CONTENTS

A Selected Bibliography of Water Related Research in the Upper Klamath Basin, Oregon

By Dorie L. Brownell *and* Mia R. Rinallo

Abstract

A bibliography containing 165 selected references was compiled to assist local, State and Federal agencies that have ongoing water-related research interests in the Upper Klamath Basin. The report has two parts. Part I is a list of bibliographic citations alphabetized by author, and Part II is a subject index that references bibliographic entries. Categories of the subject index include chemistry, ecology, geology, hydrology, land use, and non-interpretive reports. Maps, reports, proposals, theses, dissertations, and journal articles are referenced. Some of the environmental issues addressed by references in the bibliography are hypereutrophication, nuisance algal blooms, endangered fish species, water allocation questions, wetland and riparian habitat restoration, and pesticide and fertilizer utilization.

INTRODUCTION

The Upper Klamath Basin encompasses an area of approximately 3,800 square miles and includes Upper Klamath Lake, Agency Lake, and the Williamson, Sprague and Wood River Basins (fig. 1). Over the last century, the Upper Klamath Basin has been a focal point of many major environmental issues, such as eutrophication in Upper Klamath Lake, nuisance algal blooms, the distribution of water supplies, the regulation of lake levels, endangered fish species, wetland and riparian habitat restoration, and the effects of applying pesticides and fertilizers. In attempt to address environmental concerns and to develop sound management strategies, State and Federal agencies, in cooperation with the private sector, have combined their resources to study different aspects of the lake and its surrounding basin. Participating agencies and institutions include the following: Klamath Tribe, Bureau of Reclamation (Klamath Falls, Oregon and Denver, Colorado), Oregon State University (Corvallis, Oregon), Humbolt State University (Humbolt, California), U.S Geological Survey (Portland, Oregon and Sacramento, California), U.S. Fish and Wildlife Service and individual graduate studies. Studies by these agencies and institutions have resulted in a multitude of research papers, reports, journal articles, theses, dissertations, and project proposals.

The purpose of this report is to present a bibliography of selected references that have a particular relevance to water-related aspects of the Upper Klamath Basin. The bibliography is not intended to be a complete list of references, but it contains published reports considered important to understanding the water resources of the basin.

