is Jonathon C. Scott.)

### General information on Oklahoma water resources and publications:

For general information on water resources and availability of publications dealing with Oklahoma, contact:

James H. Irwin, District Chief  
U.S. Geological Survey, Water Resources Division  
Rm. 621, Old Post Office Building  
215 Dean A. McGee Avenue  
Oklahoma City, OK 73102  
Telephone: (405) 231-4256

<sup>1</sup>--LOCAL IDENTIFIER gives township, range, section number, and quarter-quarter section. (see sketch)

<sup>2</sup>--Codes for AQUIFER and COOP are given on last page of report.

<sup>3</sup>--FREQ is frequency that water level is measured (C)-continuous, (Q)-quarterly, and (M)-monthly.

From Pettyjohn, W. A., and others, 1983,  
Water Atlas of Oklahoma:  
University Center for Water Research,  
Oklahoma State University,  
Stillwater, Oklahoma, 72 p.

Figure 2.--Average annual runoff in Oklahoma for 1970-79.

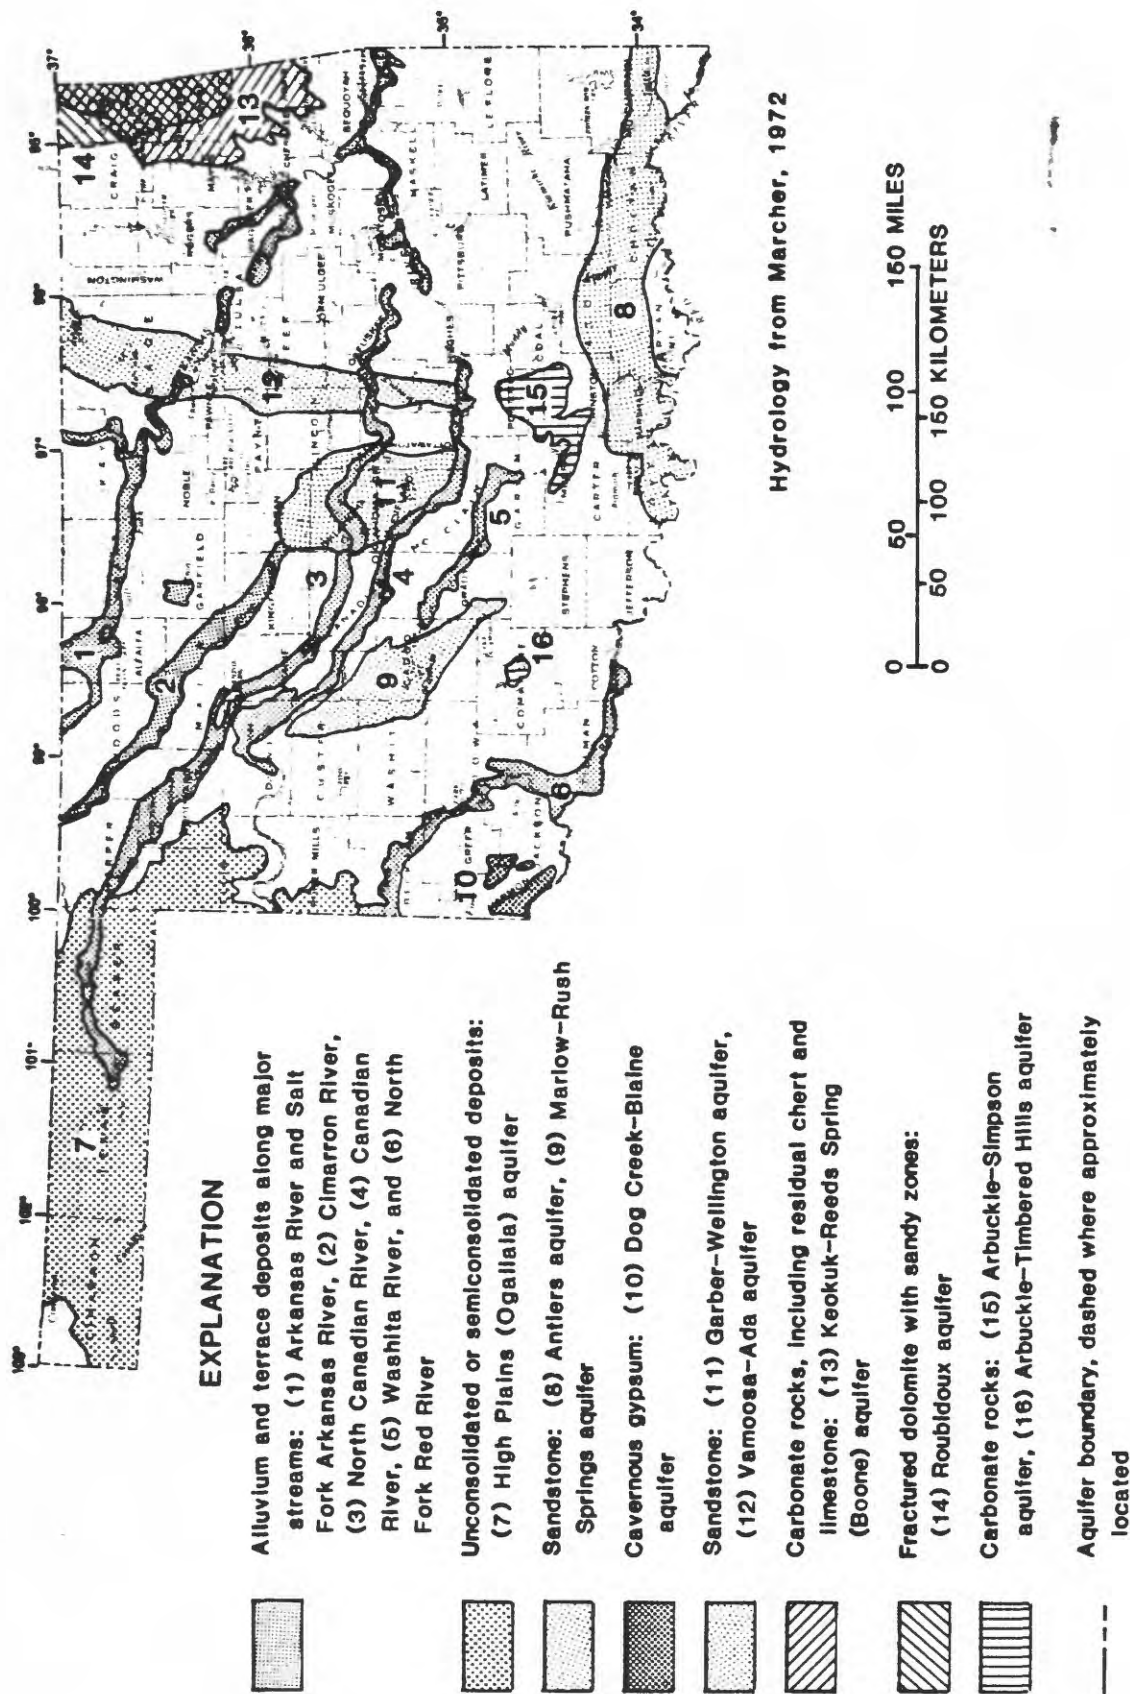

Figure 4.--Location of principal aquifers in Oklahoma.

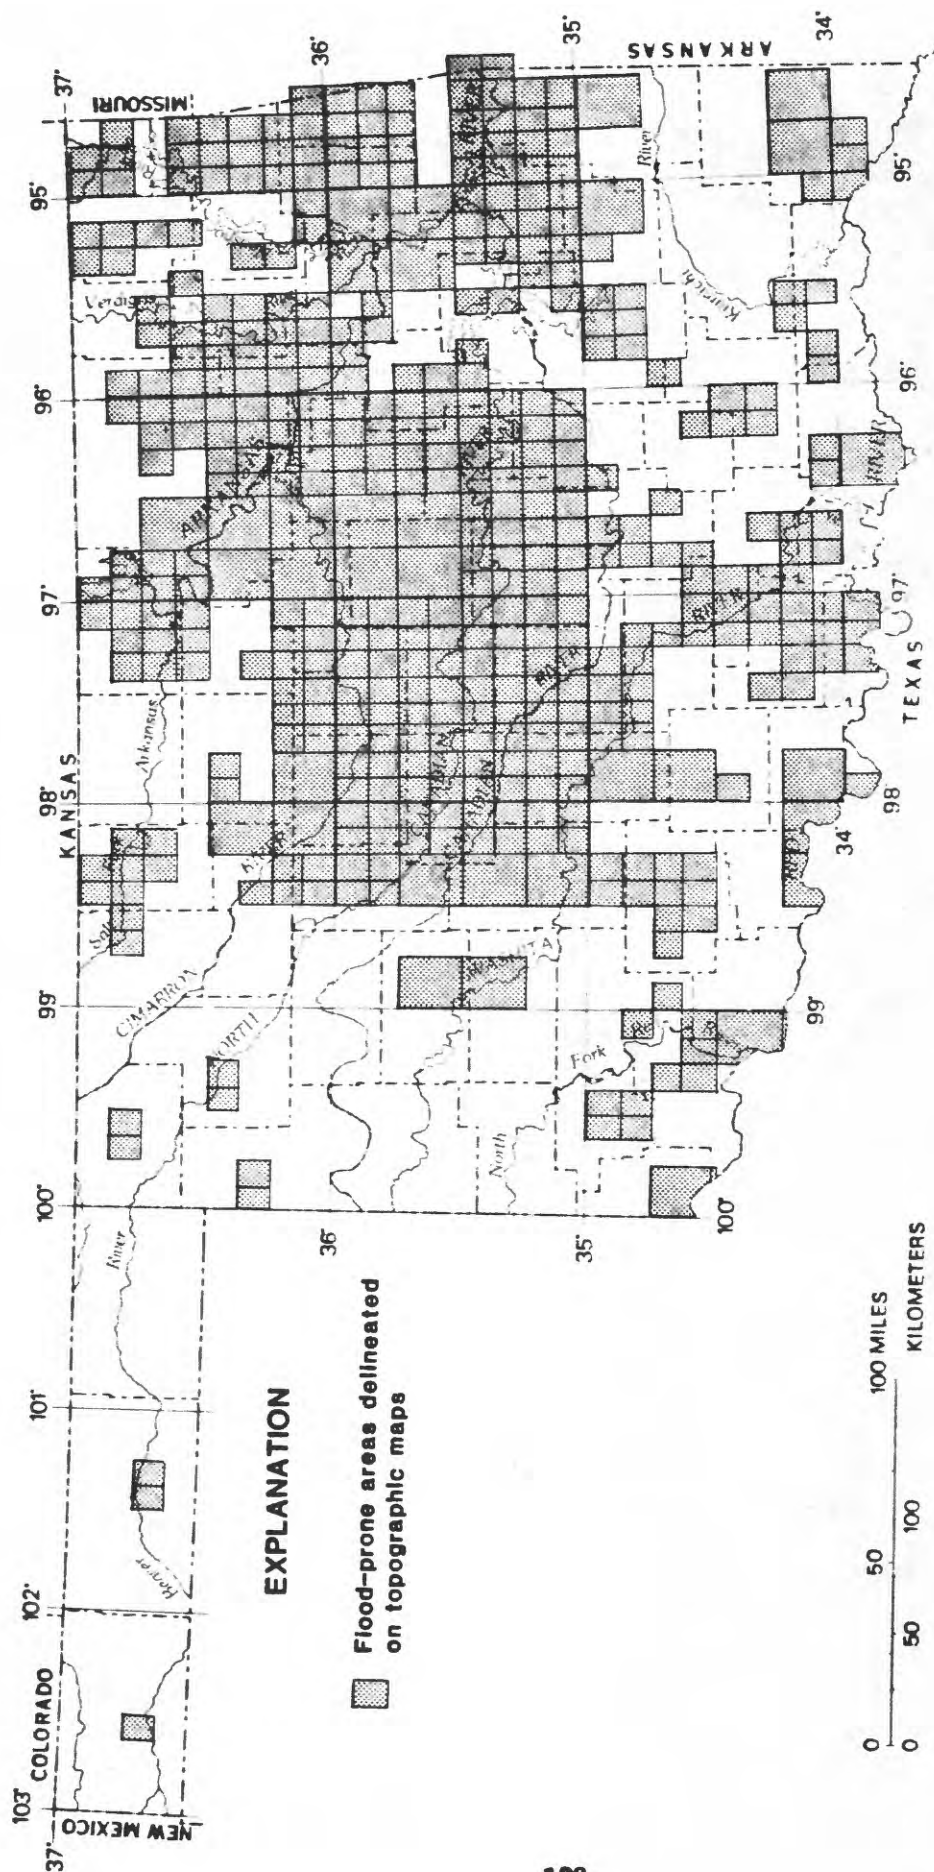

Figure 5.—Index map showing availability of flood-prone area maps in Oklahoma.

