

U.S DEPARTMENT OF THE INTERIOR

U.S GEOLOGICAL SURVEY

METALLIC ORE DEPOSITS, MINERAL DEPOSITS AND PROSPECTS
OF THE I, II, III, IV, AND V REGIONS, NORTHERN CHILE

compiled by

William C. Williams

Open-File Report

OF 92-17

This report is preliminary and has not been reviewed for conformity with U.S. Geological Survey editorial standards or with the North American Stratigraphic Code. Any use of trade, firm, or product names is for descriptive purposes only and does not imply endorsement by the U. S. Government.

ACKNOWLEDGMENTS

This study was supported by the U. S. Geological Survey through a three-semester research assistantship and contract work. The assistantships were arranged by Greg McKelvey and Dr. Norman Page as a complement to my dissertation work in northern Chile under the auspices of Dr. John Guilbert at the University of Arizona.

Access to the data at the library of the Servicio Nacional de Geologia y Minería was accommodated by Juan Carlos Parra, Victor Maksaev, and the library staff. Data entry and use of the Mineral Resource Data System computer facilities was greatly facilitated by Karen Bolm whose patience and unselfish help is appreciated. Technical support for the computer system was provided by Paul Schruben from the U. S. Geological Survey office in Reston, Virginia. The guidance and patience of Norman Page helped to complete this document in a timely fashion. My thanks to all for their efforts in helping me to complete this project.

INTRODUCTION

This report provides a list of metallic ore deposits, mineral occurrences, and some prospects in the I, II, III, IV, and V Regions of Chile (Figure 1). Over 3000 sites were compiled from published and unpublished literature in Spanish and English. The purpose of the compilation was to provide a data base in English to be used for access to basic geological information of these sites; due to the large number of entries, the data are presented in tables divided into each region and sorted by commodity. Example of a complete record is on page 11.

All data were entered into the U. S. Geological Survey's Mineral Resource Data System (MRDS) at the Minerals Information Office in Tucson, Arizona. Detailed records can be acquired through Karen Bolm, 602-670-5544, at the above office. Moreover, the data can be acquired in a variety of formats, including computer diskettes, and inquiries should be directed to Karen Bolm.

This data base is a translation and update of the following unedited Chilean inventories which can be accessed at the Servicio Nacional de Geología y Minería in Santiago:

- 1) Pacci, D. y Caseras, R., 1980, Inventario de yacimientos metalicos y no-metalicos, primera region, Tarapaca: IIG, Santiago, unpaginated.
- 2) Boric, R., Diaz, F. y Maksaev, V. 1984, Complemento mapa metalogenico, II Region: Gerencia de Desarrollo, Santiago, unpaginated.
- 3) Diaz, F., et al., 1980, Mapa metalogenico pronostico de la III Region: Corporacion de Fomento de la Produccion: Santiago, unpaginated.
- 4) SERPLAC, 1981, Estudio del sector minero de la IV Region: Santiago, unpaginated.
- 5) SERPLAC, 1981, Estudio del sector minero de la V Region: Santiago, unpaginated.

Figure 1. Location of the five regions covered in this report.

Important published documents which include listings and general descriptions of sites include:

- 1) Boric, R., Diaz, F., y Maksaev, V., 1990, Geologia y Yacimientos Metaliferos de la Region de Antofagasta: Servicio Nacional de Geologia y Minería, Boletín No. 40, 246 p.
- 2) Ruiz, C. y Peebles, F., 1988, Geologia, Distribucion y Genesis de los Yacimientos Metaliferos Chilenos: Fondo Nacional de Desarrollo Científico y Tecnológico, Santiago, 334 p.
- 3) Frutos J. y Pincheira, M., 1986, Fichas Metalogenicas de Yacimientos Minerales Metalicos Chilenos: in Frutos, J., Oyarzun, J., y Pincheira M., eds., Geologia y Recursos Minerales Chilenos, Universidad de Concepcion, Concepcion, p. 841-888.

Boric, et al. (1990) provides an excellent summary of the geology, geochronology, and metallogeny of the II Region and includes a 1:500,000 metallogenic map; it was published during the preparation of this report and was used to update entries. Ruiz and Peebles (1988) includes regional metallogenic observations as well as descriptions of the major mines throughout Chile with insights as to their genesis. Finally, Frutos and Pincheira (1986) list mines, occurrences, and prospects with accompanying maps; the volume includes discussions of regional metallogeny as well as magma geochemistry.

