

Figure E. -- Coal correlations in the Calico and A-sequences along cross-section C-C'. The cross-section is located in the central part of the Kaiparowits Plateau (fig. B of pl. 1) and trends parallel to paleoshorelines. Drill holes are located by map number on figure A of plate 1 and are identified in appendix 1. The inferred position of the Calico sequence boundary and shoreface strata below the drilled interval are based on stratigraphic studies in Upper Valley (fig. B of plate 1) by Hettinger and others (1994).
