Introduction

This report presents some of the results of a study done under contract to the U.S. Geological Survey (USGS) by A.A. Nowroozi of Old Dominion University at Norfolk, Virginia. The work was undertaken to support the objectives of the Early Mesozoic Basins Project under the auspices of the USGS Strategic and Critical Minerals Program and the Geologic Framework and Synthesis Program.

During 1984-1985, 830 new gravity stations were acquired in profile form along local Virginia roads across the Richmond early Mesozoic basin near Richmond, Virginia (Figure 1). Thirteen profiles were completed in this study, of which four cross the width of the basin (Virginia routes 708, 602, 604, 711, Figure 2). The average spacing between stations is about 100 m. These profiles were intended to complement previous gravity surveys in the region of the Richmond basin completed by the Virginia Division of Mineral Resources (VDMR) (Johnson, 1973, 1975; Johnson and others, 1985). The new profiles reported here are along many of the roads crossing the Richmond basin not covered by the VDMR surveys in order to permit modelling of various structural features of the basin. This report presents the principal facts for these measurements.

Data collection

Gravity observations were made using LaCoste-Romberg gravity meter G-289. All gravity stations were referenced to a base station at Chesterfield, Virginia (see Appendix A), one of a net of 58 base stations in Virginia established by Johnson and Ziegler (1972). The gravity survey in this study was accomplished by loops which were started and closed daily with repeat observations at the Chesterfield base. The stations of the Virginia base net, including the base at Chesterfield, were tied to base stations WASHINGTON R at Dulles International airport near Washington, DC and RALEIGH K at Raleigh-Durham airport in North Carolina. These ties were carried out prior to the establishment of the International Gravity Standardization Net (IGSN71) and consequently the observed gravity values for the Virginia net (Johnson and Ziegler, 1972) were based upon the datum of the U.S. National Gravity Base Net (USNGBN). The difference between UDNGBN (Johnson and Ziegler, 1972) and IGSN71 (Morelli, 1971) datums at base WASHINGTON R is -13.71 mGals (Table 1). Base CHESTERFIELD was therefore adjusted downward by 13.71 mGals to bring it into conformity with IGSN71.

Table 1 Observed gravity (mGals) at reference stations

BASE ----	USNGBN -----	IGSN71 -----	Difference -----
WASHINGTON R	980092.16 (1)	980078.45 (2)	13.71
CHESTERFIELD	979929.27 (1)	979915.56	13.71

(1) Johnson and Ziegler (1972)

(2) Morelli (1971)

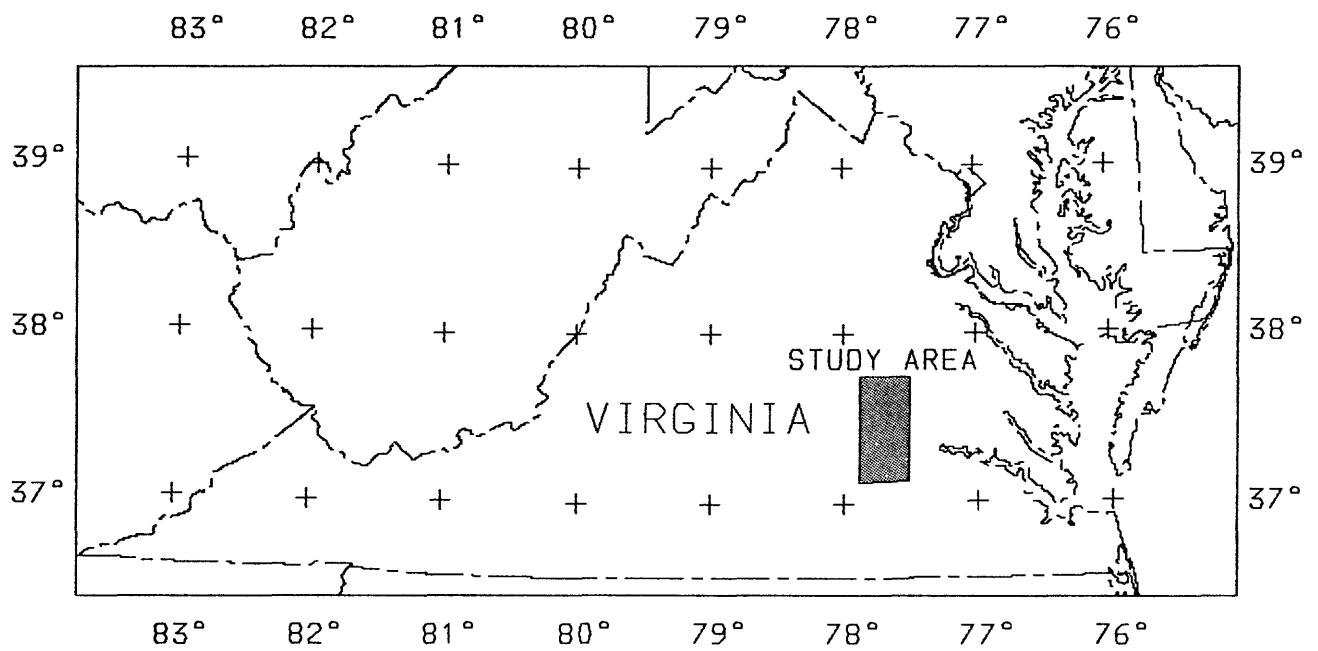

Figure 1 Index map showing the location of the study area.

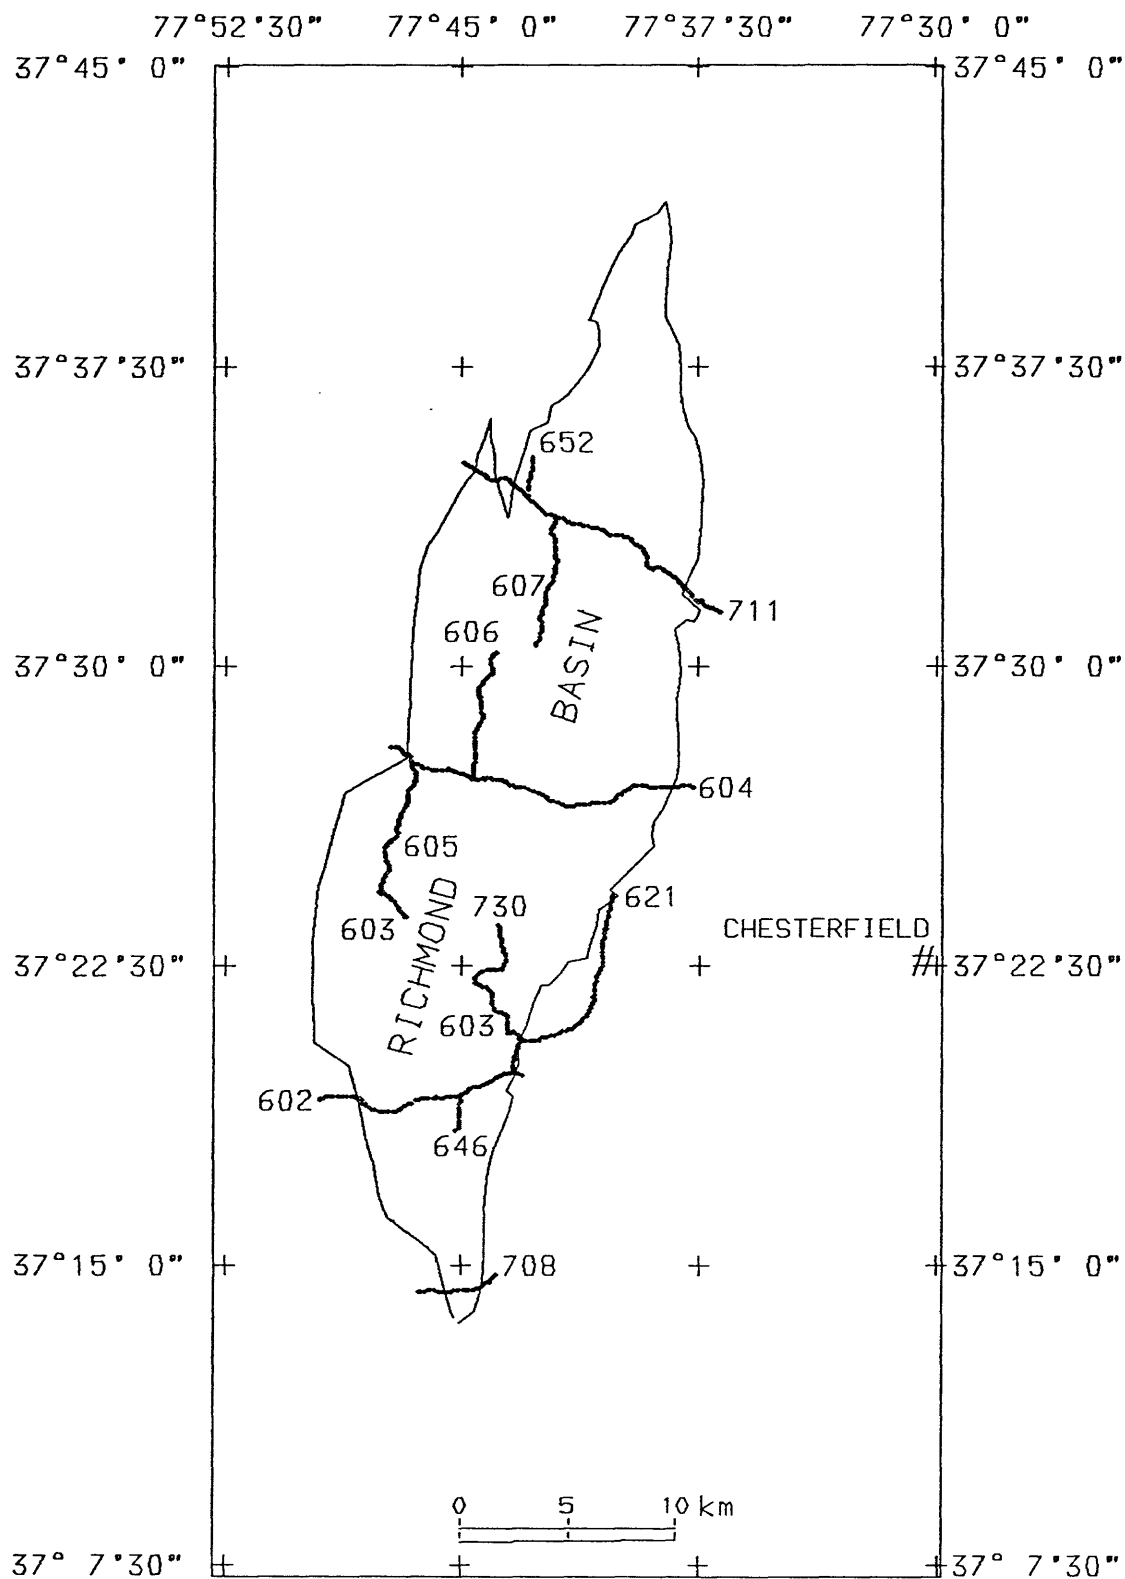

Figure 2 Index map showing the locations of the gravity profiles acquired in this study (heavy lines). The profiles are numbered with the state route numbers. The outline of the Richmond basin was digitized from Johnson and others (1985).

Elevation and Location Control

The elevation of the stations was determined by transit and leveling rod, in most cases beginning and ending on a National Geodetic Survey or USGS benchmark with established vertical control. The uncertainty of the determined elevations is estimated to be ± 0.25 feet based on closure errors. At a density of 2.67 g/cc, these elevation uncertainties translate to uncertainties in the Bouguer anomaly value of about ± 0.02 mGals.

Station positions were plotted on USGS 7.5 minute topographic maps with an estimated accuracy of ± 25 m. Station latitudes and longitudes were then scaled from the topographic maps.

Data Reduction

Program GRAVAS on the computer system at Old Dominion University was used to reduce gravity meter-readings to observed-gravity values by calculating and correcting for earth-tide and linear meter-drift. Computer programs existing on the USGS Digital Equipment Corporation VAX 11/780 computer system at Reston, Virginia were used to reduce the data to Bouguer anomalies and to obtain a listing of the principal facts. Terrain corrections were computed using program BOUGUER by R.H. Godson (USGS unpub. program, 1978), which corrects for the gravity effects of terrain at each station out to a radius 166.7 km using the method of Plouff (1977). Godson's program also calculates earth-curvature corrections and complete (terrain-corrected) Bouguer gravity anomaly values. These computed terrain corrections use mean-elevation data digitized on a 30-second grid for corrections from 0.895 to 5 km, 1-minute terrain data for corrections from 5 to 21 km, and 3-minute terrain data for corrections from 21 to 166.7 km. No correction was made for the region from the station out to a radius of 0.895 km because this is approximately the limit of resolution of the digital terrain values at this latitude. As the terrain is generally flat in the region, little error should be introduced by this omission. A density of 2.67 g/cc was used to calculate terrain corrections, giving the corrections and gravity anomaly values listed in Appendix B. The theoretical gravity value was calculated using the 1967 formula of the Geodetic Reference System (International Association of Geodesy, 1967). Mathematical equations are given in Cordell and others (1982). Errors in the estimation of terrain corrections give rise to the greatest uncertainty in Bouguer values. Computer-generated terrain corrections in mountainous areas are generally accurate to within 1 mgal.

Acknowledgements

We thank Stanley S. Johnson (VDMR) for the use of program GRAVAS and for information regarding VDMR work in the study area.

APPENDIX A: DESCRIPTION OF GRAVITY BASE

Base name: CHESTERFIELD
 Location: Chesterfield, Chesterfield County, Virginia
 Observed gravity (IGSN71): 979915.56 mGals

D M S

Latitude: 37 22 34 N Elevation: 209.652 ft
 Longitude: 77 30 25 W Date established: 4/5/71

Description (from Johnson and Ziegler, 1972):

At "Chesterfield County Courthouse, about 0.1 mile east along State Highway 10 from its intersection with State Road 655 in Chesterfield, about 80 feet east of the SE corner of the courthouse, over BM in concrete base of the Soldiers Monument, about 5 feet south of the south face." Bench mark (BM) is designated R 245 1942.

APPENDIX B: PRINCIPAL FACTS OF GRAVITY STATIONSExplanation of Headings:

STATION ID Gravity station identification number. The first three digits give the Virginia highway route number.

LOCATIONS:

LATITUDE North latitude in degrees, decimal minutes
 LONGITUDE West longitude in degrees, decimal minutes
 ELEV Station elevation in feet

OBSERVED GRAVITY Observed gravity in milligals

CORRECTIONS:

TERRAIN Terrain correction from 0.895 to 166.7 km radius, in milligals
 CURV Curvature correction in milligals

ANOMALIES:

FREE AIR Free-air anomaly in milligals
 COMPLETE BOUGUER Complete Bouguer anomaly in milligals for density 2.67 gm/cc.
