

EXPLANATION MAP A

- All contacts are inferred except at profile crossings.
- Irregular surface caused by intraterrational deformation
 - Fracture; strike inferred, exclusive of lower-slope unit
 - Scarp, hatchures on down side
 - Fault, ball on down side; queried where doubtful; strike inferred; exclusive of lower slope units
 - Upslope (detachment) side of mass movement
 - Slide or slump toe
 - Rubble along profile
 - Approximate margin of eroded upper slope
 - Inner edge of shelf facet
 - Approximate updip margin of layered rise unit; hatchures indicate cuesta
 - Buried synform
 - Bench below which upper slope unit is exposed
 - Bench marks top (?) of rugged lower slope, inferred outcrop of lower slope unit
 - Trackline, Gilliss (G) 7905-03 (1979)
 - Cross-ticks indicate hour intervals (numbers keyed to seismic profiles). Large numbers indicate beginnings or ends of numbered lines.
 - Rubble fill

SCALE 1:250,000
