

DEPARTMENT OF THE INTERIOR

U.S. GEOLOGICAL SURVEY

NEW INFORMATION RESOURCES OF THE U.S. GEOLOGICAL

SURVEY LIBRARY SYSTEM

NUMBER 8

DECEMBER 1986

Open-file Report 86-400-K

This report is preliminary and has not been reviewed for conformity with the U.S. Geological Survey editorial standards.

NEWS ITEMS

The following is an update of the item which appeared in the January 1986 issue of the New Information Resources ... (Number 86-400A).

The USGS Library System has adopted the Library of Congress (LC) system for cataloging and classification of the collections.

The USGS Library System methodology for cataloging and classification had been in effect since 1904, one year before the effective date for the LC classification system for scientific materials. However, a system of analysis must grow as a subject field expands and as concepts and terminology change. "Maintenance" of a system, as it is called, requires dedication of staff and other resources specifically to that task. The level of effort required is described by, Oscar Handlin, Carl M. Leob University Professor at Harvard University. In writing about "the prodigious effort expended year after year in defining and refining classification schemes," he says, "But only the professionally aware know what enormous care goes into the decision that achieves uniformity not only within a single library but nationally and internationally....Valiant committees at the Library of Congress, laboring at the task in cooperation with their opposite numbers in other national libraries periodically review the accepted headings..."¹

The USGS Library System had not for some time had resources adequate for an independent method of analysis for materials. For example, subject headings under the USGS method had gradually converged with items of LC, so that only 22 headings unique to the USGS remained. Conversion to the LC system allows the USGS analysis staff to make greater use of records from the Online Computer Library Center (OCLC), a national bibliographic database, as well as make USGS records more useful to other OCLC participants, including the vast majority of earth science libraries throughout the United States.

USGS analysis staff are now working cooperatively with LC staff in developing a terminology for the national system of analysis, thus extending the Survey expertise to the earth science community far beyond what we have been able to do alone. Use of the LC methodology will also facilitate the USGS Library System to develop cooperative agreements for shared collection-management with other libraries, since the national system uses the LC framework.

In addition, the USGS Library System will not have to pay for computer system modification to accommodate the non-standard format of the Survey's unique classification scheme as we did with the initial version of the LS2000 automated system.

¹Oscar Handlin, "Libraries and Learning." The American Scholar 56 (Spring 1987), 205-218.

The economic considerations of maintenance, compatibility for resource sharing, and computer system development have led the vast majority of academic and specialized libraries in the U.S. to adopt the LC system. Examples of major Federal scientific libraries like ourselves which have done so, with dates of conversion from prior unique systems, are:

Smithsonian Institution Libraries, 1965

National Agricultural Library, 1966-67

National Oceanic and Atmospheric Administration Library, 1972

The major example of a sustained unique system for analysis is that of the National Library of Medicine (NLM). NLM has been forced to maintain a separate staff for developing terminology. The NLM classification uses a "vacant" LC class number and is similar in format to that of LC.

The USGS analysis system had been adopted by only two other domestic libraries since 1904, as far as we know, and those libraries are also beginning to use the LC method.

In implementing the LC methodology, the USGS Library plans to maintain and improve the physical arrangement of the collection (the primary function of the class number) for easy access by the user.

- 0 Materials designated for reference will continue to be shelved as a single collection, as will maps.
- 0 Primary division of shelving based on size will continue because we would otherwise lose too much space by sequential arrangement. However, LC-classed materials will be filed in one place, near the USGS system quarto section.
- 0 USGS bulletins, circulars, open file reports, professional papers, and water resource investigations (WRI) will be together by series, and the series will be sequential. The USGS publications will also be close to other geological materials for improved browsing.
- 0 Publications of other Geological Surveys will continue to be shelved together.
- 0 Publications of geological meetings, congresses, and conventions will continue to be arranged so that these publications, including guidebooks will be collected together.
- 0 Geophysics serials will be brought into the geological material rather than being classed with general science.
- 0 Shifting the collection on the shelves to make room for the LC-classed material is being done as part of routine annual shifting. It is presently about half complete for books and underway for maps.
- 0 Orientation for users will be held as time nears for implementation.

The change-over began with monographs bearing a 1986 publication date. After thorough evaluations, categories of publications will be selected for retrospective conversion, the extent and rate depending upon Library funds available.