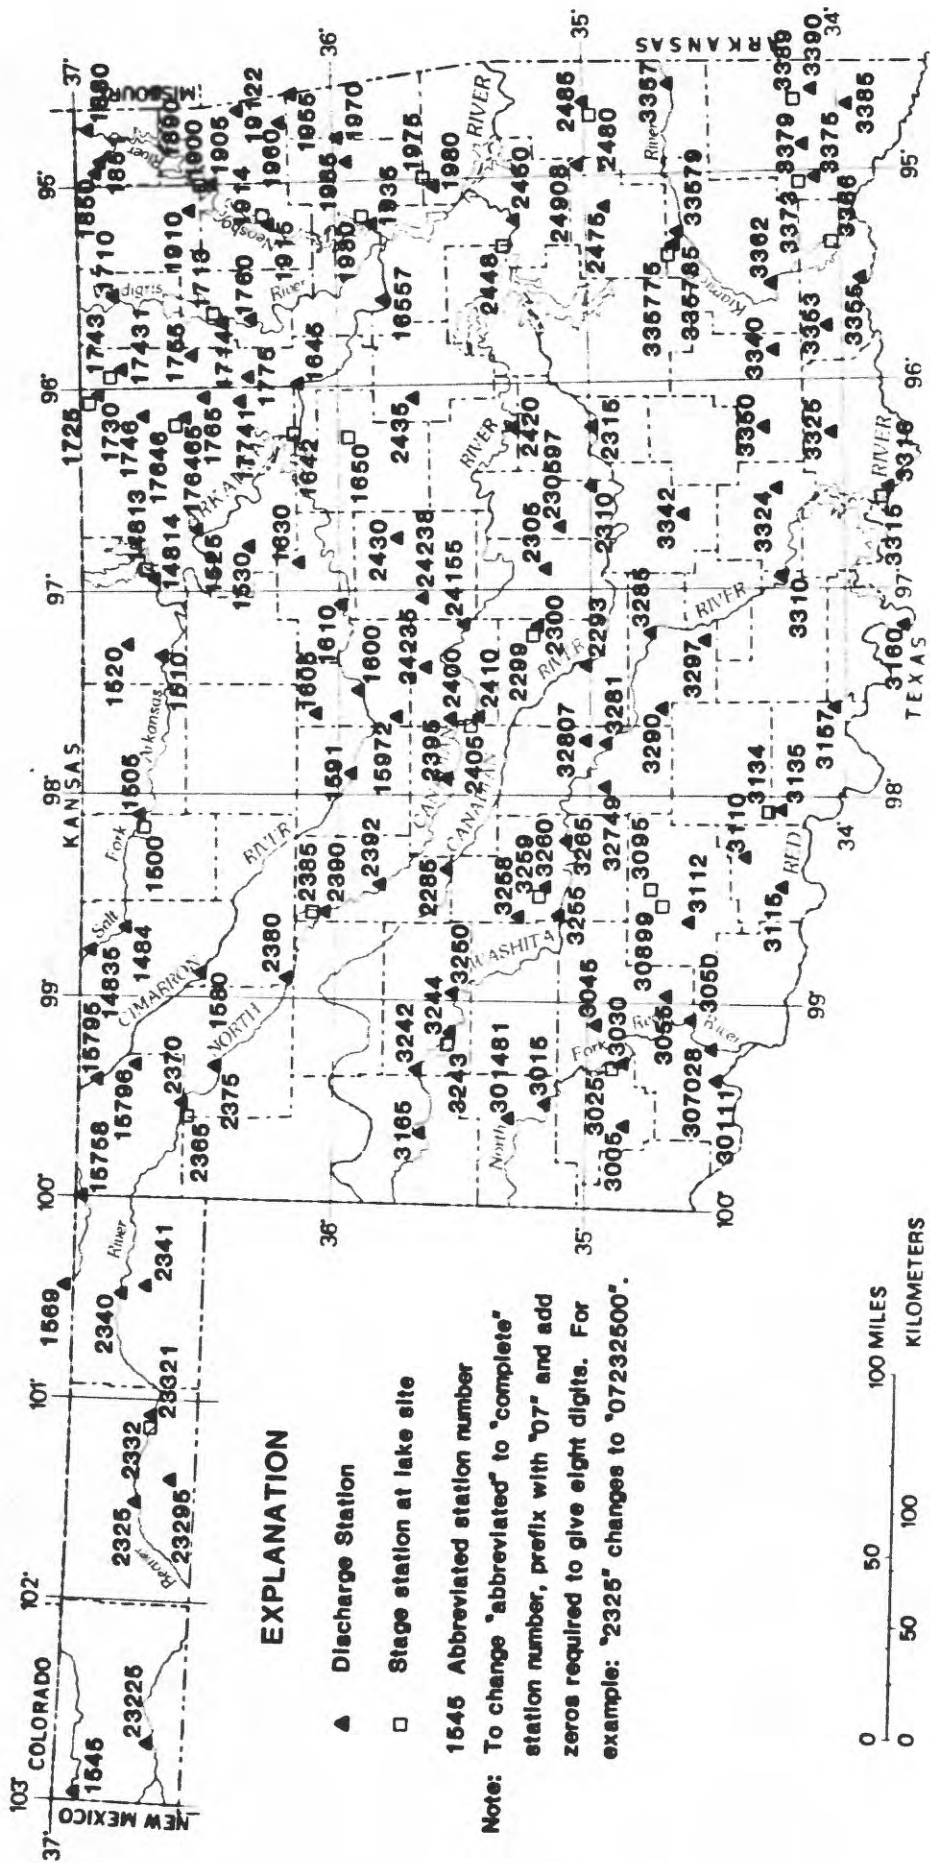

Figure 6.--Locations of continuous-record stream-gaging stations.

