IDENTIFICATION CODES FOR ORGANIZATIONS
LISTED IN COMPUTERIZED DATA SYSTEMS
OF THE U.S. GEOLOGICAL SURVEY

By

Cassandra D. Blackwell

ABSTRACT

This report contains codes for the unique identification of public and private organizations listed in computerized data systems. These codes are used by the U.S. Geological Survey's National Water Data Exchange (NAWDEX), National Water Data Storage and Retrieval System (WATSTORE), National Cartographic Information Center (NCIC), and Office of Water Data Coordination (OWDC). The format structure of the codes is discussed and instructions are given for requesting new codes.

INTRODUCTION

In collaboration with the U.S. Geological Survey's Office of Water Data Coordination (OWDC), the National Water Data Exchange (NAWDEX) gathers information on Federal, State, and private organizations that are sources of water data. NAWDEX also indexes the water data available from many of these organizations. In addition, the U.S. Geological Survey's National Water Data Storage and Retrieval System (WATSTORE) provides facilities for the storage in its files of water data collected by other organizations. These data are also indexed by NAWDEX. A standard coding system is used to uniquely identify each organization participating in these programs.

The National Cartographic Information Center (NCIC) of the U.S. Geological Survey gathers information on the availability and location of cartographic data available from a large number of Federal, State, and private organizations. The enclosed identification codes are also used by NCIC for the identification of non-Federal organizations participating in its program. NCIC uses codes established by the Office of Management and Budget for the identification of Federal organizations.

The Office of Water Data Coordination (OWDC) is responsible for the coordination of water-data acquisition activities of all Federal agencies, as specified by Circular A-67 issued by the Office of Management and Budget in August 1964. Many non-Federal organizations also participate in the coordination activities. OWDC uses the enclosed codes for the identification of all organizations participating in its activities, including the Catalog of Information on Water Data.

STRUCTURE OF THE IDENTIFICATION CODE

The identification code may contain a minimum of three characters and a maximum of five characters. Codes have been assigned in the following formats.

- A. USaaa - This format is used to identify Federal organizations. The first two characters are always the letters "US". The "aaa" is replaced by one to three characters which provide a meaningful abbreviation of the organization name. For example, USGS is the identification code for the U.S. Geological Survey,
- B. aaaaa - This format is used to identify organizations having jurisdiction at the international, national, or multi-State level. This includes organizations administering Federal-State compacts, State-to-State compacts and private organizations. From three to five characters are used which provide a meaningful abbreviation of the organization name. This format requires alphabetic characters only and does not allow the characters "US" in the first two positions of the code or the character "X" in the third position of the code. For example, SRBC is the identification code for the Susquehanna River Basin Commission.
- C. ss000 - This format is used to identify non-Federal organizations having jurisdiction within a single State boundary. This includes State, county, municipal, private, university, and other local organizations. In this format, the "ss" is replaced by the alphabetic Federal standard State code identifying the State or outlying area of the United States in which the organization is located. Alphabetic codes in Federal Information Processing Standards Publication (FIPS) Number 5-1 entitled "States and Outlying Areas of the United States" dated June 15, 1970, are used in these positions. The characters "000" are replaced by either a numeric sequence number or a combination of alphabetic and numeric characters which are arbitrarily assigned to uniquely identify each organization. The letter "X" cannot be used in the third character position of the code, and the fifth position of the code must always contain a numeric character. For example, CA001, is the identification code for the California Department of Water Resources.
- D. ccX00 - This format is used to identify foreign organizations. The characters "cc" are replaced by the FIPS alphabetic standard code for the country in which the organization is located.

The code is taken from the Federal Information Processing Standard Publication Number 10-2 entitled "Countries, Dependencies, and Areas of Special Sovereignty" dated November 1976. The third position of this code is always the letter "X". The characters "00" are replaced by either a numeric sequence number, a combination of alphabetic characters which are arbitrarily assigned to identify each organization. For example, CAX01 is the organization code for the Water Quality Branch of the Canadian Inland Waters Lands.

CODE ASSIGNMENTS

All organizational codes used by NAWDEX, WATSTORE, and OWDC, and non-Federal organizational codes used by NCIC, are assigned by the NAWDEX Program Office which is located at the Geological Survey's National Center in Reston Virginia. If additional codes are needed, they may be requested using the form shown in figure 1. The information required in the upper part of the form is mandatory and pertains to the organization for which the code is requested. All items in this upper part of the form must be completed. The center part of the form is completed if the organizational code is requested by an individual whose address is different from that given on the upper part of the form. The lower part of the form is for use by the NAWDEX Program Office only. The enclosed form may be duplicated or small quantities of the form may be requested from the NAWDEX Program Office.

Information on organizational codes or requests for organizational code assignments should be directed to:
