CONVERSION FACTORS

The following conversions are included for the convenience of those who prefer to use International System (SI) units rather than inch-pound units.

<u>Multiply inch-pound unit</u>	<u>By</u>	<u>To obtain SI unit</u>
acre	4,047	square meter
foot (ft)	0.3048	meter
mile (mi)	1.609	kilometer

HYDROGRAPHS OF WATER LEVELS IN OBSERVATION WELLS IN IDAHO, 1982-88

By Michael L. Jones and Annette M. Tungate

ABSTRACT

Hydrographs of water levels in 515 observation wells in the statewide monitoring network for the period 1982-88 are compiled for convenient use. The monitoring network is operated by the U.S. Geological Survey in cooperation with the Idaho Department of Water Resources, U.S. Bureau of Reclamation, and other Federal and State agencies.

INTRODUCTION

Between 1982 and 1988, continuous-recorder or periodic measurements of water levels were made in 515 observation wells in the statewide monitoring network. Periodic measurements were made monthly, bimonthly, quarterly, semiannually, or annually. The monitoring network is operated by the U.S. Geological Survey in cooperation with the Idaho Department of Water Resources, U.S. Bureau of Reclamation, and other Federal and State agencies. The well-numbering system used for locating the wells is depicted diagrammatically in figure 1; locations of wells are shown in figures 2-8. The purpose of this report is to present a compilation of the hydrographs for convenient use.

Solid lines on the hydrographs indicate continuous-recorder monthly, or bimonthly measurements; lines with solid circles indicate quarterly, semiannual, or annual measurements. Some measurement points are labeled with letters to indicate P, pumping; R, recently pumped; or S, nearby pumping. Hydrographs are based on calendar years beginning October 1, 1982, and ending September 30, 1988. All well depths shown on hydrographs are in feet.

ACKNOWLEDGMENTS

The authors wish to express their appreciation to Garth D. Newton, U.S. Geological Survey, for his considerable assistance with data manipulation computer programs for this report.

WELL-NUMBERING SYSTEM

The well-numbering system (fig. 1) used by the U.S. Geological Survey in Idaho indicates the location of wells within the official rectangular subdivision of the public lands, with reference to the Boise base line and Meridian. The first two segments of the number designate the township (north or south) and range (east or west). The third segment gives the section number; followed by three letters, which indicate the $\frac{1}{4}$ section (160-acre tract), $\frac{1}{4}-\frac{1}{4}$ section (40-acre tract), $\frac{1}{4}-\frac{1}{4}-\frac{1}{4}$ section (10-acre tract); and serial number of the well within the tract, respectively. Quarter sections are lettered A, B, C, and D in counterclockwise order from the northeast quarter of each section. Within quarter sections, 40-acre and 10-acre tracts are lettered in the same manner. Well 08S 24E 31DAC1 is in the SW $\frac{1}{4}$ NE $\frac{1}{4}$ SE $\frac{1}{4}$ sec. 31, T. 8 S., R. 24 E., and was the first well inventoried in that tract.