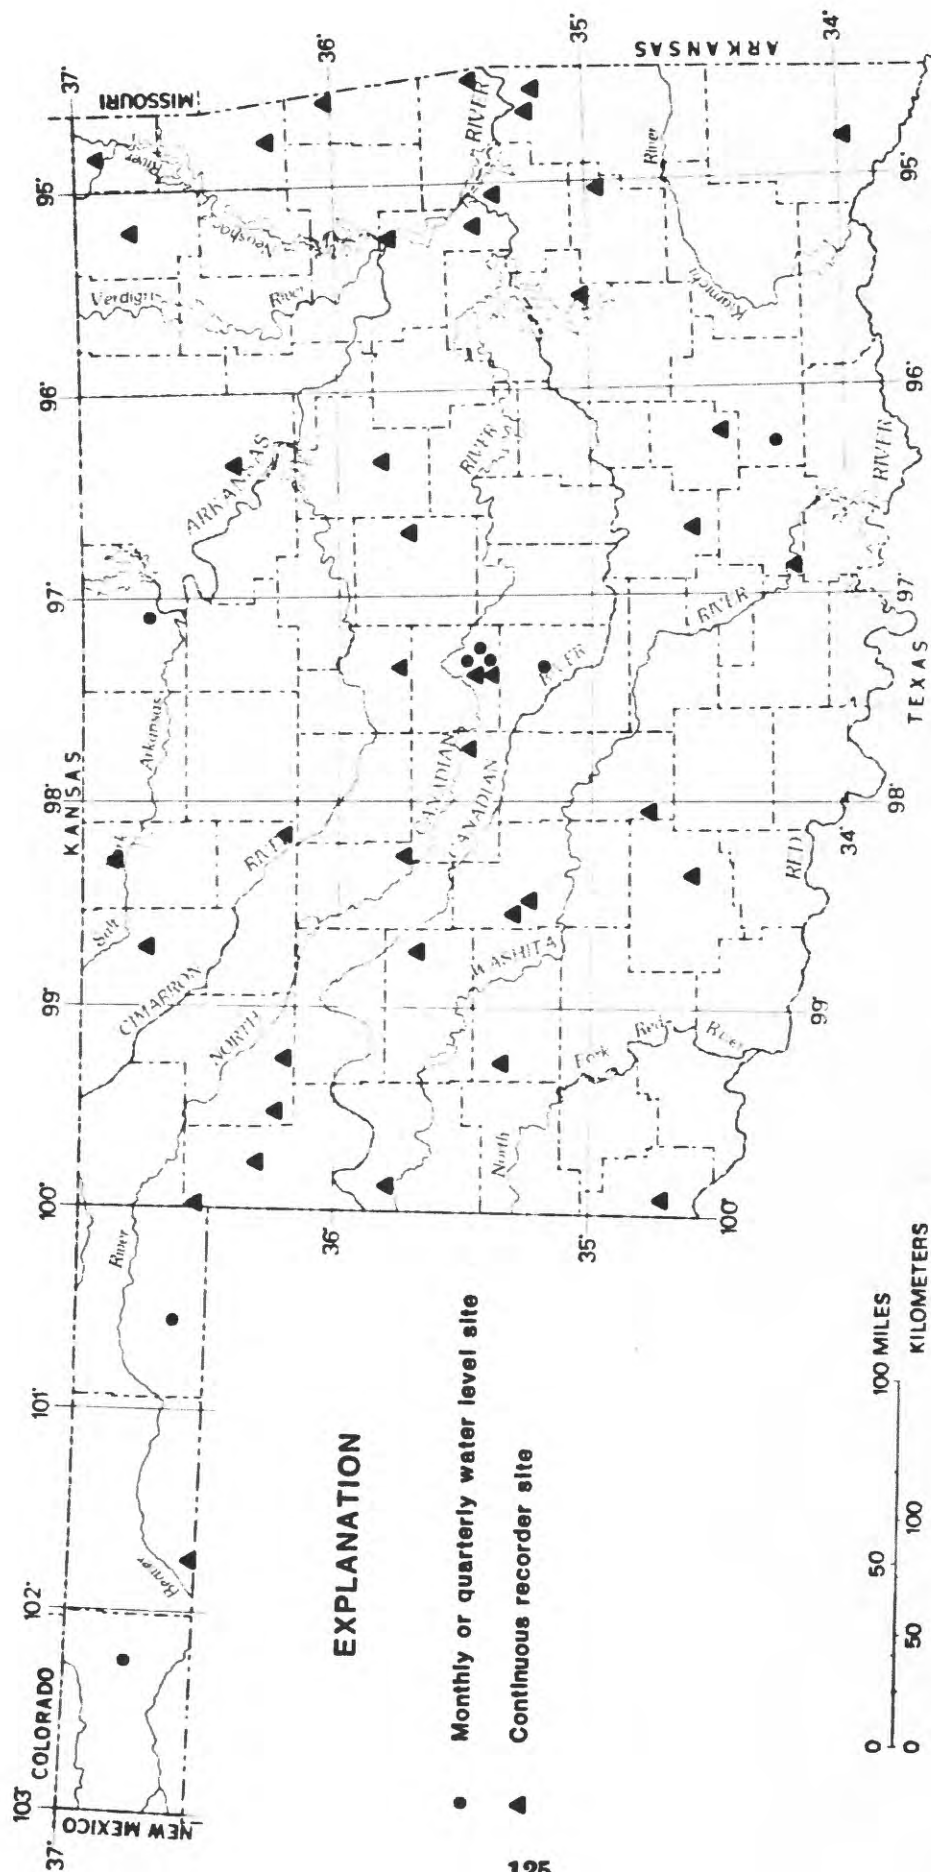

Figure 7.--Locations of water wells measured continuously, monthly, or quarterly.