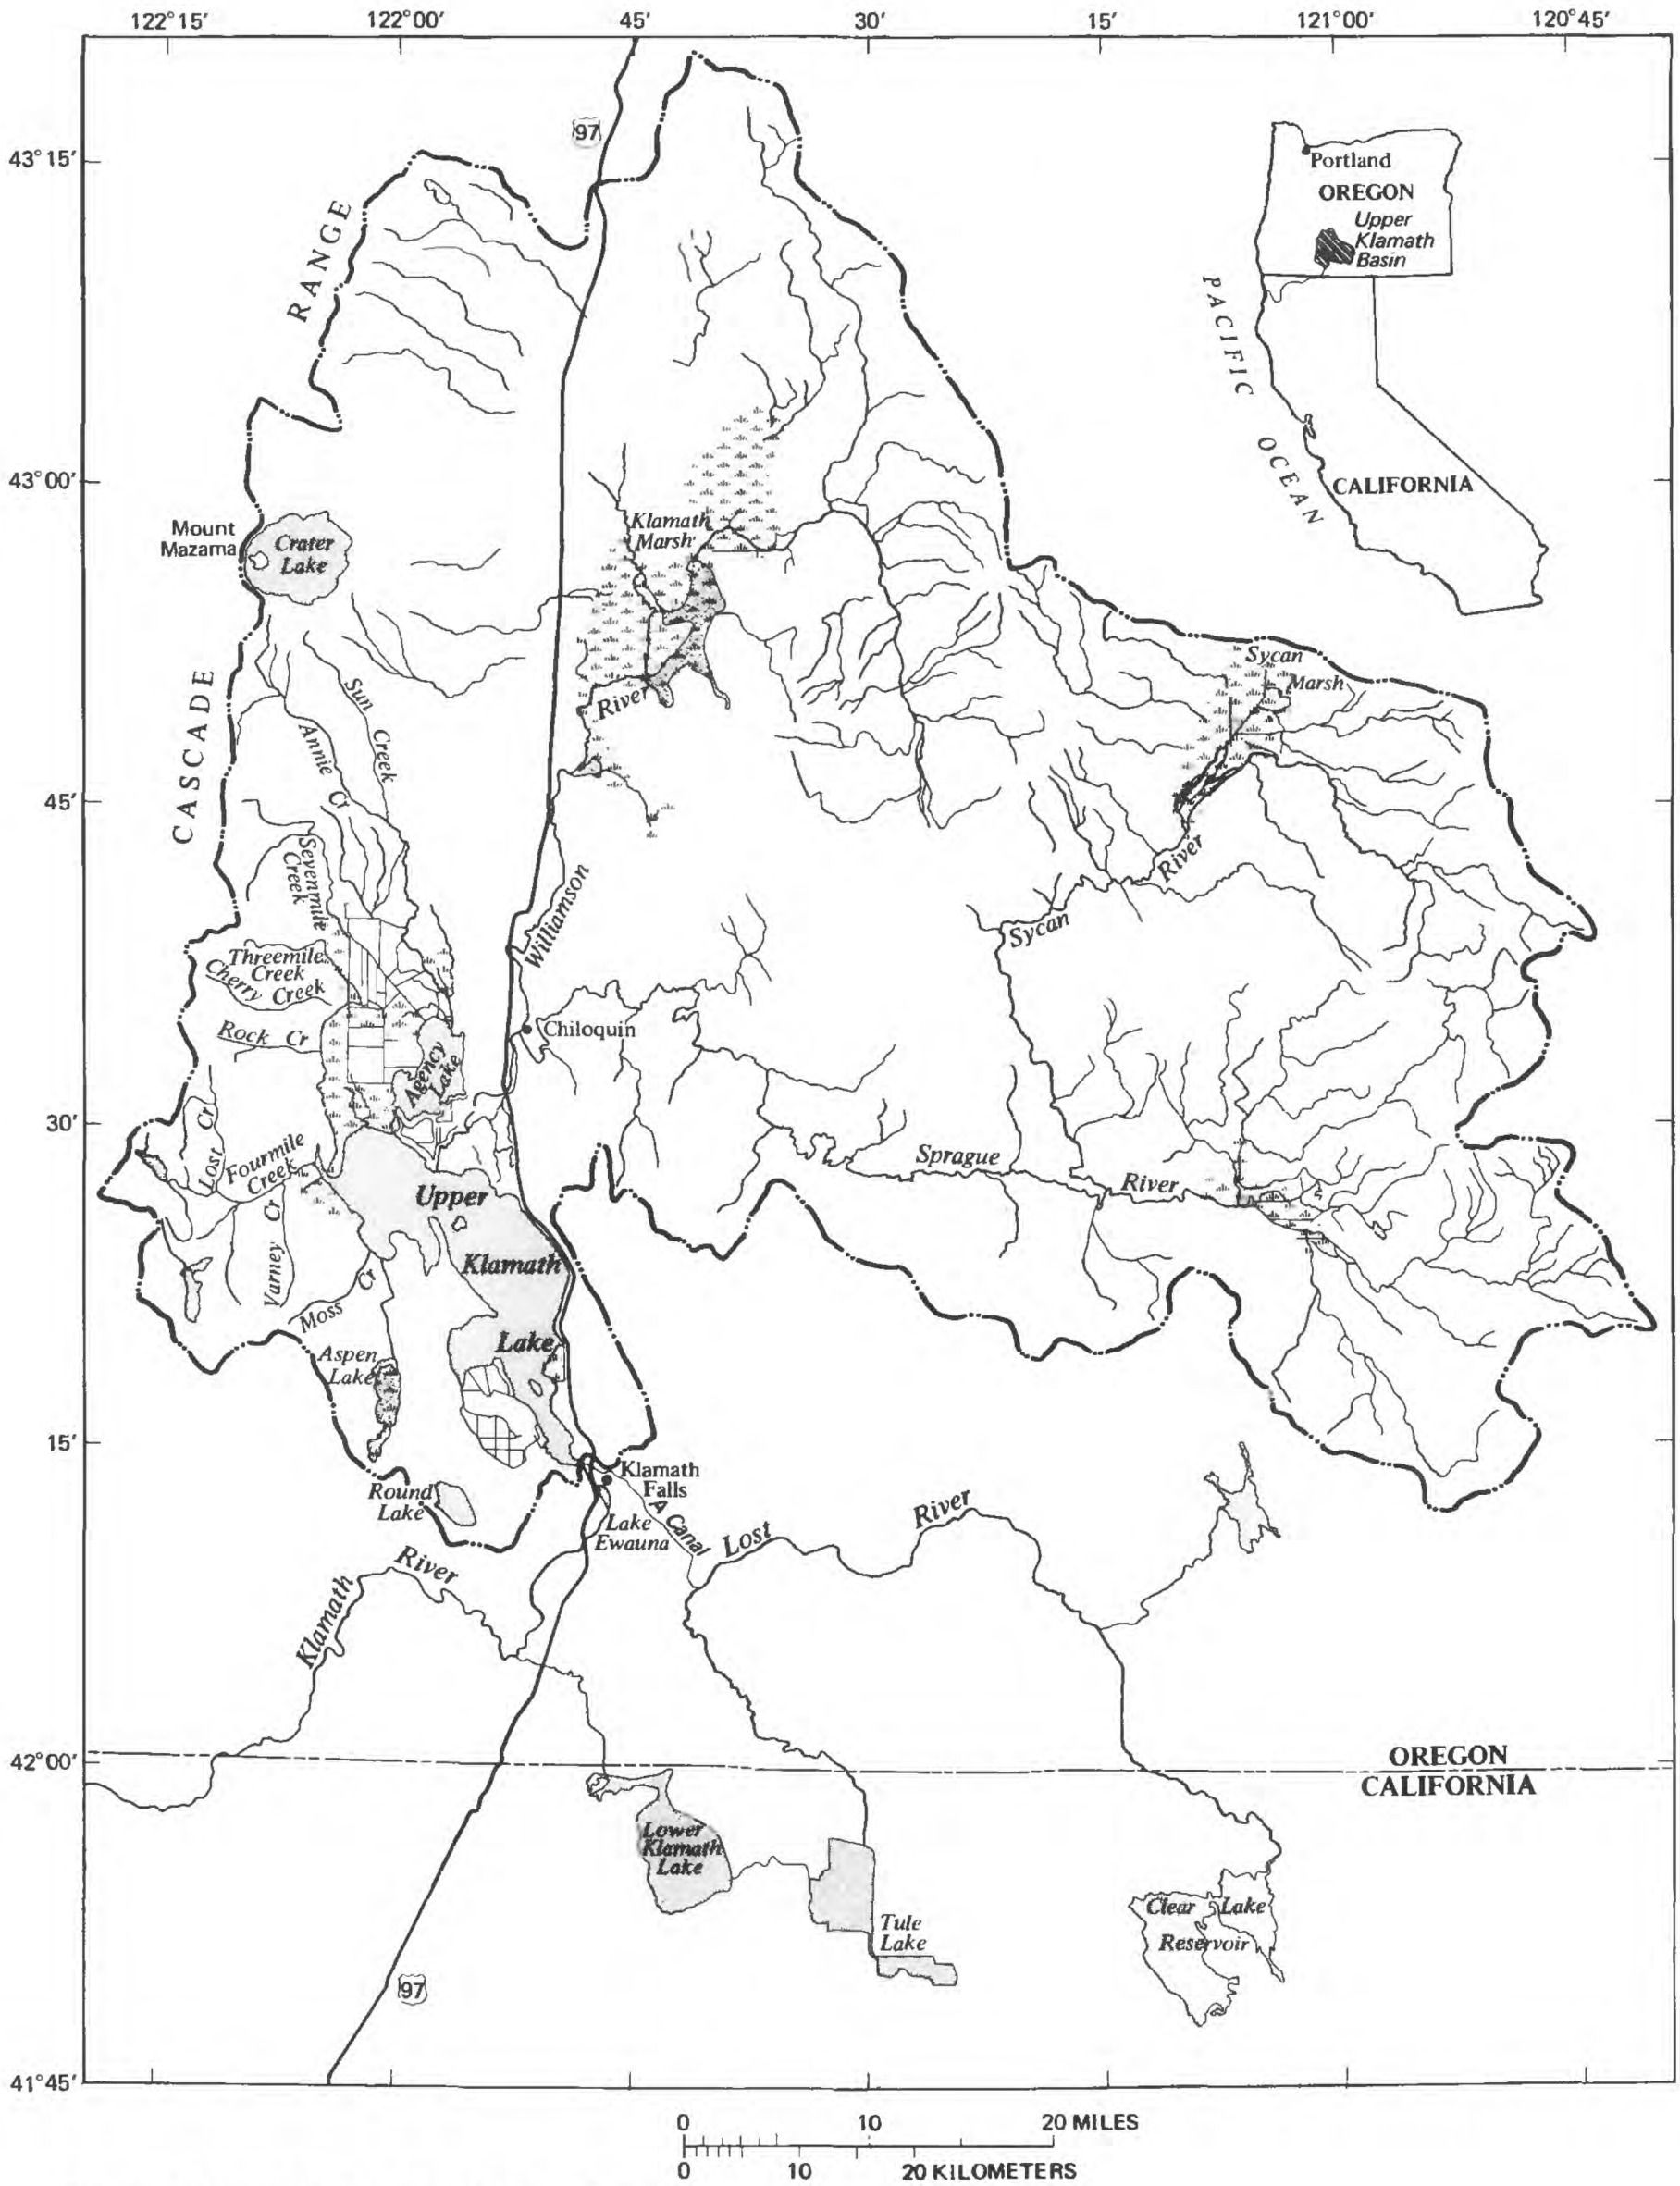

Figure 1. Upper Klamath Lake Basin and vicinity.

The bibliography contains 165 selected references compiled from local, State, and Federal agencies; consulting firms; and university libraries. The bibliography has two parts: Part I is a list of bibliographic citations alphabetized by author, and Part II is a subject index that references bibliographic entries. Categories of the subject index are chemistry, ecology, geology, hydrology, land use, and non-interpretive reports. Subject and author lists utilize reference numbers, which are used to cross reference Part I and Part II.

125. Investigation into methods to control algae in the Klamath River Basin
138. Life history and management of four endangered lacustrine suckers
142. Reconnaissance investigation of water quality, bottom sediment, and biota associated with irrigation drainage in the Klamath Basins, California and Oregon, 1988–89

BIBLIOGRAPHY BY SUBJECT (PART II)—Continued

Land Use—Continued

147. Controlled grazing for riparian zone rehabilitation
149. Potential eutrophication control measures for Upper Klamath Lake, Oregon—Data evaluation and experimental design
150. Report on water and related land resources—Klamath drainage basin, Oregon

