Index of Stations—Surface-Water Data-Collection Network of Texas, September 1993

Compiled by S.C. Gandara and R.E. Jones

INTRODUCTION

The U.S. Geological Survey's investigations of the water resources of Texas are conducted in cooperation with the Texas Water Development Board, river authorities, cities, counties, U.S. Army Corps of Engineers, Bureau of Reclamation, International Boundary and Water Commission, and others.

Investigations are under the general direction of R.O. Hawkinson, District Chief, Texas District. The address of the Texas District office is 8011 Cameron Road, Austin, TX 78754.

Information regarding hydrologic data collected within their respective areas may be obtained from the Subdistrict or Field offices listed below:

M.E. Dorsey, Chief
Field Headquarters
U.S. Geological Survey, WRD
8011 Cameron Road
Austin, TX 78754

H.C. McWreath, Subdistrict Chief
U.S. Geological Survey, WRD
P.O. Box 6976; Ft. Worth Federal Center
Bldg. 3, South End, 501 West Felix
Fort Worth, TX 76115

J.D. Broadus, Subdistrict Chief
U.S. Geological Survey, WRD
2320 La Branch Street, Rm. 1112
Houston, TX 77004

W.H. Martin, Chief
Field Headquarters
U.S. Geological Survey, WRD
1409 Knickerbocker Road
San Angelo, TX 76904

G.B. Ozuna, Subdistrict Chief
U.S. Geological Survey, WRD
435 Isom Road
North Plaza, Suite 234
San Antonio, TX 78216

Stanley Baldys, Chief
Field Headquarters
U.S. Geological Survey, WRD
1000 Lamar St., Rm. 318–320 Fed. Bldg.
Wichita Falls, TX 76301

As of September 30, 1993, the surface-water data-collection network of Texas (table 1 at end of the report) included 342 continuous-recording streamflow stations (D), 36 gage-height record only stations (G), 18 crest-stage partial-record stations (C), 62 flood-hydrograph partial-record stations (H), 28 low-flow partial-record stations (L), 2 continuous-recording temperature stations (M1), 12 continuous-recording temperature and conductivity stations (M2), 5 continuous-recording temperature, conductivity, and dissolved oxygen stations (M3), 20 continuous-recording temperature, conductivity, dissolved oxygen, and pH stations (M4), 23 daily chemical-quality stations (Q), 158 periodic chemical-quality stations (Qp), 20 lake surveys for water quality (Qs), and 75 continuous or daily reservoir-content stations (R). Plate 1 shows the location of the stations listed in table 1.

Table 1 shows the station number and name, latitude and longitude, type of station, and the office principally responsible for collection of the data. An 8-digit permanent numerical designation for all gaging stations has been adopted on a nationwide basis; stations are numbered and listed in downstream order. In the downstream direction along the main stem, all stations on a tributary entering between two main-stem stations are listed between them. A similar order is followed in listing stations by first rank, second rank, and other ranks of tributaries. The rank of any tributary

with respect to the stream to which it is an immediate tributary is indicated by an indentation in the table. Each indentation represents one rank. This downstream order and system of indentation shows which gaging stations are on tributaries between any two stations on a main stem and the rank of the tributary on which each gaging station is situated.

DEFINITION OF STATIONS

Continuous-recording streamflow station is a station at which a permanent gage is maintained from which a continuous record of stage is obtained. Measurements of flow are made to develop a stage-discharge relation. Discharge records, showing the daily mean discharge and peak discharges for the major floods of each year, and total monthly and yearly runoff expressed in inches and (or) acre-feet, are computed, compiled, and published on the basis of the water year ending September 30.

Gage-height record only station is a site where only the water-surface elevation referred to some arbitrary gage datum, usually mean sea level, is collected.

Partial-record station is a site where limited streamflow data are collected systematically over a period of years. Frequency of sampling is usually less than quarterly. Because the number of streams for which information is desired far exceeds the number of stations feasible to operate for continuous record, the U.S. Geological Survey collects limited streamflow data at other stream-gaging sites. The three basic types of partial-record stations are:

Crest-stage partial-record station is operated for the purpose of defining annual maximum stages and discharges.

Flood-hydrograph partial-record station is operated for the purpose of defining stages and maximum discharge during floods.

Low-flow partial-record station is operated for the purpose of defining annual minimum discharges. Discharge measurements at low-flow partial-record stations usually are made during periods of base flow, when streamflow primarily is from aquifers.

Continuous-recording one-, two-, three-, or four-parameter water-quality stations are water-quality stations at which continuous records of temperature, specific conductance, dissolved oxygen, and (or) pH are obtained by a water-quality monitor. For each of these stations where discharge records are available, discharge-weighted-average concentrations and loads of selected chemical constituents are computed using the continuous record of specific conductance and

regression relation between each chemical constituent and specific conductance.

Daily chemical-quality station is a water-quality station at which samples are collected and specific conductance and water temperature are measured once daily or more frequently. For each of these stations where discharge records are available, discharge-weighted-average concentrations and loads of selected chemical constituents are computed using the daily record of specific conductance and regression relation between each chemical constituent and specific conductance.

Periodic chemical-quality station is a water-quality station where samples are collected periodically (usually from 2 to 10 samples per year) for the analysis of major inorganic constituents and related properties. Most of these stations are operated in conjunction with a stream-gaging station. An attempt is made to collect samples over as wide a range in discharge as possible. Some of these stations are equipped with stage-activated automatic samplers to facilitate the collection of several samples during periods of storm runoff. Samples from stations on reservoirs usually are collected seasonally during comprehensive lake surveys.

Lake surveys are a comprehensive water-quality data-collection program on selected reservoirs in the State. Each reservoir will have three or more primary sites and any number of secondary sites. Field measurements of temperature, specific conductance, dissolved oxygen, and pH are made at 5- or 10-foot depth intervals at each primary and secondary site. In addition, major inorganic constituents, nutrients, and selected trace elements are collected from near the surface and near the bottom of all primary sites. During periods of thermal stratification, additional nutrient samples and samples for the determination of dissolved iron and dissolved manganese are collected just above and below the thermocline of primary sites.

Continuous or daily reservoir-content station is a station at which a daily record of stage is obtained from which a daily value of content (usually at 2400 hours) is computed, compiled, and published.

AVAILABILITY OF DATA

Most of the information and data collected for the various types of stations defined above are computed, printed, and released in an annual publication, "Water Resources Data Texas Volume 1. Arkansas River Basin, Red River Basin, Sabine River Basin, Neches River Basin, Trinity River Basin, and Intervening Coastal Basins;" "Water Resources Data Texas Volume 2. San Jacinto River Basin, Brazos River Basin, San Bernard River Basin, and Intervening Coastal

Basins;” and “Water Resources Data Texas Volume 3. Colorado River Basin, Lavaca River Basin, Guadalupe River Basin, Nueces River Basin, Rio Grande Basin, and Intervening Coastal Basins.” These volumes are for limited distribution and are published primarily for the rapid release of data shortly after the end of the water year. Copies can be purchased from the U.S. Geological Survey, ESIC, Open-File Reports Section, Box 25286, Mail Stop 517, Federal Center, Denver, CO 80225-0046.

The International Boundary and Water Commission, United States and Mexico, operates most streamflow and some chemical-quality stations on the Rio Grande and near the mouths of its principal tributaries at and below El Paso, Texas. Discharge records collected at these stations are published by the Commission in annual bulletins and are available on request from the International Boundary and Water Commission, United States Section, Commons Building C, Suite 310, 4171 N. Mesa, El Paso, TX 79902. Some quality-of-water samples are collected by the International Boundary and Water Commission and analyzed

by the U.S. Geological Survey. These records are published by the Survey in the annual series of Water Resources Data for Texas.

In addition to hydrologic information collected at established gaging stations, measurements of streamflow and water-quality data have been obtained for specific purposes at other locations in the State. Many of these measurements show the peak discharge for unusual floods; others show minimum flows or channel losses, gains, and change in water quality in various stream reaches.

Water-supply papers and other reports containing detailed information on flood discharges, rainfall intensities, hydrology of small watersheds, pollution by naturally occurring saltwater, and other related data have been prepared by the U.S. Geological Survey. In addition to published reports, records not yet published and file copies of special reports on floods and other investigations are available for examination in the District, Subdistrict, and Field offices (see p. 1) of the U.S. Geological Survey in Texas.

Table 1. Streamflow, quality, reservoir-content, and partial-record stations maintained by the U.S. Geological Survey in cooperation with State and Federal agencies, September 1993

		Type of station				
D	Continuous-recording streamflow station.	M3	Continuous-recording temperature, conductivity, and dissolved oxygen station.			
G	Gage-height record only station.	M4	Continuous-recording temperature, conductivity, dissolved oxygen, and pH station.			
C	Crest-stage partial-record station.	Q	Daily chemical-quality station.			
H	Flood-hydrograph partial-record station.	Qp	Periodic chemical-quality station.			
L	Low-flow partial-record station.	Qs	Lake surveys for water quality.			
M1	Continuous-recording temperature station.	R	Continuous or daily reservoir-content station.			
M2	Continuous-recording temperature and conductivity station.

