These maps are preliminary and have not been reviewed for conformity with U.S. Geological Survey editorial standards and nomenclature. Boundaries shown on this map should not be regarded as having official significance.

Epicenter locations were calculated using the Jeffreys-Bullen Travel Time Tables. The hypocentral data displayed on these maps were calculated using the observations which were reported by the U.S. Geological Survey, National Geographic Institute of Spain, the International Seismological Centre, Newbury, United Kingdom, the Lamont-Doherty Geological Observatory of Columbia University, New York, the California Institute of Technology and the Seismological Laboratory of the University of California, Berkeley, California.

We are grateful to P. R. Vogt, Naval Research Laboratory, Washington, D. C., and F. Marchant, Naval Oceanographic Office, Bay St. Louis, Mississippi, for providing the bathymetric data (NAVOCEANO) used in compiling one of the figures. We would also like to acknowledge the assistance of J. A. Michael in making this task possible.
