EXPLANATION

- SOUTHEAST -- Hydrologic Subregion
- 19060000 -- Hydrologic Unit Code
(assigned by U.S. Water Resources Council
and used by U.S. Geological Survey for
managing its National Water Data Network)
- Subregional boundary within the Alaska
region

Index to hydrologic subregions of Alaska referred to in this report.

ALASKA INDEX: STREAMFLOW AND WATER-QUALITY RECORDS
TO SEPTEMBER 30, 1983

By Patsy J. Still and Karen V. Jones

INTRODUCTION

This index lists stations throughout Alaska (see map on facing page) at which streamflow and water-quality data have been collected by the U.S. Geological Survey. The stations are listed by hydrologic subregion (figs. 1-6 and tables 1-6).

Most of the data referred to in this index have been published in reports of the Geological Survey. Water-quality data which were not included in those reports have been placed in the Survey's national computer storage system and are available through data-retrieval programs. Some of the older streamflow data have not been entered into the computer system. Geological Survey Water-Supply Paper (WSP) 1372 contains a summary of previously published records of monthly and annual discharges through September 1945, as well as records of daily and monthly discharges for the water years 1946-50 that had not yet been published. Water-Supply Paper 1372 also contains other stream chemical quality data collected between September 1948 and September 1950 and some earlier data for the Yukon River at Anvik. Since 1950 data have been published in Water-Supply Papers as shown in the following list:

<u>Water year</u>	<u>WSP number</u>	<u>Type of data</u>	<u>Water year</u>	<u>WSP number</u>	<u>Type of data</u>
1951-53	1466	(Streamflow & water quality)	1964	1959	(Water quality)
1954-56	1486	"	1965	1966	(Water quality)
1957	1500	"	1966	1996	(Water quality)
1958	1570	"	1967	2016	(Water quality)
1959	1640	"	1968	2100	(Water quality)
1960	1720	"	1966-70	2136	(Streamflow)
1951-60	1740	(Streamflow)	1969	2150	(Water quality)
1961-63	1953	(Water quality)	1970	2160	(Water quality)
1961-65	1936	(Streamflow)			

Data have also been published in a series of annual reports, "Water Resources Data for Alaska"--since 1961 for streamflow records and since 1964 for water-quality records.

This index lists: continuous-record stream-gaging stations, crest-stage gage and low-flow partial-record stations; daily chemical, sediment, and temperature stations; and stations where chemical, sediment, and biological data have been collected on an intermittent basis.

Stations are listed in order of their location in a downstream direction along the main stream. Stations on tributaries are listed between stations on the main stream in the order in which those tributaries enter the main stream. Stations on tributaries entering above all main-stream stations are listed before the first mainstream station. Stations on tributaries to tributaries are listed in a similar manner.

EXPLANATION OF TABLES

Station Identification

Numbers have been assigned to each station as an added means of identification and are of two types. In the 8-digit number, such as 15008000, the first two digits, "15", denote Alaska and the remaining six digits, "008000" indicate downstream order. These assigned numbers are in numerical order but are not consecutive. They are selected from the complete 6-digit number sequence so that intervening numbers will be available for future assignment to new locations.

A 15-digit identification number, which is the original latitude and longitude location plus a 2-digit sequence number, has been assigned to water-quality stations where data have been collected on an intermittent basis. This number may differ from the currently assigned location because of revisions to the topographic maps or adjustments to the original location. These stations are inserted in the standard downstream order.

Name

The station name consists of the name of the stream and in some instances its position relative to another physical feature or the nearest town. The name shown is that most recently used in publication. Another name may have been used in earlier publications.

Location

All station locations have been assigned a latitude and longitude determined from the most recent topographic maps available for the respective areas.

Drainage Area

The drainage area of a stream at a specific point is that area, measured in a horizontal plane, enclosed by a topographic divide from which direct surface runoff from precipitation normally drains by gravity into the stream above the specified point. Drainage areas given herein include all closed basins or noncontributing areas within the area unless otherwise noted.

Streamflow Stations

Continuous record: A stream-gaging station for which the discharge or stage data are published on a daily, weekly, or monthly basis for a continuous period of time. Annual extremes of discharge, stage, and low flow are also determined for most stations.

Crest-stage partial record: A station for which only the annual maximum discharge and stage data are published over a period of years.

Low-flow partial record: A station for which measurements of low flow are published. For some stations, measurements made periodically through the year are also included.

Discharge measurements have been made at many ungaged sites and published as "Discharge at Miscellaneous Sites" in the annual data reports. These sites are not included in this index, nor are the data entered in the Survey's computer storage system.

Water-Quality Stations

Chemical: A station at which samples have been collected on either a daily or intermittent (one or more samples per year) basis for one or more of the following constituents: major cations and anions, specific conductance, pH, dissolved oxygen, color, trace metals, nutrients, radiochemicals, or pesticides.

Water temperature: A station at which either continuous or once-daily temperature records have been collected. Water temperatures are also usually measured when discharge measurements are made and water-quality samples are collected, but are not indicated in this report.

Sediment: A station at which samples for analysis of suspended-sediment concentrations and particle-size distributions have been collected on either an intermittent (one or more samples per year) or daily basis.

Biological: A station at which samples have been collected on either a continuous or intermittent basis for analysis of one or more of the following: phytoplankton, periphyton, or benthic invertebrates.

Water-quality data collected at lakes and springs have been published and entered in the Survey's computer storage system; these data are not included in this index.

Periods of Record

The periods of record for daily or monthly discharge, chemical, water temperature, sediment, and biological data collected are listed as calendar years in which records began or ended; "breaks" in the records of less than a year are not shown. For example, if a record began in October 1923, stopped in April 1932, began again in March 1933, and ended in September 1944, the period of record would be shown as 1923-44.

The "crest-stage annual peaks" and "low flow" periods of record show the water years for which the record of annual maximum or minimum discharge is available. The water year begins October 1 and ends September 30. In listing the water year, only one date is shown; for example, 1952 stands for the water year October 1, 1951, to September 30, 1952.

A date followed by only a dash indicates that the station was continued in operation beyond September 30, 1983. A date followed by a semicolon indicates a break in the collection of records. Additional explanatory notes are given in the heading of each table.

COMPUTER RETRIEVAL OF DATA

Most of the data listed in this index are entered in the Survey's computer-storage system and can be retrieved in tabular form. Retrievals can be made for individual stations or for series of stations both by station number and in latitude-longitude sequence. Additional information related to streamflow, such as gage-height records, discharge measurements, and stage-discharge rating curves and tables, that has not been published or stored in the computer is available from the Alaska District office of USGS. Questions regarding costs, procedures for computer retrieval, or other information regarding the data listed in this index should be addressed to:
