# **COMPILATION OF WATER-QUALITY DATA FOR THE NORTH COAST LIMESTONE AQUIFERS, PUERTO RICO, 1951 TO 1987**

**By**

**Angel Román-Más and Orlando Ramos-Ginés**

## **ABSTRACT**

Historical water-quality data, from 1951 to 1987, for the north coast limestone aquifers, Puerto Rico, was compiled as part of the Caribbean Islands Aquifers-Regional Aquifer System Analysis (CIA-RASA). The data include physical parameters such as temperature, specific conductance and pH as well as chemical analysis for common ions, trace metals, and nutrients. Location maps and identification tables by quadrangles are also included.

## **INTRODUCTION**

The limestones located along the north coast of Puerto Rico contain the most productive aquifers in the island. These aquifers underlie an area of about 600 square miles (mi<sup>2</sup>), and extend from the Rincón quadrangle on the west coast eastward to Río Grande quadrangle (as shown on the index map). Two important aquifers occur within the north coast limestone area: (1) a water-table aquifer occurring within the Aymamón and Aguada limestones, the alluvial deposits, and the outcrop areas of the Lares Limestone, the Mucarabones Sand, and the Cibao Formation (including all its members); and (2) a deep artesian aquifer system occurring within various members of the Cibao Formation and the Lares Limestone.

The Caribbean Islands - Regional Aquifers System Analysis (CIA-RASA) is a comprehensive appraisal of the principal aquifers in Puerto Rico and the U.S. Virgin Islands. One of the main components of this appraisal is a complete geochemical evaluation of the water quality of these aquifers. This report is a compilation of the historical water-quality data for the limestone aquifers. Later, the data will be used in the preparation of map reports that present the areal and vertical distribution of selected constituents and hydrochemicals facies within the aquifers. A description of the principal geochemical processes that produce the observed ground-water chemistry within the north coast limestone aquifers has been published (Román-Más, A., and Lee, R.W., 1987). Finally, a geochemical model of the aquifers is planned.

## EXPLANATION OF CHEMICAL ANALYSES AND WELL-COMPLETION DATA

About 700 water-quality analyses from 320 wells and springs located along the north coast limestone aquifers were compiled from data residing in files of the U.S. Geological Survey, the Puerto Rico Aqueduct and Sewer Authority, and the Puerto Rico Department of Natural Resources (tables 1 to 22). The analyses include common ions, trace metals, and nutrients. The water-quality data, location maps, and site identification tables are presented by quadrangles (figures 1 to 22). Location and use of the selected wells and springs were adapted from the U.S. Geological Survey water-well inventory (Héctor Colón-Ramos, U.S. Geological Survey, written communication, 1986).

A site number; name; and identification number, which consists of the latitude, the longitude, and a sequence number, were assigned to each well and spring for its identification. Well completion data such as well depth and screened interval were included along with the water-quality data when available. The geologic unit or units tapped by the individual well or spring was defined from 1:20,000 scale geologic maps and geologic descriptions of the north coast limestone area by Monroe (1980) as well as from the hydrogeologic descriptions by Giusti (1976) and Torres-González (1984 and 1985). Recent analyses tend to be more accurate than earlier analyses because of improved analytical methods. The laboratory that performed each of the analyses has been identified.

### EXPLANATION

- WELL USED FOR DOMESTIC-WATER SUPPLY (PRASA Property)
- ⊙ WELL USED FOR INDUSTRIAL-WATER SUPPLY
- ⊗ WELL USED FOR IRRIGATION-WATER SUPPLY
- ⊘ ABANDONED WELL
- SPRING

Note: Site numbers are identified in Table 2A.

## EXPLANATION

- <sup>3</sup> WELL USED FOR DOMESTIC-WATER SUPPLY (PRASA Property)
- <sup>4</sup> PRIVATE-WATER SUPPLY WELL
- ∅<sup>2</sup> ABANDONED WELL
- <sup>1</sup> SPRING
- BOUNDARY OF THE NORTH COAST LIMESTONE AREA

Note: Site numbers are identified in Table 20A.