Due to upgrades of the LS2000 computer system software to Versions C and D, the assigned LC call numbers have not yet been implemented on the display; hence materials have not been shelved by LC call number. This is expected to begin in July, 1987, with retrospective processing of earlier 1987 material and of 1986 material as funds permit.

The main difference to users will be in shelf browsing a broad subject (class). If retrospective conversion has not been done, the user will simply scan two sections under old and new class numbers, respectively. Even in the absence of retrospective conversion, this problem lessens year-by-year, as the older literature, although always important, is less used; this is the experience of other scientific libraries which have converted to the LC system. The situation is similar to that of converting from a manual to the on-line catalog of the LS2000. In both cases, a two-part system results, since no libraries can afford instantaneous and total retrospective conversion.

Moreover, the separation factor in browsing shelves is ameliorated by the vastly improved browsing of the bibliographical records, through various access points, effected by the LS/2000 on-line catalog.

In FY 1985, the last fiscal year in which the USGS unique system was used throughout the year, we cataloged 8,563 titles, with an end-of-year staff of 17.8 FTE. In FY 1987, we expect (based on a straight-line projection from the first 7 months) to catalog 11,708 titles, with a smaller end-of-year staff of 15 FTE's. In addition to managing incoming material, we have continued the project begun in FY 1986 of reviewing, for retention and cataloging, a long-standing backlog of materials in Reston, Herndon, and the regions. We also accepted the invitation of WRD to add to the collections those materials analyzed by WRD for Selected Water Resources Abstracts which we did not already have. We have increased the time spent on upgrading the computer data base. These steps have all been taken in order to increase the size of the collection and to improve access for the user community.

Libraries in the Geological Survey Library System are located in the Eastern, Central, and Western Regions. Personnel whose duty station is other than Reston, Denver, Menlo Park or Flagstaff, may borrow items by completing an Accessions List Loan Request form and mailing it to the Survey Library in their Region if the item is available there or to the nearest Survey Library holding the item if it is not. Personnel whose duty station is Reston, Denver, Menlo Park or Flagstaff should continue to request items as they are accustomed to doing.

If a library is unable to fill a request immediately because its copy of the item is charged out or otherwise unavailable for loan, the request will be forwarded to any Survey Library which may be able to supply a copy. If no copy is available for immediate loan, the requester's name will be placed on a waiting list and the publication dispatched as soon as it becomes available. Publications with a waiting list are loaned for two weeks only; those without are loaned for thirty days. If there is no waiting list, the loan period may be extended by contacting the lending library prior to the expiration of the loan period and requesting a renewal.

In filling out the Loan Request form, it is essential that requesters include their (1) Division/Office/Branch affiliation, (2) complete mailing address, and (3) phone numbers, both commercial and FTS. Typing or printing such information will help avoid unnecessary delays in processing requests. Loan Request forms will be found at the end of each List; they should be duplicated if additional copies are required. A separate form should be used for each item requested.

Questions regarding entries in the List or the information to be supplied on the Loan Request form should be referred to the Library located in the same Region as the requester's duty station.

<u>Eastern Region</u>	<u>Central Region</u>	<u>Western Region</u>
Reston Library (703) 648-4302 4303	Denver Library (303) 236-1000	Menlo Park Library (415) 323-8111, ext. 2207
FTS 959-4302 4303	FTS 776-1000	FTS 467-2207
		Flagstaff Library (602) 527-7008

