

EXPLANATION

- 50 ————— POTENTIOMETRIC CONTOUR—Shows altitude at which water level would have stood in tightly cased wells. Hatchures indicate depressions. Contour intervals 5, 10, 20 and 40 feet. Datum is National Geodetic Vertical Datum of 1929 (NGVD of 1929).
- STATE WATER MANAGEMENT DISTRICT BOUNDARY
SRWMD—St. Johns River Water Management District
SRWMD—Suwannee River Water Management District
SFWMD—South Florida Water Management District
SWFMD—Southwest Florida Water Management District
- 33 ————— WELL LOCATION—Number is altitude of water level in feet above or below NGVD of 1929.
- SPRING
- NOTE: The potentiometric contours are generalized to portray synoptically the head in a dynamic hydrologic system taking due account of the variations in hydrologic conditions such as differing depths of wells, noncontemporaneous measurements of water levels, variable effects of pumping, and changing climatic influence. The potentiometric contours thus may not conform exactly with individual measurements of water level.
