CONVERSION FACTORS AND RELATED INFORMATION

Most values in this report are given in inch-pound units. For readers who prefer using metric units, the conversion factors are shown to four significant figures.

	<u>Multiply</u>	<u>by</u>	<u>To obtain</u>
Acre		0.4047	Square hectometer hm^2
		0.004047	Square kilometer km^2
Foot		0.3048	Meter m
Gallon per minute		0.06309	Liter per second L/s
Micromhos per centimeter		1.000	Microsiemens per centimeter uS/cm
Mile		1.609	Kilometer km
Square mile		2.590	Square kilometer km^2

Chemical composition is given in milligrams per liter (mg/L) or micrograms per liter (ug/L). Milligrams per liter is a unit expressing the solute per unit volume (liter) of water. One thousand micrograms per liter is equivalent to 1 milligram per liter. For concentrations less than 7,000 milligrams per liter, the numerical value is about the same as for concentrations in parts per million.

Water temperature is given in degrees Celsius ($^{\circ}\text{C}$), which can be converted to degrees Fahrenheit ($^{\circ}\text{F}$) by the following equation:

$$^{\circ}\text{F} = 1.8 (^{\circ}\text{C}) + 32.$$

National Geodetic Vertical Datum of 1929 (NGVD of 1929): A geodetic datum derived from a general adjustment of the first-order level nets of both the United States and Canada, called NVGD of 1929, is referred to as sea level in this report.

SELECTED HYDROLOGIC DATA FROM WELLS IN THE EAST SHORE AREA
OF THE GREAT SALT LAKE, UTAH, 1985

By Gerald G. Plantz, Cynthia L. Appel, David W. Clark,
Patrick M. Lambert, and Robert L. Puryear

INTRODUCTION

This report contains hydrologic data for wells collected in the East Shore area of the Great Salt Lake, Utah. It includes water-quality data, discharge measurements, water levels, and drillers' logs. The East Shore area (plate 1) includes about 430 square miles, bounded by the Wasatch Range on the east and the Great Salt Lake on the west. The first section line north of the town of Willard is the northern boundary, whereas the Davis-Salt Lake County line is the southern boundary.

Most of the data in this report were collected from 1983 to 1985 by the U.S. Geological Survey in cooperation with the Utah Department of Natural Resources, Division of Water Rights. Some of the data were previously published by Smith (1961) or Bolke and Waddell (1972).

The purpose of this report is to provide ground-water data for use by officials managing water resources and the general public and to supplement an interpretive report for the area that will be published later. From tables 1-5 of this report, determinations can be made for the depth to water-bearing units, water levels in wells, well yields, or chemical quality of ground water at the sites shown on plate 1.

NUMBERING SYSTEM USED IN UTAH FOR WELLS

The system of numbering wells in Utah is based on the cadastral land-survey system of the U.S. Government. The number, in addition to designating the well, describes its position in the land net. By the land-survey system, the State is divided into four quadrants by the Salt Lake Base Line and Meridian, and these quadrants are designated by the uppercase letters A, B, C, and D, indicating the northeast, northwest, southwest, and southeast quadrants, respectively. Numbers designating the township and range (in that order) follow the quadrant letter, and all three are enclosed in parentheses. The number after the parentheses indicates the section, and it is followed by three letters indicating the quarter section, the quarter-quarter section, and the quarter-quarter-quarter section--generally 10 acres¹; the letters a, b, c, and d indicate, respectively, the northeast, northwest, southwest, and southeast quarters of each subdivision. In tables 1, 2, and 5, which are

¹Although the basic land unit, the section, is theoretically 1 square mile, many sections are irregular. Such sections are subdivided into 10-acre tracts, generally beginning at the southeast corner, and the surplus or shortage is taken up in the tracts along the north and west sides of the section.

direct computer printouts, uppercase letters are used to designate both the quadrant and the quarter section, quarter-quarter section, and the quarter-quarter-quarter section. The number after the letters is the serial number of the well within the 10-acre tract.

If a well cannot be located within a 10-acre tract, one or two location letters are used and the serial number is omitted. Thus, (B-6-2)12bad-1 designates the first well constructed or visited in the SE $\frac{1}{4}$ NE $\frac{1}{4}$ NW $\frac{1}{4}$ sec. 12, T. 6N., R.2W. The numbering system is illustrated in figure 1.

