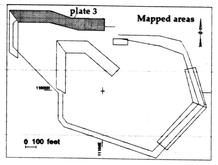
U.S. DEPARTMENT OF THE INTERIOR
U.S. GEOLOGICAL SURVEY



Explanation

Goldstrike stock, grandodiorite, argillically altered

Rodeo Creek unit

- Drc — Rodeo Creek unit, siliceous, bedded argillite
- Brecciated argillite, red, siliceous, sulfidic
- Drcs — Sandstone, and quartzite, white layered to massive, fine-grained, argillically altered
- Drcb — Gouged, deformed siltstone and decalcified limestone, grey, clay-rich, carbonaceous

Phyllonite, old deformation surface, light brown, red to black, pelitic, foliated, gouged siltstone and shale

Popovich Limestone

- Dp — Popovich limestone, massive, white, bedded limestone, and (or) marble
- Dpg — Decalcified Popovich limestone, grey, siltstone
- Dpb — Decalcified, carbonaceous Popovich limestone, black, locally deformed, and phyllonitic
- Dpw — Decalcified, non-carbonaceous Popovich limestone, bedded, locally deformed white to tan
- Breccia, sandy, red to black to grey, massive
- Breccia, siliceous, hard, grey, local stibnite, barite
- Dpc — Cataclasite, pale tan, soft decalcified limestone, siltstone, bedded, deformed, sulfide-rich, local granodiorite/monzonite(?)

- fault breccia
- formlines
- fault gouge and phyllonite
- strike and dip of bedding
- strike and dip of fault or fissure

Scale

0 5 10 m

This report is preliminary and has not been reviewed for conformity with U.S. Geological Survey editorial standards or with the North American Stratigraphic Code. Any use of trade, product, or firm names is for descriptive purposes only and does not imply endorsement by the U.S. Government.

Inclined Geologic Section, North Face (11,600N), 4920 - 4780 Levels, Upper Central Betze Orebody, Goldstrike Mine, Carlin Trend, Eureka Country, Nevada