Non-Interpretive Reports

3. A land use and land cover classification system for use with remote sensor data
6. Reconnaissance report Klamath Basin, Oregon survey study
19. Final eligibility and suitability report for the Upper Klamath Wild and Scenic River Study: Klamath Falls, Oregon
20. Upper Klamath basin draft resource management plan/Environmental Impact Statement: Klamath Falls, Oregon
21. Klamath Project History—Annual Reports
22. Preliminary feasibility report Hanks Marsh Unit, Appendix A—Land classification
23. Upper Klamath Basin, Oregon-California—A comprehensive departmental report on the development of water and related resources
25. Upper Klamath River Basin California—Oregon reconnaissance report
26. Oregon water supply outlook report—Klamath Basin, Klamath watersheds-area 10, 1981
27. Upper Klamath offstream storage study, Klamath Project Oregon
28. Klamath Project fish survey
29. Biological assessment on long-term project operations, February 28, 1992
35. Soils of the Klamath Reservation
36. Oregon's long range requirements for water—General soil map report with irrigable areas, Klamath drainage basin
37. Soil survey of Klamath County, Oregon, southern part
38. Interim report on Klamath River Basin investigation—Water utilization and requirements
39. Water quality control plan for Klamath River Basin
40. Environmental research in the Klamath Basin, Oregon—1991 annual report
41. Environmental research in the Klamath Basin, Oregon—1992 annual report
44. Off-stream storage above Upper Klamath Lake—An overview study for Klamath County
55. In-lake test enclosures and facilities, Upper Klamath Lake restoration study
56. Potential eutrophication control measures for Upper Klamath Lake, Oregon
75. Water budget of Upper Klamath Lake, southwestern Oregon
76. Interim report on the ground water in the Klamath Basin, Oregon
77. Atlas of Oregon lakes
85. The Upper Klamath Lake, EPA–314 Clean Lakes Program 1981 to 1983, Phase 1, Diagnostic and Feasibility Study
87. Long range plan for the Klamath River Basin Conservation Area Fishery Restoration Program, 1991
88. Upper Klamath Basin amendment to the Long Range Plan for the Klamath River Basin Conservation Area Fishery Restoration Program, 1992
90. Laboratory and field quality assurance/quality control plans
94. Literature review of fishes and fisheries of Upper Klamath Lake, Oregon
106. Interim report, Upper Klamath Lake studies, Oregon
111. Water quality control plan for the North Coast Region

BIBLIOGRAPHY BY SUBJECT (PART II)—Continued

Non-Interpretive Reports—Continued

113. Report of the Oregon Klamath River Commission on water resources and requirements of the Upper Klamath Basin
114. Water quality status assessment report, 1988
115. Water quality status assessment report, 1990
116. Interim report on water quality survey of Klamath Basin waters in Oregon, July 1959 to December 1960
117. Interim report on water quality survey of Klamath Basin waters in Oregon, 1961
118. Final report on the quality of Klamath Basin waters in Oregon, July 1959 to December 1963
119. Water quality standards, Klamath River, 1966
120. Investigations of pollution in the Klamath River System, Oregon-California, 1955
121. The Klamath Basin, 1971
122. Bathymetric survey report, Clear Lake Reservoir conveyance channel, Klamath Project, Oregon
123. History and future of the Klamath Reclamation Project
129. The estimation of regional secondary benefits resulting from an improvement in water quality of Upper Klamath Lake
130. Economic benefits from an improvement in water quality
141. Department of Interior irrigation drainage program reconnaissance study of Klamath Basin refuge areas, California and Oregon
148. Klamath River Basin-Oregon, Reconnaissance report
151. Upper Klamath Lake Studies, Oregon
152. Klamath Basin National Wildlife Refuges, 1943
153. Klamath Basin National Wildlife Refuges, 1960
154. Endangered and threatened wildlife and plants—Determination of the endangered status for the shortnose sucker and Lost River sucker
155. Endangered and threatened wildlife and plants; shortnose and Lost River suckers, Houghtons goldenrod and Pitchers thistle Final Rules
156. North American Waterfowl Management Plan—Concept Plan for Waterfowl Habitat Protection, Klamath Basin
157. Lost River (*Deltistes luxatus*) and shortnose (*Chasmistes brevirostris*) sucker recovery plan
161. Use of a floating periphyton sampler for water pollution surveillance
164. The Lost River System—A water quality management investigation
