

EXPLANATION
Some of the 2009 wells plotted may have only penetrated rocks identified as undifferentiated lowest Triassic and upper Permian. The wells plotted may have had gas or oil shows but were not economical to produce at the time they were drilled. The dry (nonproducing) well data was derived from Petroleum Information's Well History Control System files current to approximately June 1991.

NONPRODUCING WELLS IN THE UNITED STATES THAT PENETRATED ROCKS OF PERMIAN AGE OR OLDER WITH TOTAL DEPTHS GREATER THAN 14,999 FEET