NUECES RIVER BASIN						
Nueces River:						
08190000	Nueces River at Laguna, Tex.	29°25'42"	99°59'49"	538	DQp	San Antonio
08190500	West Nueces River near Brackettville, Tex.	29°28'21"	100°14'10"	539	D	San Antonio
08192000	Nueces River below Uvalde, Tex.	29°07'25"	99°53'40"	540	D	San Antonio
08193000	Nueces River near Asherton, Tex.	28°30'00"	99°40'54"	541	D	San Antonio
08194000	Nueces River at Cotulla, Tex.	28°25'34"	99°14'23"	542	D	San Antonio
08194200	San Casimiro Creek near Freer, Tex.	27°57'53"	98°58'00"	543	D	San Antonio
08194500	Nueces River near Tilden, Tex.	28°18'31"	98°33'25"	544	D	San Antonio
08195000	Frio River at Concan, Tex.	29°29'18"	99°42'16"	545	DQp	San Antonio
08196000	Dry Frio River near Reagan Wells, Tex.	29°30'16"	99°46'52"	546	DQp	San Antonio
08197500	Frio River below Dry Frio River near Uvalde, Tex.	29°14'44"	99°40'27"	547	D	San Antonio
08198000	Sabinal River near Sabinal, Tex.	29°29'27"	99°29'33"	548	DQp	San Antonio
08198500	Sabinal River at Sabinal, Tex.	29°18'05"	99°28'46"	549	D	San Antonio
08200000	Hondo Creek near Tarpley, Tex.	29°34'10"	99°14'47"	550	DQp	San Antonio
08200700	Hondo Creek at King Waterhole near Hondo, Tex.	29°23'26"	99°09'04"	551	D	San Antonio
Verde Creek:						
08200980	Middle Verde Creek Reservoir Inflow near Hondo, Tex.	29°30'38"	99°05'25"	552	D	San Antonio
08200990	Middle Verde Creek Reservoir near Hondo, Tex.	29°30'12"	99°05'55"	553	R	San Antonio
08201000	Middle Verde Creek Reservoir Outflow near Hondo, Tex.	29°30'05"	99°06'30"	554	D	San Antonio
08201500	Seco Creek at Miller Ranch near Utopia, Tex.	29°34'23"	99°24'10"	555	DQp	San Antonio
08202450	Seco Creek Reservoir Inflow near Utopia, Tex.	29°13'40"	99°23'42"	556	DQp	San Antonio
08202470	Seco Creek Reservoir near Utopia, Tex.	29°31'01"	99°23'51"	557	R	San Antonio
08202490	Seco Creek Reservoir Outflow near Utopia, Tex.	29°30'58"	99°23'51"	558	D	San Antonio
08202700	Seco Creek at Rowe Ranch near D'Hanis, Tex.	29°21'43"	99°17'05"	559	DQp	San Antonio
08202790	Parkers Creek Reservoir Inflow near D'Hanis, Tex.	29°27'27"	99°15'16"	560	DQp	San Antonio
Hondo Creek:						
08202800	Parkers Creek Reservoir near D'Hanis, Tex.	29°26'42"	99°15'09"	561	R	San Antonio
08202810	Parkers Creek Reservoir Outflow near D'Hanis, Tex.	29°26'38"	99°15'09"	562	D	San Antonio
08202900	Seco Creek near Yancey, Tex.	29°08'03"	99°12'19"	563	DQp	San Antonio
Leona River:						
08204000	Leona River springflow near Uvalde, Tex.	29°09'15"	99°44'35"	564	L	San Antonio
08205500	Frio River near Derby, Tex.	28°44'11"	99°08'40"	565	D	San Antonio
08206600	Frio River at Tilden, Tex.	28°28'02"	98°32'50"	566	D	San Antonio
08206700	San Miguel Creek near Tilden, Tex.	28°35'14"	98°32'44"	567	D	San Antonio
08206900	Choke Canyon Reservoir near Three Rivers, Tex.	28°29'01"	98°14'44"	568	R	San Antonio
08206910	Choke Canyon Reservoir (Outflow Works Channel) near Three Rivers, Tex.	28°29'09"	98°14'29"	569	D	San Antonio

Footnotes at end of table.

