

# Preliminary Merged Aeromagnetic Map of Southwest Washington

The data were projected with a Lambert Conformal conic projection on a central meridian of 120° 50' W and standard parallels of 39° N and 45° N. Individual magnetic surveys (Hill, 1991) with the appropriate IGRF removed, were analytically continued to the same 1000 ft. above terrain level and merged. The data were gridded with a 0.5 km spacing and contoured. The contour interval is 100 gammas with bold lines indicating the 500 gamma interval. State boundaries are also plotted.

Hill, Patricia L., 1991, Bibliographies and location maps of publications on aeromagnetic and aeroradiometric surveys for the states west of approximately 106° longitude (exclusive of Alaska and Hawaii): U. S. Geological Survey Open-File Report 91-370-A, p. 135-155.

This report is preliminary and has not been reviewed for conformity with USGS editorial standards. Opinions and conclusions expressed herein do not necessarily represent those of the USGS. Any use of trade, product, or firm names is for descriptive purposes only and does not imply endorsement by the USGS.