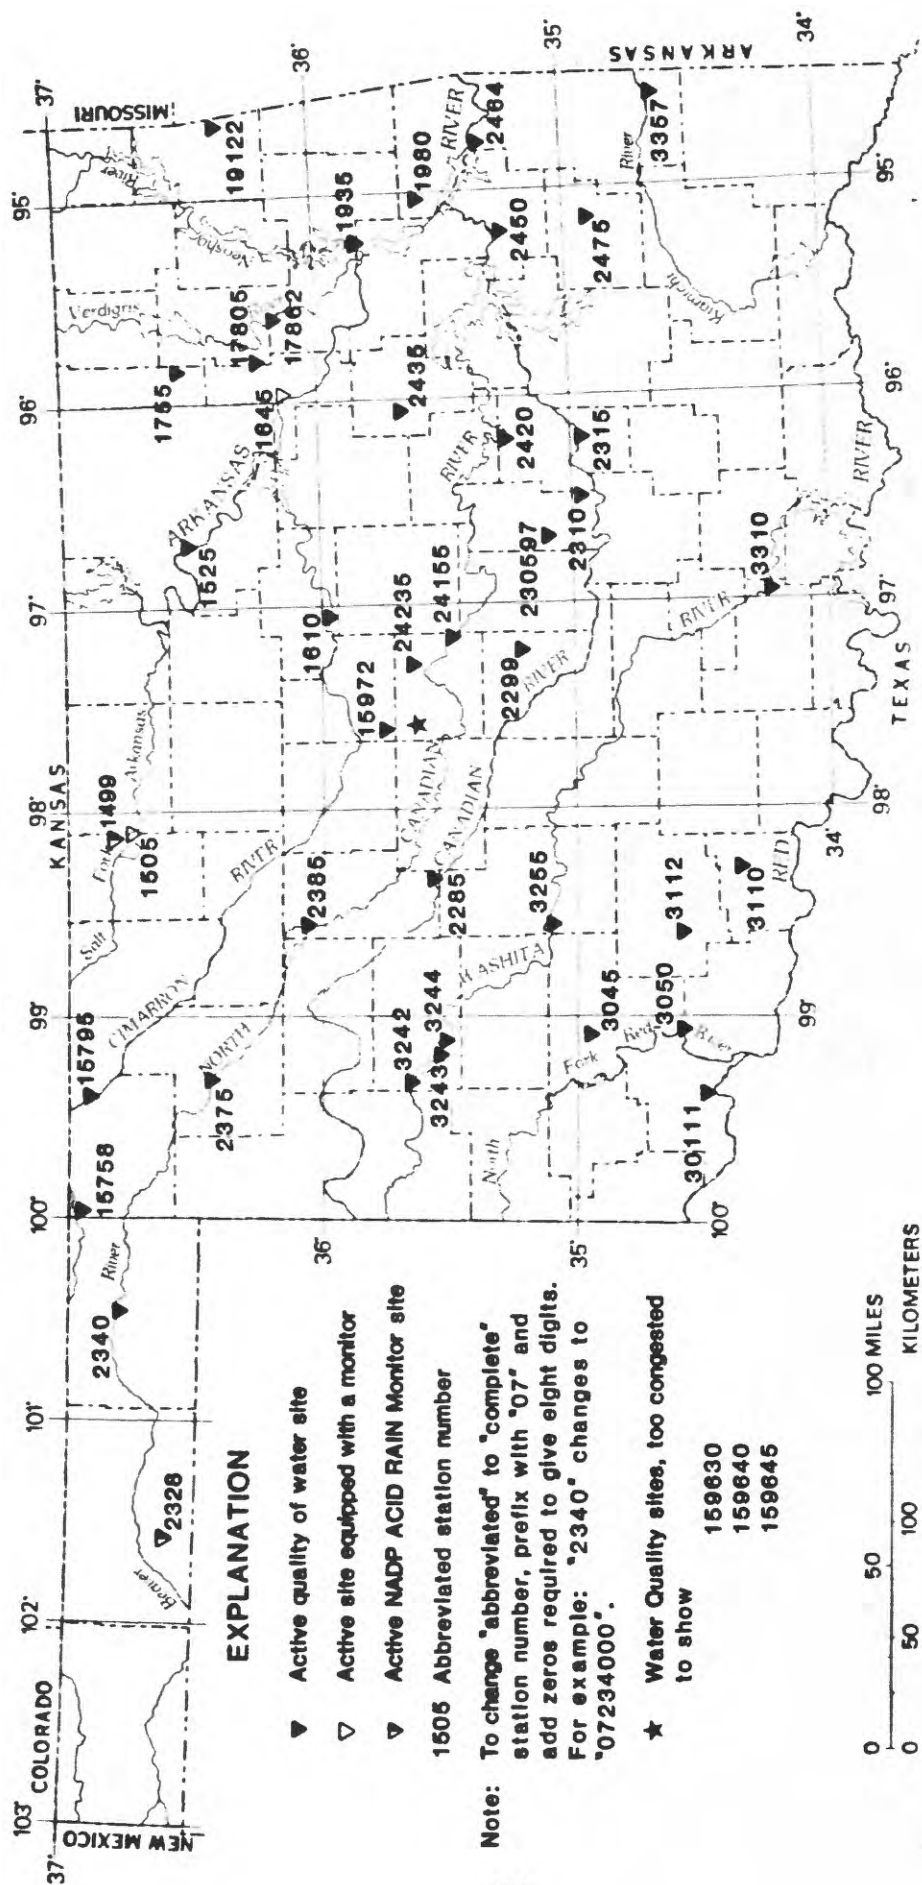

Figure 9.--Locations of quality-water sampling sites.