Table 1. Streamflow, quality, reservoir-content, and partial-record stations maintained by the U.S. Geological Survey in cooperation with State and Federal agencies, September 1993—Continued

Permanent station number	Station name	Latitude and longitude	Number on plate 1	Type of station	Location of record ¹
NUECES RIVER BASIN—Continued					
Nueces River:—Continued					
Frio River:					
Atascosa River:					
08207220	Rutledge Hollow Creek at 7th Street, Poteet, Tex.	29°02'07" 98°34'18"	570	C	San Antonio
08207300	Atascosa River at Pleasanton, Tex.	28°57'44" 98°28'51"	571	C	San Antonio
08208000	Atascosa River at Whitsett, Tex.	28°37'19" 98°16'52"	572	D	San Antonio
08210000	Nueces River near Three Rivers, Tex.	28°25'38" 98°10'40"	573	DQp	San Antonio
08210500	Lake Corpus Christi near Mathis, Tex.	28°02'17" 97°52'15"	574	R	San Antonio
08211000	Nueces River near Mathis, Tex.	28°02'17" 97°51'36"	575	D	San Antonio
08211200	Nueces River above Calallen, Tex.	27°56'15" 97°46'32"	576	D	San Antonio
08211500	Nueces River at Calallen, Tex.	27°52'34" 97°37'32"	577	D	San Antonio
OSO CREEK BASIN					
08211520	Oso Creek at Corpus Christi, Tex.	27°42'40" 97°30'06"	578	D	San Antonio
SAN FERNANDO CREEK BASIN					
San Diego Creek:					
08212300	Tranquitas Creek at Kingsville, Tex.	27°31'33" 97°52'02"	579	C	San Antonio
RIO GRANDE BASIN					
08364000	Rio Grande near El Paso, Tex.	31°48'10" 106°32'25"	580	Qp	(²)
08377200	Rio Grande at Foster Ranch near Langtry, Tex.	29°46'50" 101°45'20"	581	Qp	San Angelo
08407500	Pecos River at Red Bluff, N. Mex.	32°04'30" 104°02'21"	582	D	(²)
08408500	Delaware River near Red Bluff, N. Mex.	32°01'23" 104°03'15"	583	D	(²)
08410000	Red Bluff Reservoir near Orla, Tex.	31°54'04" 103°54'35"	584	R	(²)
08412500	Pecos River near Orla, Tex.	31°52'21" 103°49'52"	585	DQ	(²)
Toyah Creek:					
08425500	Phantom Lake Spring near Toyahvale, Tex.	30°56'01" 103°50'43"	586	L	San Angelo
08427000	Giffin Springs at Toyahvale, Tex.	30°56'51" 103°47'19"	587	L	San Angelo
08446500	Pecos River near Girvin, Tex.	31°06'47" 102°25'02"	588	D	San Angelo
08447410	Pecos River near Langtry, Tex.	29°48'10" 101°26'45"	589	Qp	San Angelo
08449400	Devils River at Pafford Crossing near Comstock, Tex.	29°40'35" 101°00'00"	590	Qp	San Angelo
08450900	Rio Grande below Amistad Dam near Del Rio, Tex.	29°25'00" 101°02'00"	591	Qp	I.B.W.C.
Las Moras Creek:					
08456300	Las Moras Springs at Brackettville, Tex.	29°18'33" 100°25'13"	592	L	I.B.W.C.
08459000	Rio Grande at Laredo, Tex.	27°29'45" 99°29'25"	593	Qp	I.B.W.C.
08461200	International Falcon Reservoir near Falcon Heights, Tex.	26°33'25" 99°10'05"	594	R	I.B.W.C.
08461300	Rio Grande below Falcon Dam, Tex.	26°33'25" 99°10'05"	595	Qp	I.B.W.C.
08464700	Rio Grande at Fort Ringgold, Rio Grande City, Tex.	26°22'05" 98°48'20"	596	Qp	I.B.W.C.
08466300	Rio Grande near Los Ebanos, Tex.	26°14'15" 98°33'50"	597	Qp	I.B.W.C.
08469200	Rio Grande below Anzalduas Dam, Tex.	26°08'00" 98°20'05"	598	Qp	I.B.W.C.
08470400	Arroyo Colorado at Harlingen, Tex.	26°10'20" 97°41'55"	599	Qp	San Antonio
08475000	Rio Grande at Brownsville, Tex.	25°52'35" 97°27'15"	600	Qp	San Antonio

¹ Quality-of-water records are filed at the District Office in Austin, Texas.

² Records are furnished by adjacent U.S. Geological Survey District offices.

³ Discharge and/or reservoir-content records are furnished by the U.S. Army Corps of Engineers.