Other published articles as well as unpublished government and industrial reports are included in entries where applicable.

EXPLANATION OF DATA FIELDS

Site Name

Reported name at time of record preparation. Prospects often carry the name of a local geographical feature. (Synonymous names can be accessed through MRDS computer database).

District Name

District to which site belongs.

Latitude/Longitude

Reported in degrees-minutes-seconds and are typically accurate to the nearest one-tenth minute. (Discrepancies amongst references are generally reported in MRDS).

Region

Current largest geographical division.

Province

Current geographical division after Region.

Commodities

Generally includes all metals encountered at a site, the first entry usually being the most important commodity. Abbreviations are as follows:

Ag - Silver	Mo - Molybdenum
As - Arsenic	Ni - Nickel
Au - Gold	P - Phosphorous
Co - Cobalt	Pb - Lead
Cu - Copper	Sb - Antimony
Fe - Iron	Sn - Tin
Hg - Mercury	Ti - Titanium
Mn - Manganese	W - Tungsten
	Zn - Zinc

Deposit Type

Since most of the deposits were not visited by the author, the descriptions of many mines were difficult to classify according to Cox and Singer (1986). Thus, for simplicity, the following categorizations were employed:

- 1) Vein - metal-bearing quartz body, either continuous or discontinuous, e.g., shoot, lode.
- 2) Fracture Fill - aerially restricted whereby fractures host mineralization; an ore shoot or lode.
- 3) Stratabound - mineralization hosted by stratified sequence but not necessarily parallel to bedding.
- 4) Stratiform - mineralization hosted by stratified sequence and clearly parallel to bedding.

- 5) Manto - a flat, lenticular or tabular body; this classification was used when the information gleaned on a deposit was not sufficient to classify it under another category.
- 6) Porphyry Cu - copper mineralization is disseminated and/or hosted by anastomosing veinlets.
- 7) Stockwork - used with mineralization other than copper whereby anastomosing veinlets host metals.
- 8) Breccia (Pipe) - host rock is brecciated and not confined to a structural feature, but no implication is intended with respect to whether mineralization is hosted by matrix and/or clasts.
- 9) Skarn - mineralization where garnet+/-pyroxene are constituents of the gangue.
- 10) Replacement - host rock has been contact-metamorphosed; in many cases equivalent to a contact metasomatic deposit.
- 11) Alluvial - Mineralization hosted by fluvial consolidated clastics either as a cement, impregnations, fracture fillings, or replacement.
- 12) Placer - concentrations in unconsolidated sediments.
- 13) Lava Flow - mineralization a constituent of an extrusive magma.

Deposit Size

Large (L), Medium (M), or small (S) based on following table (Guild, 1968) (all values are expressed in metric tonnes unless noted); "U" signifies unknown.

COMMODITY	Large	>	Medium	>	Small
Antimony	50,000		5,000		
Cobalt	20,000		1,000		
Copper	1,000,000		50,000		
Gold	500		25		
Iron	100,000,000		5,000,000		
Lead	1,000,000		50,000		
Manganese (tons >40%)	10,000,000		100,000		
Mercury (flasks)	500,000		10,000		
Molybdenum	500,000		5,000		
Nickel	500,000		25,000		
Silver	10,000		500		
Uranium	10,000		100		
Zinc	1,000,000		50,000		

Entries which do not include a commodity are sites, typically prospects, where this information was unavailable.

Production

As in previous entry and "N" signifies no production; a blank entry signifies that the site is a prospect and/or a site where production is unknown.

Host Rock Type

Self-explanatory.

Host Rock Age

Abbreviations are as follows:

QUAT	Quaternary
HOLO	Holocene
PLEIS	Pleistocene
TERT	Tertiary
PLIO	Pliocene
MIO	Miocene
OLIGO	Oligocene
EO	Eocene
PALEO	Paleocene
CRET	Cretaceous
PERM	Permian
PENN	Pennsylvanian
MISS	Mississippian
DEV	Devonian
SIL	Silurian
ORD	Ordovician
PAL	Paleozoic
E	early
L	late