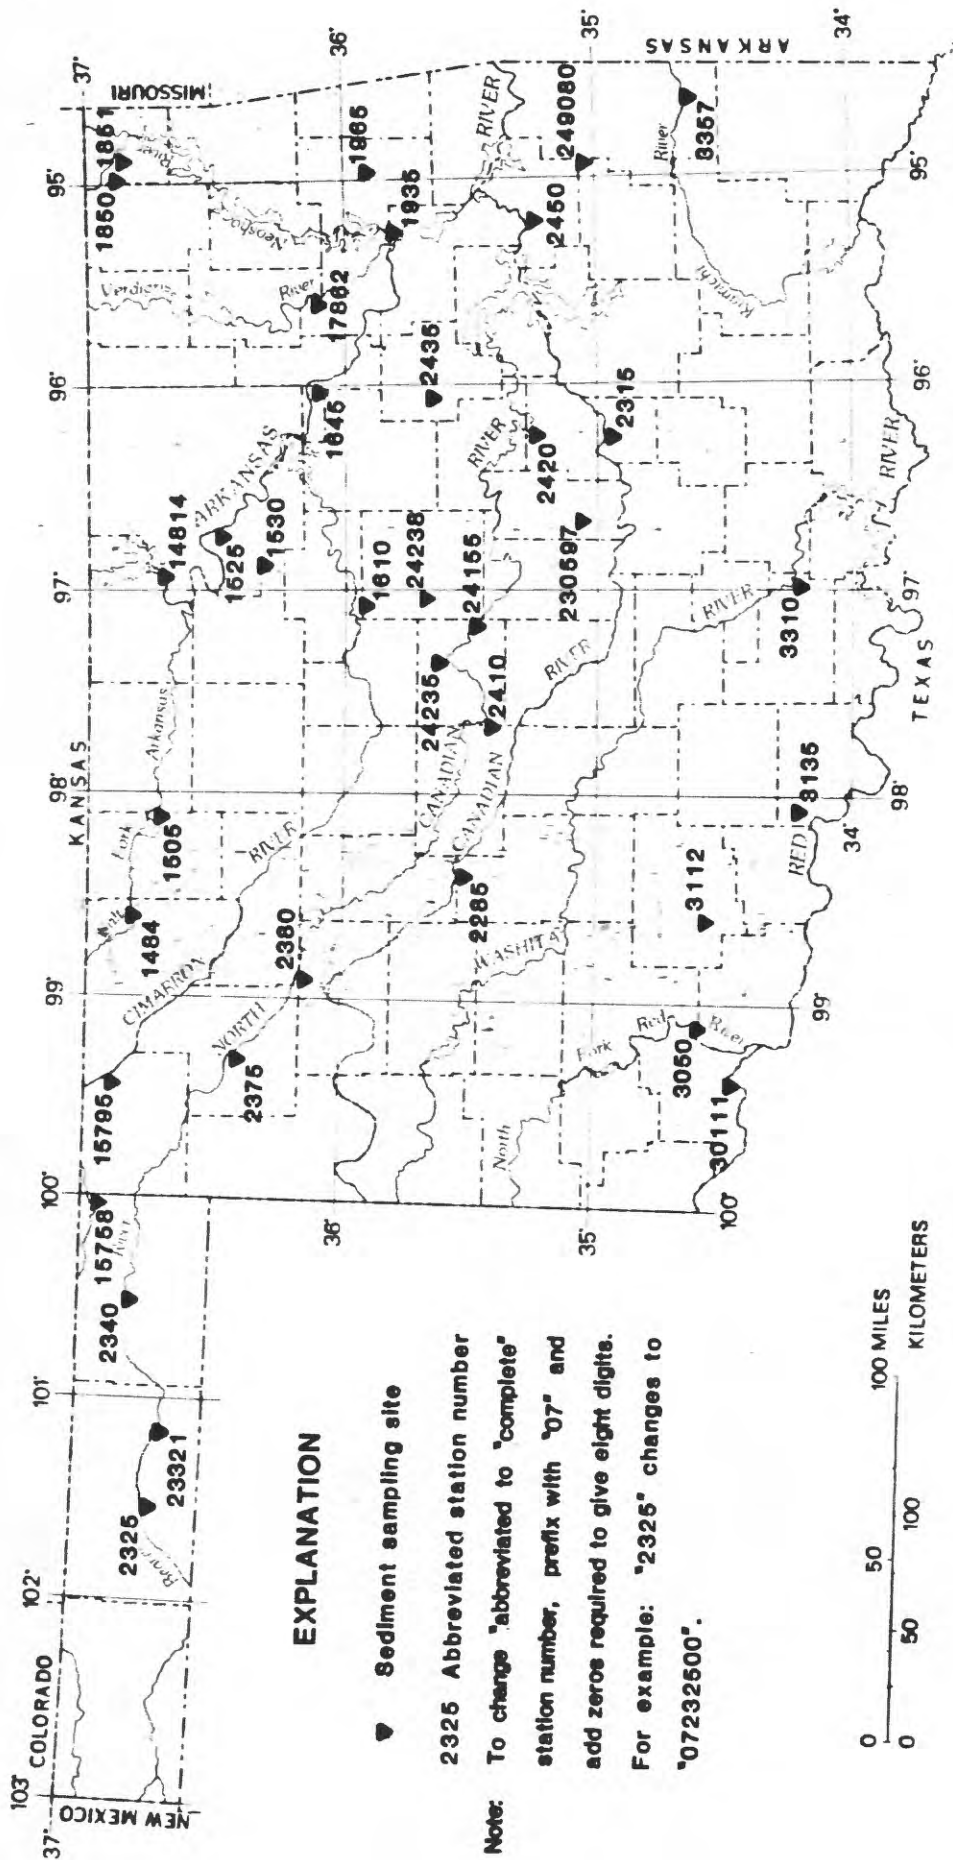

Figure 10.--Locations of sediment sampling sites.