14 JUL 83 EJP

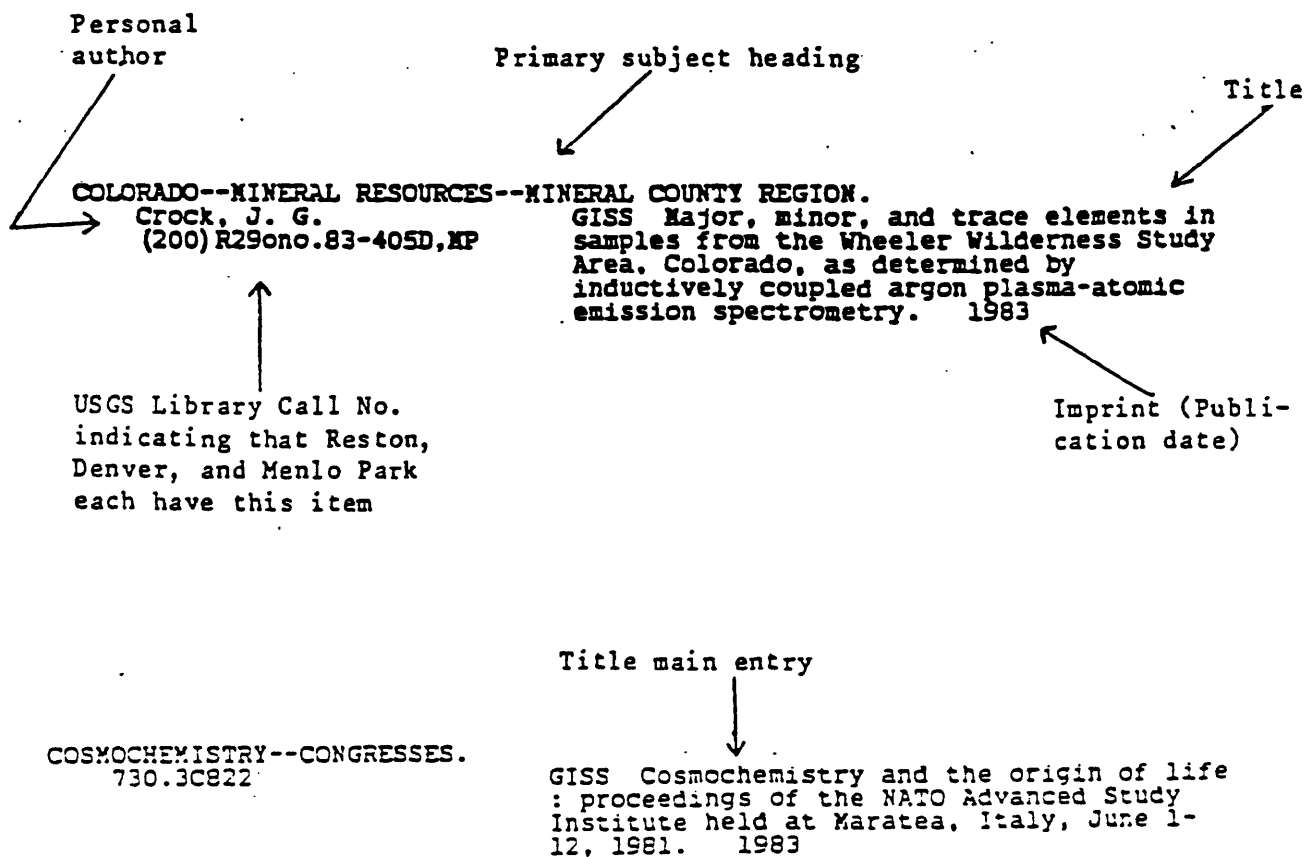

GISSat SEE NEXT CARD

DI-GS 14 JUL 83 EJP

GISSat

The above is a photocopy of a main entry card which is representative of the format arrangement appearing on cards filed in the Reston, Denver, Menlo Park and Flagstaff Library catalogs.

Appropriate information is selected and reformatted to produce subject-arranged entries similar to the following.

Additional explanation beyond that provided by the preceding examples seems appropriate.

Each entry consists of the following components which always appear in the order given: (1) Principal subject heading, always capitalized; (2) Main entry, which may be a personal author, corporate author, or title; (3) Title (if the main entry is either a personal or corporate author); (4) Imprint; (5) USGS call no., always located in the lower left and the last component in each entry.

The call number on catalog cards normally consists of two or more lines of a combination of letters and numbers, arranged in the following manner:

G(253)
F46
v.37
no.4
D,MP

In the Accessions List the same number appears in a straight line. There are no spaces to show where the call no. lines are broken on the catalog cards: G(253)F46v.37no.4D,MP

Call numbers prefixed with "M" indicate item is part of the map collection.

Call numbers prefixed with "R" indicate item is part of the Library's Reference collection. These items normally do not circulate.

Capital letter suffixes denoting which libraries (D = Denver, MP = Menlo Park, and F = Flagstaff), other than Reston, hold a particular item, follow the call no. and are set off from it by a space. Please note that no letter suffix is employed for Reston, which should be understood to hold the item unless otherwise indicated. In the call no. above, the Reston, Denver, and Menlo Park libraries each have this item.

If a library, other than Reston, is the sole holder of an item, the suffix statement will reflect that fact; for example: F only.

Occasionally an item will not be assigned a call no., receiving instead an alpha abbreviation, such as PAM = pamphlet or MICRO = microform. In such entries, that designation occupies the space normally set aside for the call no. When completing the Loan Request form, alpha abbreviations should be recorded on the call no. line.
