INTRODUCTION

New Information Resources is a list of new earth science materials recently acquired and cataloged by the U.S. Geological Survey. It is based on the accessions list acquired through our participation in the national OCLC on-line cataloging system. Due to technical reasons two separate lists are created. The first is an alphabetical list by main entry. These entries were assigned unique USGS subject headings that do not print in the OCLC system. They are therefore arranged alphabetically by main entry. The second list is by subject heading. It is subarranged by main entry. Each entry usually consists of four elements: subject, author/title, imprint, and call number.

EXAMPLE:

Subject: EARTHQUAKES--TENNESSEE--COVINGTON.
Author/title: Metzger, Ann Garrecht. Covington, TN earthquake, February, 1981.
Imprint: Memphis : Tennessee Earthquake Information Center, Memphis State University, 1981.
Call number: S(239) Sp32 no. 5

Call numbers prefixed with "M" indicate an item is part of the map collection:

M(410)4 B148s

Call numbers ending with D only, MP only, or F only, indicate that one of these regional libraries, Denver, Menlo Park, or Flagstaff, is the sole holder of an item:

210(252) H178m D only

Occasionally an item will not be assigned a call number, receiving instead an alpha abbreviation, such as PAM, i.e., a pamphlet, or qPAM indicating an oversize pamphlet.