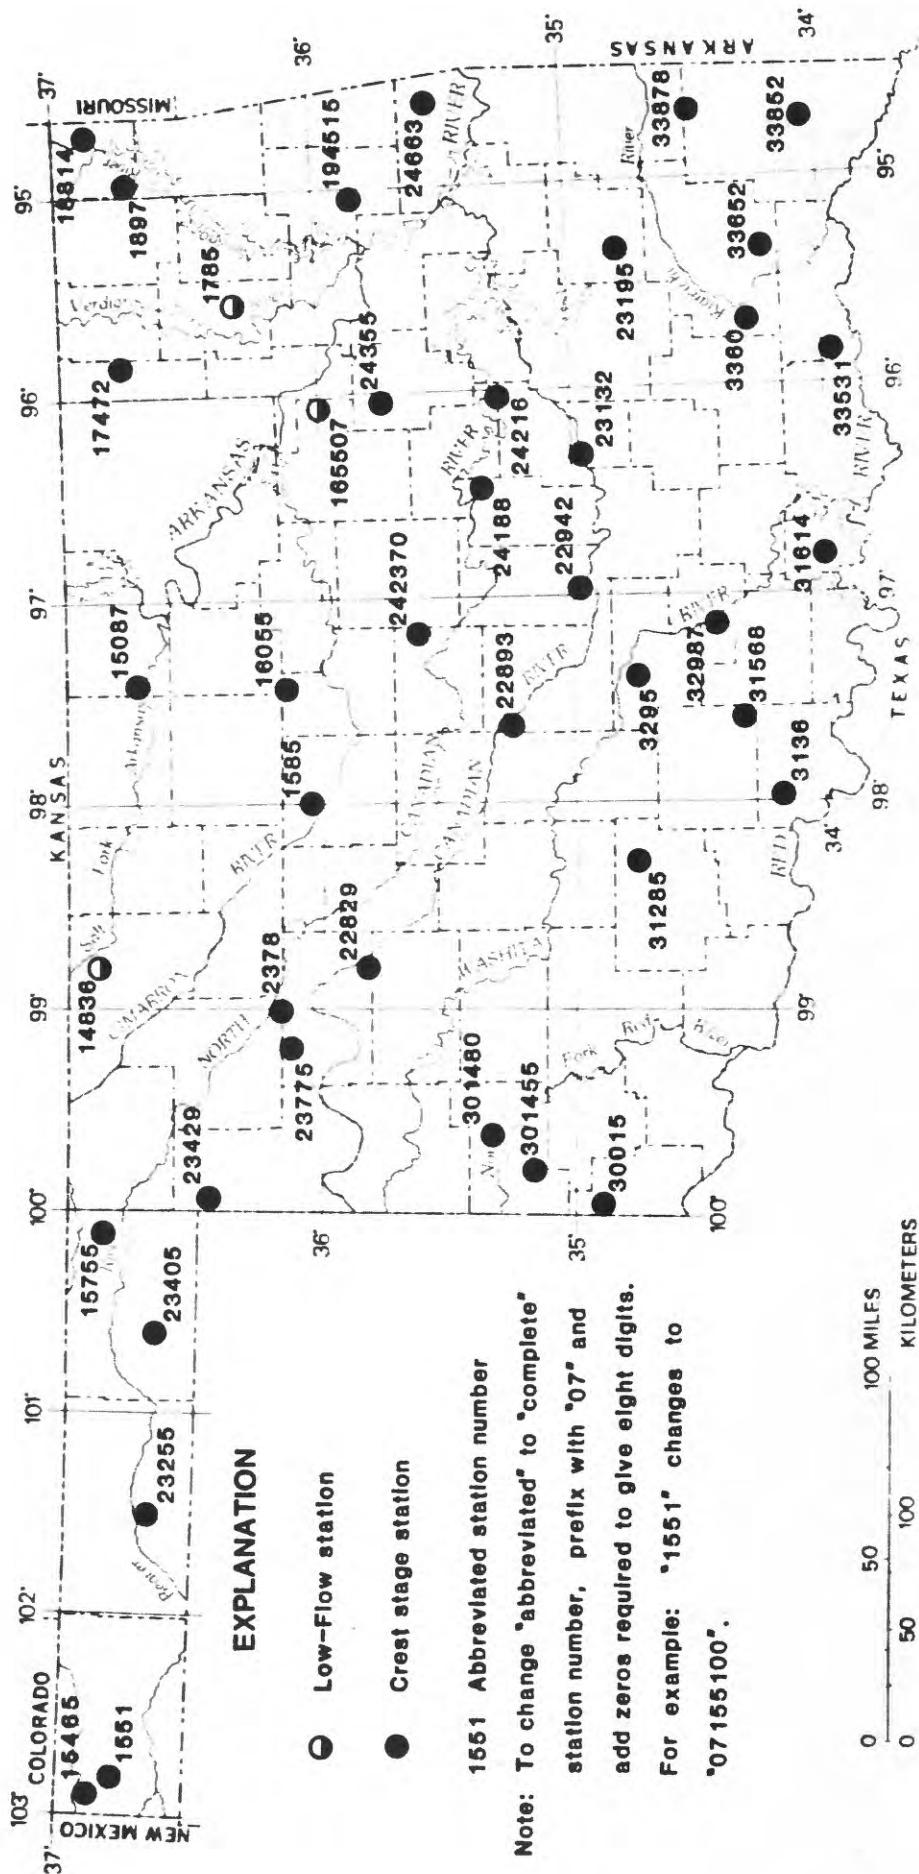

Figure 11.--Locations of partial record stations.

# CODES USED IN TABLES

## Station Type

CS = Crest stage and discharge	RES = Reservoir gage operated and published by USGS.
CSR = Flood hydrograph and rainfall (SR recorder)	RESP = Reservoir gage operated by another agency and published by USGS
LF = Low flow site	RESU = Reservoir gage unpublished
PR = Partial record site	SED = Sediment sample collection
QWD = Quality of water-daily	STGU = Stream gage only-unpublished
QWH = Quality of water-hourly	STR = Stream gage operated and published by USGS
QWP = Quality of water-periodic	STRP = Stream gage operated by another agency and published by USGS
QWMP = Quality of water analyzed by another agency, published by USGS	

## Q.W. Parameters

## Stage Source

B = Biological	BDT = Binary decimal transmitter
C = Chemical	HPT = Hellipot
N = Nutrients	OBS = Daily observer
O = Organic	DAR = DARDC
P = Physical	RES = Resident
R = Radiological	TMK = Telemark
S = Sediment	DCP = Data collection platform (satellite transmitted)

(Some parameters not collected at the frequency indicated by Station Type.)

## Cooperator (Coop)

A = Federal	N = Fort Cobb Master Conservancy District <sup>1</sup>