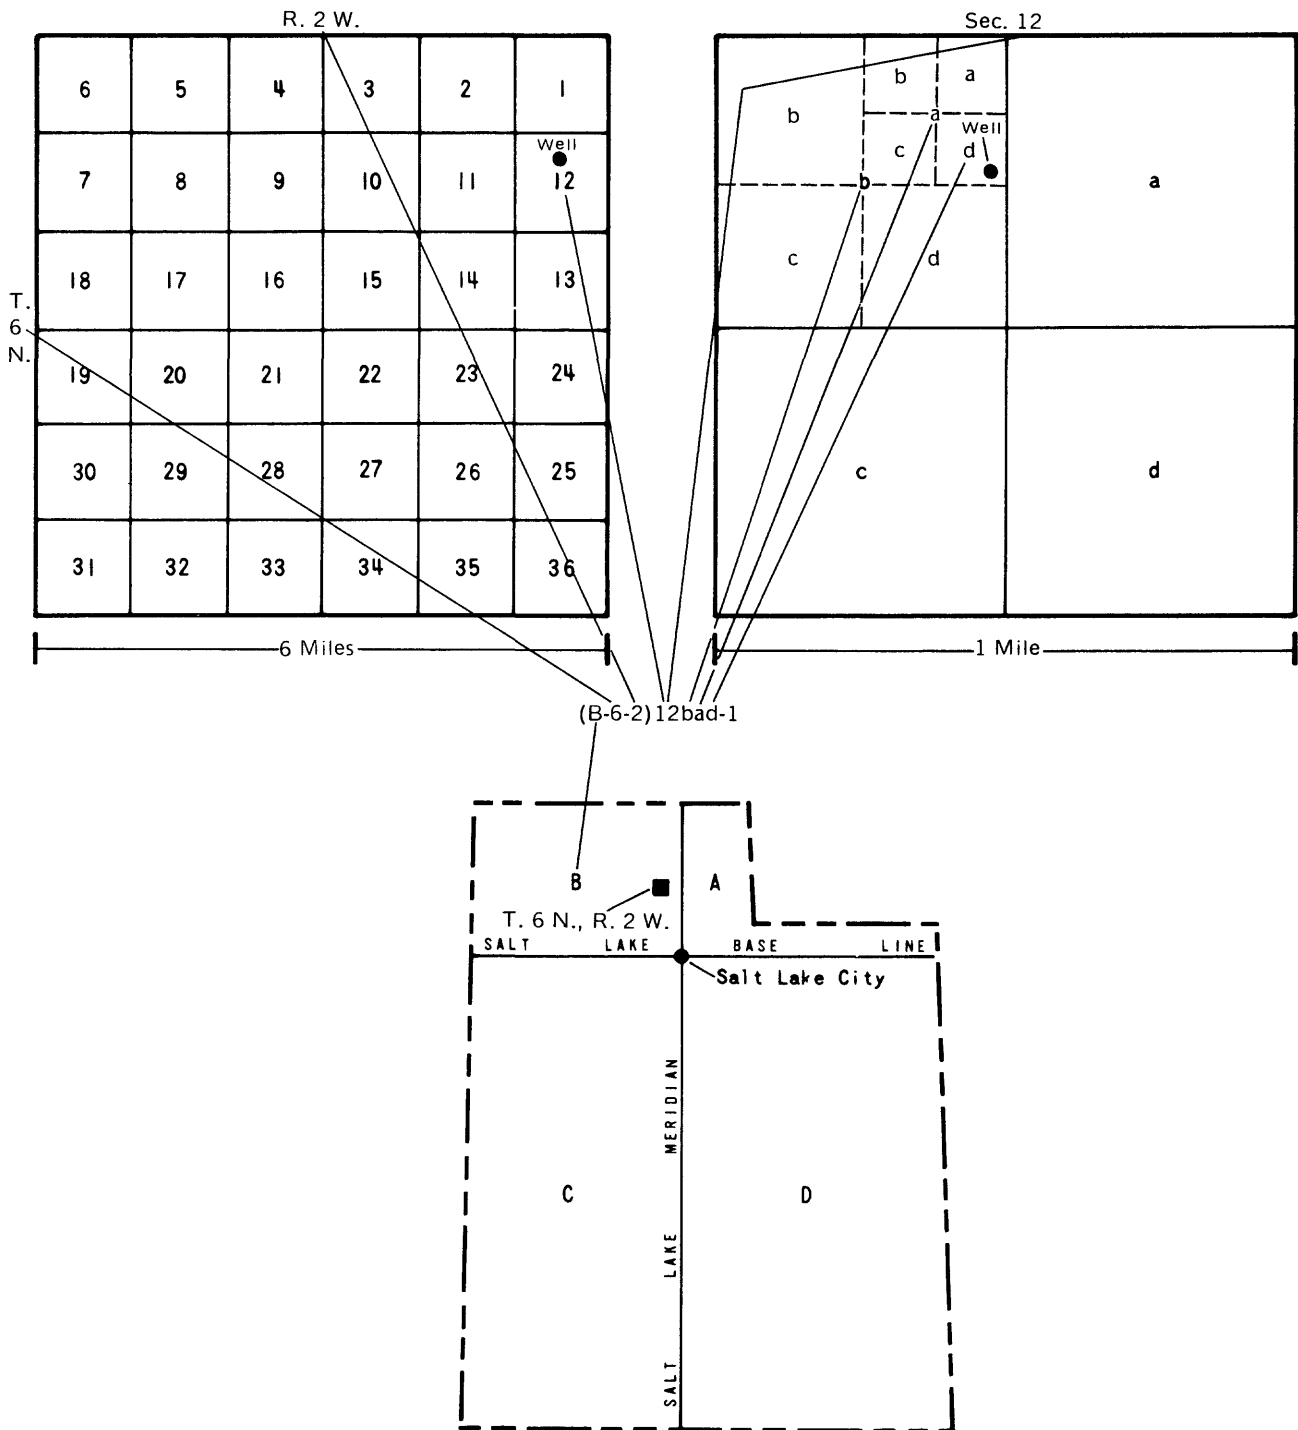

Figure 1.—Numbering system used in Utah for wells.

Table 1.--Records of

Location: See text for explanation of numbering system used in Utah for wells.

Owner or user: Refers to last known owner or user.

Use of water: H, domestic or household; I, irrigation; J, cooling; N, industrial; P, public supply; S, stock; U, unused.

Depth of well: Finished depth, drilled depth may be greater; B, drilled depth ends in bedrock.

Casing: Diameter: reported from driller's log or measured in field; Finish: O, open end; P, perforated; S, screened; X, open hole. questioned (?) if lower limit of perforated or screened interval is unknown.

Altitude of land surface: Surveyed altitudes given in feet and tenths; altitudes interpolated from U.S. Geological Survey

Water level: Measured distances to water given in feet and tenths or hundredths; reported and estimated distances given in feet.

Discharge: Rate: F, natural flow; P, pumped.

Water-quality parameters: Specific conductance given in microsiemens per centimeter at 25 degrees Celsius.

Other data available: C, chemical analyses (table 5); D, discharge measurements (table 3); L, driller's log (table 4); W, water

Table 2.--Water levels in selected wells

[Water levels are in feet above(+) or below(-) land surface. Measured levels are in feet and tenths or hundredths; reported levels are in feet. See text for explanation of numbering system used in Utah for wells.]

Altitude (ALT.) of land surface: Surveyed altitudes given in feet and tenths; altitudes interpolated from U.S. Geological Survey topographic maps given in feet.

Table 3.--Discharge of selected flowing wells

Location: See text for explanation of numbering system used in Utah for wells.

Depth: Finished depth of well, in feet; drilled depth may be greater.

Casing: Diameter: reported from driller's log or measured in field, in inches;

Finish: O, open end; P, perforated; S, screened; perforation or screen interval given in feet below land surface if known, and questioned (?) if lower limit of perforation or screen is unknown.

TABLE 4.--Drillers' logs of selected wells
[See text for explanation of numbering system used in Utah for wells. Altitude (Alt.) is land-surface altitude. Surveyed altitudes given in feet and tenths; altitudes interpolated from U.S. Geological Survey topographic maps given in feet.]

Thickness: Thickness of unit, in feet.

Depth: Depth to bottom of unit, in feet, below land surface. Total depth of log may be greater than the depth of well given in tables 1 and 3 because the drilled depth may have been greater than the depth of the completed well.