B = U.S. Bureau of Reclamation	O = Oklahoma Geological Survey
C = U.S. Corps of Engineers	P = City of Tulsa <sup>1</sup>
D = Mt. Park Master Conservancy Dist.	Q = City of Altus <sup>1</sup>
E = Oklahoma Conservation Commission	R = City of Ada <sup>1</sup>
F = Federal Emergency Management Agency	S = City of Sapulpa <sup>1</sup>
G = USGS Cooperative Matching Funds	T = Lugert-Altus Irrigation District <sup>1</sup>
H = Oklahoma Dept. of Transportation	U = City of Lawton <sup>1</sup>
I = U.S. Bureau of Land Management	V = Foss Reservoir Master Conservancy
J = Oklahoma Water Resources Board	W = Operated by neighboring state
K = City of Oklahoma City	X = Oklahoma Gas and Electric Company <sup>1</sup>
L = Grand River Dam Authority	Y = Cities of Edmond and Guthrie <sup>1</sup>
M = Central Oklahoma Master Conservancy District <sup>1</sup>	Z = City of Claremore <sup>1</sup>
	a = Oklahoma State Health Department <sup>1</sup>

<sup>1</sup> Funds provided through the Oklahoma Water Resources Board

## Aquifer Symbols

ABCKU = Arbuckle, upper	DGCK = Dog Creek
ATCK = Atoka	GRBR = Garber-Wellington
ALRS = Antlers	MCAL = McAlester
ALVM = Alluvium	OGLL = Ogallala
BGGY = Boggy	RBDX = Roubidoux
BOON = Boone	RSPG = Rush Springs
CDHL = Cedar Hills	VMOS = Vamoosa
ELKC = Elk City
